> needed.

I don't think it is "needed" to listen. I do think you can use audio processing to make an adequate or unpleasant broadcast signal sound GREAT !!!! Being able to roll over or enhance selected audio frequencies as needed adds enormously to the comfort of broadcast listening. Also... As you know, with strong fade in/out, you also wind up with a lot of volume spikes that can be uncomfortable. Even with a good am synch !!! So... I use audio clipping to set a threshold. That will prevent those nasty audio spikes. Again... Not "needed" but immensely preferable. I also have a ball with various reverb and other advanced audio effects.

Michael

Yeah, tarred and feathered in this news group. The amount of BS posted
in rec.radio.shortwave is huge.

> > The radios specifications just do not support your suppositions.
> > That's the way it is Michael.
>
> No, that isn't the way it is. I've used both radios. I don't need a

> gaining anything for yourself with your fallacious statements.

Same old line of crapola espoused by several posters in the past riddled with inaccurate, unfounded statements.

You are an odd person to say the least to use expressions like "queer for Drake radios." It just means you can't stand on the facts and have to change the argument. Example is I state about the amount of false and misleading statements about the R75 and Drake R8B in the news group and you go to reviews in Passport.

Then you decide that "I'm queer for Drake radios" as an attack instead of sticking to the facts. You are just more of the same old voluminous BS by a few in-duh-vid-uals in the past.

You are so concerned about what I pay for radios. What I spend on radios is a drop in the bucket for me, it's a non-issue, just more BS from you. Besides unlike yourself I look at specifications, reviews from people without an ax to grind and consequently make decision I don't regret.

> > A professional would not pick a Drake R8B or a ICOM 746 pro. He

>
> I think I stated above that a WJ would be the choice of a pro.
> Hypothetically speaking, if pro had to use a consumer radio, he'd
> take something like a 746Pro over an R8 series.

No he wouldn't, he would pick a radio designed for the task and that is not a Drake R8B or a Ham transceiver. Look, when you make dumb statements and then you won't back down from them does not help your credibility, which already suffers due to the tired re-posting the same old crapola about the R75.

You sound as dumb as another thread comparing cheap Chinese portables to much better and costly receivers.

So here is the problem. People subscribe to this news group every day with some expatiation of getting unbiased information on the hobby and your brand of BS does not help them. This viewpoint probably will not penetrate your skull.

That's part of what makes shortwave listening a good hobby. Have you
used the DSP module that goes in the R75. Ever play with that?

Yeah, I hear them on 3215 now. So much for my mental alertness in the early morning hours. I could swear I heard them on 3210 last night though.

Big enough to snap his neck like a chicken's. On the uncut
vids, it's easily stretched a couple of more inches longer. How
far did they drop him?

Apparently, they tied the loops a bit slack, for some reason, maybe
to help the noose snap shut harder. Remember, if a condemned man
survives hanging, you're supposed to let him walk.

There are times I wish I had experience with the better boat anchor
radios and their fine sound reproduction capabilities.

These days, depending on the radio, we have DSP filters that are pretty
darn good in shape factor and adjustability in width. Add to that
passband tuning and side band selectable sync and you have quite a bit
of capability.

Not tarred and feathered by this newsgroup. ATTEMPTED tar and feather job
by a few Drake brand loyalists. Your acting out with no more sense then
drunken red necks at a tractor pull having a fist fight over Ford vs. Chevy.
Don't speak for the newsgroup. Don't speak for anyone other then yourself.
You don't have the brains for it.

>> > The radios specifications just do not support your suppositions.

> BS by a few in-duh-vid-uals in the past.

Imp criticizing you for passing fallacious opinions off as fact with brand
loyalty as your motive and you call it an "attack". Try to keep in mind,
there are many people that come to this newsgroup that know even less then
you do. If that's possible. I hate the idea of one of them eating your BS
up like sweat cream out of want for quality information.

> You are so concerned about what I pay for radios. What I spend on
> radios is a drop in the bucket for me, it's a non-issue, just more BS

> from people without an ax to grind and consequently make decision I
> don't regret.

I could care less about what you pay for your radio's or any other products
that you enjoy. Im pointing out that in the case of the R75 vs. the R8
series, the retail cost of each radio in comparison to each other isn't
proportional to the respective performance of each radio. Quite the
contrary. And please don't boast about your financial prowess. It makes you
appear wanting.

Read above where I said a pro would take a "WJ". Then... read the word
"hypothetically" as it relates to my statement regarding the 746Pro.
Cognitive thinking doesn't seem to be your strong point.

> You sound as dumb as another thread comparing cheap Chinese portables
> to much better and costly receivers.
>

I'm not a fan of Chinese consumer electronics at this point, but I see
nothing wrong with making comparisons. Making a comparison between radios
is not an attempt to equate the performance of a lesser radio to a better
one. Only a proven half wit could come up with that argument.

Michael

>
> --

Yes.. I have the DSP in my R75. The notch filter isn't really all to
helpful. It comes in handy from time to time with a het, but it isn't a
miracle worker. The noise reduction feature is more of a help. It can be
set from 1 to 15. It is very good on settings from 1 to 3. Perfect for
getting rid of a hiss. If you pump it up further then 6 you tend to get a
very flat and muffled audio. Go above 8 and you begin to get a warble. Go
above 10 and it sounds like Charlie Brow's teacher :-)

I recall hearing them shift frequency from 3210 to 3215 one night and
wondered why they bothered. Possibly interfering with fishboats or
something.

Now that was funny. I can just imagine someone sounding like a grownup on a Charlie Brown cartoon coming from the radio speaker.

Noise reduction is the best thing. I thought the notch filter was suppose to eliminate more than one heterodyne at a time and even better it would track but it has been a while since I have looked at the specifications.

Hi. I recently posted that I heard an interesting station at 2305.
Many replied and told me it was an image of WCCR at 3215. I checked
and indeed, the 2305 broadcast was much clearer at 3215. What does it
mean when you get an image? How do you know if it's an image or the
actual station broadcasting at its frequency? Does getting an image
indicate that you have a lesser quality radio? I have a 7600GR.

An image, in most cases, is a signal being received on the wrong side of the
local oscillator frequency, in reference to the IF frequency. In this case,
you were receiving the signal on the low side of the local oscillator, when
it is meant to be received on the high side.

Basic heterodyne explanation:

This is the proper math.

Local Oscillator= 3670 KHz
Incoming signal = 3215 KHz
IF Frequency= 455 KHz

Your radio was doing it like this:

Incoming signal= 3215 KHz
Local Oscillator= 2760 KHz
IF Frequency= 455 KHz

I know my explanation is far from clear.. perhaps someone can put my math
into plain English for you.

No way. The R75 proponents sink on their own arguments. No need to bring in their opponents. Speaking for myself I own four bands of radios not just Drake so labeling me a "Drake loyalist" falls flat on its face.

As for acting out I act out against BS posts for the benefit of people trying to get unbiased information from the news group. Another derogatory remark from you about red necks and tractor pulls is just another lame attempt to change the subject. I'm not the problem here you are. I'm being being objective and you are not.

" You don't have the brains for it. " As yet another attack on me rather than sick to the subject you characterize my post as speaking for the news group.

So lets tally up your remarks.

1. Attack Telamon as a Drake loyalist.
2. Attack Telamon as a red neck.
3. Attack Telamon as speaking for the news group.
4. Attack Telamon for being unintelligent.

Attacks on Telamon 4. Facts in support of your exceeding weak and untenable position 0. Lousy record.

I'm not loyal to some band as you try to unsuccessfully portray me. The
attacks on the messenger don't work. People will see through the
fallacies you portray. I don't have to do anything other then point them
out.

You are stuck on Drake vs ICOM but I'm not. Your also stuck on something
else I won't mention. This argument isn't about me either it's about the
fallacious claims made about the R75. And I'm posting BS - SHOW ME WHERE.
Just another attack on me. No factual information in support of your
contentions on the R75.

> > You are so concerned about what I pay for radios. What I spend on

Excuse me and I quote:
"I can understand how upsetting and embarrassing it is to have an
$1,800.00 + radio outperformed for dx'ing and utility by a $500 radio. "

I actually pay attention to what you post and answer your objections.
Don't give me this crap about you could care less about what I pay for
radios, I'm answering your argument not boasting about myself. Stop
changing the subject. This is attack number 5 on me instead of
supporting your position on the R75.

> >> > A professional would not pick a Drake R8B or a ICOM 746 pro. He

Yeah I read where you want to lead someone to yet another untenable
position.

> > You sound as dumb as another thread comparing cheap Chinese portables
> > to much better and costly receivers.
> >
>
> I'm not a fan of Chinese consumer electronics at this point, but I see
> nothing wrong with making comparisons. Making a comparison between radios
> is not an attempt to equate the performance of a lesser radio to a better
> one. Only a proven half wit could come up with that argument.

Well, what can I say to that. Nothing.

To sum up your reply
0 fact to support your position on the R75
6 attacks on Telamon
2 other diversive comments to muddy your posts points.

How sad. Apparently you have no defense on what you post about the R75.
It's all about me or some BS instead.

Hi. I'm looking for a good, brand new shortwave radio with a built in AM Ferrite antenna and a synch detector. Is there anything else out there beside the 7600GR that has these features?

My point is this... I've used both radios. The R75 is better for DX'ing.
In this case, spec sheets are useless. I'm not going to reduce this to the
level of the statistician. The R75 in my experience is more sensitive, and
even more importantly, more capable for dealing with DX. The twin PBT is
unbeatable by the R8. In this case, comparing the vital statistics of both
radios stated on speck sheets is worthless. And as far as attacks go,
you've made a few of them on me too. Another shot to my mid section.
Ohhhhh.... My Spleeeeen !!!!

Again.... Pardon me for being crude... But in this case... For this
comparison, you can wipe your ass with spec. sheets. Really..... Im talking
practical hands on time with both radios. I know what the hell the specs
are and it would be a useless exercise for me to post links to bench marks.

>> > You are so concerned about what I pay for radios. What I spend on

You consider all my deserved contradictions of your baseless positions as
"attacks". Let me be as simple as I can.... Once again... Im not going to
be a bore and post bench maks. I would not remind you of what you already
know so well. I've used both radios. The R75 is a better DX'ing rig. Get
it through your head. The R75 is simply better for resolving very poor
signals.

You need to spend more time doing hands on work with both radios.
Honestly... A little more hands on and a little less sophistry. No personal
attack intended.

Michael

I don't have an R75, but I can tell you about the R8.

The Drake R8B is an excellent LW performer. It's given me many distant beacons, including Coral Harbour in Canada's NWT up near the Arctic Circle. If you plan on DXing trans-Atlantic (or Pacific) LW broadcast stations, the R8B's excellent synch detector is a big plus. The R8's noise blanker is one of the best. The Ten-Tec RX340, JRC NRD-545, and Drake R7A are also an excellent LW radios with very good LW sensitivity.

But keep in mind you won't hear squat on LW if you have a crappy antenna and/or horrendous noise level, regardless of the radio you use.

And a very Happy New Year to you to Steve and all at r.r.s from the Southern tip of Africa.
May the good DX waft in and may the QSL's return super quick from those few exotic countries you still do not have like Isla da Pascua.

My cousin and his wife are visiting, but last nights celebrations were a bit muted as his wife got an attack of asthma.
It's five a.m. now and the sun is just rising on what looks to be a lovely sunny summers day

Before I would buy any new radio I would haunt the thrift shops and
look for an used stereo receiver with speakers.

Many of them were optimized for AM/FM, set up to drive REAL speakers
and many have impressive equalizers in them.

At the prices of $10-20 for cutting edge technology of the last decade,
it is the best bargain for AM/FM listening if you don't need
portability.

>
> I know my explanation is far from clear.. perhaps someone can put my math
> into plain English for you.

Lets say the IF is 455 KHz and the LO is 455 KHz higher than the station
to be received so then if the radio is tuned to 2305:
station 2305
LO 2760
Difference 455
sum 5065

When two frequencies mix the 2nd image products are the difference and
the sum. In radio circuits only one product is used and the other

ignored. Here we use the 455 KHz and ignore the 5065.

but this also happens at the same time
station 3215
LO 2760
Difference 455
Sum 5975

If the local oscillator is at 2760 when the radio is tuned to 2305 the difference of 3215 and the LO of 2760 is also 455 KHz so that product will pass through the IF stage.

Not that this will help a lot but it looks like 2305 is also a 3rd image product of the local oscillator and station frequency assuming an IF of 455 KHz.

Station 3215
Local osc 2760

Math
(2 x F1) - F2
(2*2760)-3215 = 2305

I don't know the radios design but if the 2nd image product is effectively blocked by say band pass filters then maybe the 3rd image product is being received.

The way this third image product could happen is that the local oscillator leaks out the antenna port or connection mixes, with the 3215 station and the 3rd image product can go right back through the radio input.

I agree. I love radio, especially HF Shortwave. I dont think I could ever get trired of it. Some people try to say SW is dead, on it's way out, "it aint what it used to be" etc. But, I can always find something to listen to. I also love all the imperfections of listening. All the noise, hash and pops, are music to my ears. Everything else we do now is all polished up, DVD Video, CD quality audio, high definition, sat radio and on an on. Shortwave signals are just plucked right of of thin air. That's the part I love the most.

Oh grow up. I don't see how stating the obviousness of what you posted
is an attack on your person. I'm not responsible for what you post.

Nice of you to stop the personal attacks in favor of actually supporting
your suppositions though.

Spec sheet are useless? No way I'm buying that.

So far you mention sensitivity and I don't much of a difference there.

The twin PBT tuning well I think you made your first actual point.
Congratulations.

How about the fact that the R75 has selectable filters in two IF stages?
Does that do anything for you? Maybe better image rejection?

Your deserved contradictions from the previous post are all attacks on
my person as I listed them and no facts on supporting your contentions
so what now? Are you going to argue that you did not post the previous
reply?

I got the fact you have used both radios. I read your replies. Now can
you get it through your thick skull that your posting style does not
inspire confidence in what you post. How am I supposed to respect the
posts from someone that attacks me and wipes his butt with printed
specifications.

Remember, I don't know you from Adam and what you post is all I have to
judge you on.

So relying of published specifications is "sophistry". Well crap I do this all the time at work professionally. Guess I'm in big trouble there.

You have me at a disadvantage as I don't have an R75 to get my hands on and I'm not likely to buy one given the state of the radio so by default I would usually defer to your experience but the stridency of your posts have put them in question I'm afraid.

Let me put it to you another way, you have been your own worst enemy just like the other R75 supporters of the past. I'm not saying you are as bad as some of those people as they lied unabashedly but what you have done appears as part of a poor pattern of posts on the subject that certainly do not inspire confidence.

You ask that I ignore specification sheets and instead fully rely on your experience when I don't know you and your posting style does not inspire confidence in your observations on the operation of the R75.

I realize this is a contentious issue fomented by myself at this time by sarcastically posting the R75 makes a good door stop but I for one did not learn much in this thread. Oh well.

(this is kinda long but hopefully makes sense)

When radio amplifiers first came out, a station's signal was amplified at the same frequency the station was transmitting on. If WWCR was transmitting on 3215 then all the amplifiers in your radio had to be tuned to 3215 - then, if you decided to listen to TGNA on 3330 [0], you had to retune all your amplifiers to 3330. That was a lot of knobs to adjust every time you changed stations! [1]

It had already been observed that when two radio signals are coming in on nearby frequencies, a third frequency is generated: the difference between the two. Edwin Armstrong figured out how to do this on purpose. Your radio works on this, his "superhetrodyne" (or "superhet") principle:

- You set the dial on your radio to 2305KHz.
- The knob sets an internal circuit, called a "local oscillator", to 2760KHz.
- This local oscillator generates a "dead air" signal on 2760.
- The "dead air" signal, and the signal from the desired station on 2305, are fed to a "mixer" circuit.
- Four signals come out of the mixer:
- The 2760KHz signal from the local oscillator.
- The 2305KHz signal picked up by the antenna from the desired station.
- 2760+2305KHz = 5065KHz
- 2760-2305KHz = 455KHz
- These four signals are fed to an "intermediate frequency" amplifier. This amplifer selects only the last signal, on 455KHz, amplifies it, and sends it to the speaker.

Now, let's say you decide to listen to WWV on 2500KHz instead:

- You set the dial on your radio to 2500KHz.
- The knob sets an internal circuit, called a "local oscillator", to 2955KHz.
- This local oscillator generates a "dead air" signal on 2955.
- The "dead air" signal, and the signal from the desired station, WWV on

2500, are fed to a "mixer" circuit.
- Four signals come out of the mixer:
- The 2955KHz signal from the local oscillator.
- The 2500KHz signal picked up by the antenna from the desired station.
- 2955+2500KHz = 5455KHz
- 2955-2500KHz = 455KHz
- These four signals are fed to an "intermediate frequency" amplifier. This amplifer selects only the last signal, on 455KHz, amplifies it, and sends it to the speaker.

To change stations, all you have to do is change the frequency of the local oscillator. The amplification always happens on 455KHz, regardless of what station you're tuned to. But there's a problem...

Let's say you're tuned to WWV on 2500KHz, but at the same time there's another strong station coming in on 3410KHz. The signals going into the mixer:

- The 2955KHz signal from the local oscillator.
- The 3410KHz signal picked up by the antenna from the undesired station.
- 3410+2955 = 6365KHz
- 3410-2955 = 455KHz

The intermediate frequency amplifier can't tell the difference between the 455KHz resulting from 2955-2500 and the 455KHz resulting from 3410-2955. It will send *both* to the speaker - the undesired 3410KHz station will be mixed with WWV. This undesired signal is called an "image".

In your case, again, when tuned to 2305, the local oscillator is on 2760.

- The signals coming out of the mixer:
- The 2760KHz signal from the local oscillator.
- The 3215KHz signal picked up by the antenna from WWCR.
- 3215+2760KHz = 5975KHz
- 3215-2760KHz = 455KHz

and you hear 3215KHz WWCR while tuned to 2305.

==========

There are a number of ways of fighting these images.

- You can add a selective "tuned circuit" ("preselector") between the antenna and the mixer. The idea is to keep the 3410KHz signal from reaching the mixer when you're trying to listen to 2500. A preselector isn't perfect, (it'll still pass some 3410) it's a bit expensive, and it's REALLY difficult to tune under computer control for the newer digitally-tuned radios. But it was quite popular in older sets and still has a place in modern radios.

- You can add a low-pass filter between the antenna and the mixer. This works well for radios that tune specific bands - for example, if you're

trying to listen to the 2300-2500KHz band, you can switch in a filter that only passes frequencies below 2600KHz. 3410 will be fairly efficiently stopped; the computer can switch in a few specific filters rather than having to tune every possible frequency; and it's not that horribly expensive. On the other hand, if your radio needs to tune every possible shortwave frequency, this scheme doesn't work so well.

- Instead of using 455KHz for your intermediate frequency, you can use a much higher frequency. For example, if you use 45000KHz, then when tuned to 2500KHz your mixer sees:

- The 47500KHz signal from the local oscillator.
- The 2500KHz signal picked up by the antenna from the desired station.
- 47500+2500 = 50000KHz
- 47500-2500 = 45000KHz

Now, the frequency that causes an image is 92500KHz; if this signal is present, the mixer sees:

- The 47500KHz signal from the local oscillator.
- The 92500KHz signal picked up by the antenna from the undesired station.
- 92500+47500 = 140000KHz
- 92500-47500 = 45000KHz

You can still get an image. But now, assuming your radio only needs to get shortwave stations, you can just put in a nice sharp low-pass filter for, say, 35000KHz. You never have to change this filter to any other frequency - 35000KHz will work for *any* station you tune. The lowest possible image frequency with a 45000KHz IF is 90000KHz, a 35000KHz low-pass will knock this down nicely!

It's a bit expensive to make a stable local oscillator that works at 47500KHz though. (and to receive a signal at the top end of the SW range at 30000KHz, the oscillator will have to operate at 77500KHz) So some less expensive radios will stick to one of the first methods, or no filtering at all.

Since you say the broadcast comes in better on 3215 than it does on 2305, it sounds like there is *some* filtering in your radio but it isn't quite adequate. It's hard to achieve enough filtering with a 455KHz intermediate frequency.

==========

The image is always separated from the station you're tuned to by twice the intermediate frequency. It's almost always above the station you're tuned to. (so if you're tuned to 2500KHz WWV on a radio with a 1000KHz intermediate frequency, the station that would cause an image response would be on 2500+(2*1000)=4500KHz) [2] The intermediate frequency of your radio is often printed on the label on the back, and it's almost always in the specifications in the owner's manual.

Images are MUCH less likely if you buy a radio whose intermediate frequency is significantly greater than half the highest frequency the radio can tune. (so for a shortwave receiver that can tune to 30000KHz, the intermediate frequency should be significantly greater than 15000KHz/15MHz) Some radios have more than one intermediate frequency, in which case the highest one is the one that sets the image rejection.

--
Doug Smith W9WI
Pleasant View (Nashville), TN EM66
http://www.w9wi.com

[0] I don't think TGNA is on the air anymore, and I'm pretty sure it never operated on 3330.

[1] By the time they figured out how to mechanically couple the tuning circuits together to require only one knob, they'd already progressed to the superheterodyne circuit. In any case mechanically coupling the circuits made it easier for the radio's owner but a lot harder for the designer & manufacturer!

[2] It is possible to build a radio where the image response is *below* the frequency you're tuned to. However, this is almost never done.

Nope. Just some of them. The 390 was made by contract based on bids.

I wrote to Hammarlund in 1970 for a current price list, and one of the items
was the R390 they had made under government contract. They were allowed to
sell to the public any excess production, and I snagged one for just over
$900.

I have an R8 and an R75, as well as a TenTec 350... the 75 is the worst of the lot for AM DX on Medium Wave and topical bands, even with the full gamut of mods. It is not a bad rig, but is an order of magnitude less effective in all aspects. I got it for a location where I do not spend much time, so it is OK... but would never be my choice for the more difficult DX.

If you are a dedicated DXer, and one radio will give you an ID and another will not, how do you put a price on such a difference?

Wrong. In 1970 I bought a Hammarlund made R390 direct from Hammarlund and
had it shipped (it came in oil cloth, of course, as any military receiver
would) and it had a Hammarlund manual and a Hammarlund plate on the back. I
believe three different manufacturers made different contract runs of the
R390.

Now that I re-read the post, I see you are differentiating between the 390
and 390A. I had two 390A's, one made by Hammarlund and one a Collins. The
were, to me, nearly identical. I never saw a 390 (without the "A") so am
unfamiliar with it.

49. WANTED - A Brand New Shortwave Radio with AM Ferrite Rod Antenna & AM-SYNC

DoN,

WANTED - A Brand New Shortwave Radio with AM Ferrite Rod Antenna &
AM-SYNC
SAT800 => http://groups.yahoo.com/group/Satellit800/message/12560
- - - Besides the Sony ICF-SW7600GR Radio.

DoN - So you want a brand new Shortwave Radio with
[x] a built-in AM Ferrite Rod Antenna and
[x] a synch detector.
{ Other than the Sony ICF-SW7600GR Radio }

Hey ! - That is the Grundig Satellit 800 Millennium Radio
http://www.universal-radio.com/catalog/portable/0800.html
'port-a-top' AM & FM and Shortwave Radio with LW and
AIR Bands plus FM Stereo Line-Outs
- - - Check [x] Check [x] and a lot more . . .

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast
bands used outside the USA. For multi-use bands, primary usage is shown.
Some stations operate outside official bands. Information is from Oct 2005
FCC rules and Jan 2006 NTIA manual, see Chapter 4 of:
http://www.ntia.doc.gov/osmhome/redbook/redbook.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is
5 kHz. Frequencies above 10000 kHz tend to propagate better during the day;
frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area.
Telephone lines present a potential shock hazard. Do not use this antenna
for transmitting. Use at your own risk.

INTRODUCTION

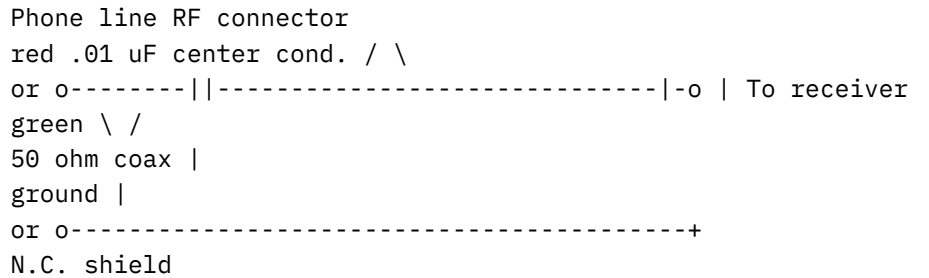
This article describes how to use a phone line as a shortwave receiving
antenna. Performance will vary depending on the kind of phone line you
have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally
pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting
the phone line directly to the receiver, try wrapping the phone cord
several times around the receiver's telescopic whip antenna instead.
Performance may not be as good as a direct connection, but it will
probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought
much about it because thunderstorms are rare in my area. Most phone lines
have lightning arrestors on them where they enter the house, but the
lightning arrestors may pass enough energy during a lightning strike
damage a receiver. My suggestion is to disconnect the antenna when not in
use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and
receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

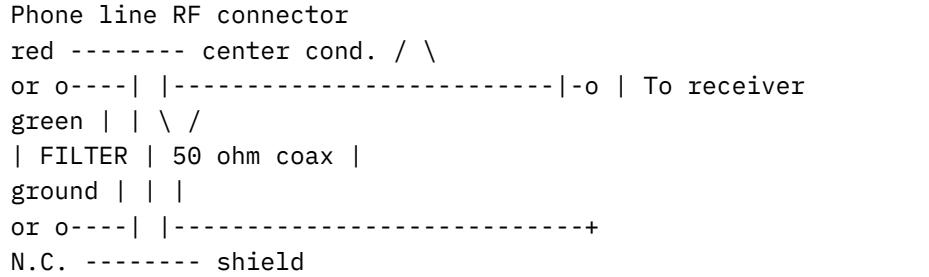
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

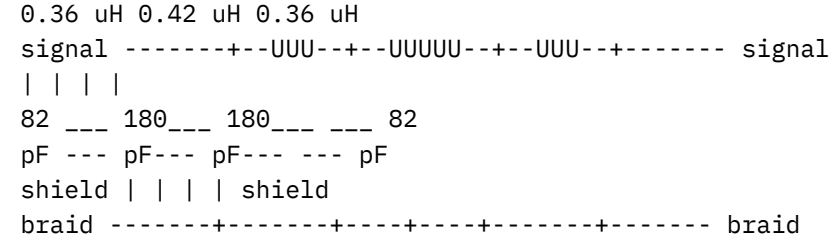
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:

Tell your neighbors
"I work for national security. That is a wire. Don't argue about it,
talk about it, or even think about it, or you will be in violation of
the National Security Act XXXXX blah blah blah and could end up in
Guantanomo as giving 'aid or comfort to terrorists' under provisions of
the Military Tribunals Act passed into law in October 2006."

That's what I tell mine.

Indeed. Here's a Redsun RP3000 image that I found through
images.google.com. The link from radiointel.com wasn't working for
some reason.

Note the "SSB fine" knob, and the "USB/LSB" button:

FO&A,

No so great Ad Copy on the website :
"A professional Dual Conversion Radio that you can expect !"
http://www.kaitousa.com/KA2100.htm

'expect' most likeky should have been "Respect" ~ RHF

IMHO - The Redsun RP2100 is a very nice 'portable' AM/FM
Shortwave Radio featuring Dual Conversion PLL Circuitry that
does provide very Respectable performance for a radio in it's
price range around $105 on eBay directly from China (PRC).

KAITO KA2100 - Value-and-Service - With a US Price of
about $130 the re-badged Kaito KA2100 with English Radio
Control Markings would be a competitive priced radio for
those US Consumers who would want a US Manufactures
(Distributors) Warranty and if needed a local USoA Product
Return Address.
KAITO KA2100 => http://www.kaitousa.com/KA2100.htm

ABOUT - Kaito USA
http://www.kaitousa.com/aboutus.htm
Kaito Electronics, Inc. (USA) was Established in 1997

Thank You "WeatherAll",

For this 'revealing' Image of the Redsun RP3000 Radio

REDSUNRP3000 => http://www.fenu-radio.ch/Redsun%20RP3000.jpg

Yes - There is a SSB Fine {Tuning} Knob
- - - But - To the Right of the Knob

Yes - There is a USB/LSB Button
- - - And - Above the Button

=IS= Aaaaaaaaaa Can You See It ? ? ?
- - - Yes Sireee Can You Believe It ? ? ?

The "SYNC" Button as in AM Synchronous Detector
http://www.fenu-radio.ch/Redsun%20RP3000.jpg

+PLUS+ A detailed look at the LCD Screen shows a
[SYNC] Icon to the Right of the Frequency Number.
http://www.fenu-radio.ch/Redsun%20RP3000.jpg

YES - IT LOOKS LIKE AM SYNCHRONOUS DETECTION
[AM SYNC] IS PART OF THE REDSUN RP3000 RADIO .
http://www.fenu-radio.ch/Redsun%20RP3000.jpg

One Question - At What Price ? ? ?
Under US $200 ? ? ?
-Or- Somewhere-in-Between ? ? ?
Over US $300 ? ? ?

Will the Redsun RP3000 Radio be "The Radio" that
puts-to-rest the Legend of the Sony ICF-2010 Radio ?
http://www.fenu-radio.ch/Redsun%20RP3000.jpg

The Redsun RP3000 Radio -Seeing-Is-Believing- It Has AM-SYNC !

60. So You Get The Bright Idea . . . To Use A Car Radio In-the-Home !

Newsgroup: rec.radio.shortwave
Date: 2007-01-01 11:24:53 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1167650693.107987.226380@k21g2000cwa.googlegroups.com>

For One and All,

So You Get The Bright Idea . . . To Use A Car Radio In-the-Home !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11842

If you are going to use a Car AM/FM Radio as a :
Home, Garage, or Basement Radio you need
1 - The Car's AM / FM Radio
2 - 12 Volt DC Power = Battery/Charger -or- Power Supply
3 - Two or more Speakers
4 - A good "Combo" AM / FM Antenna and Ground System

Numbers One-thru-Three usually work themselves out.
- - - Work with what you have and build from there.

For Number Four - Here is what I have found to work
as a good "Combo" AM / FM Antenna and Ground System :

* 75 Ohm RG6 Coax Cable from the Radio to the Antenna.

* A 104 Inch Stainless Steel "CB" [10m] Whip Antenna
with Mounting Hardware for the Antenna Element.

* A single piece of 21 Foot long Top Rail as the
Free Standing Antenna Mast with 3-5 Feet in the
ground. Locate the Mast about 15-25 Feet 'away'
from any structures and utilities. Plus use a 4-8
Foot Ground Rod at the base of the Mast and Ground
the Mast with it.

NOTE - That the whole Mast is Grounded and the
Whip Antenna sits on-top of the Mast = The Mast
is the 'other-half' of the Antenna -and- places
the Antenna about 16-24 Feet in the Air.

This Free Standing AM / FM Whip Antenna : Works as
good as any Radio-in-a-Car at the same location.
This Antenna and Ground Set-Up
* Works well for both AM and FM reception
* Omni-Directional for all around AM and FM reception
* Produces Strong Signals and is relatively Noise Free.
* The Antenna/Ground set-up is relatively Maintenance Free

No question... The R75 isnt a good MW rig. I wouldent choose it for MW DX
either. But... I would take it over the R8 for SW DX any day of the week
!!!!

OK, Einstein.... One more time for you. If you spent a day in your life with the R75, you'd have a fairly good idea of what makes the R75 perform well. Your commenting on the R75 and so am I, so I'm taking it as a matter of course that BOTH of us know more then just our ass from our elbow. Twin BPT and two filters in series have been stated to the point of being a criminal waste of bandwidth and time. You might as well state that an Subaru is usefull because it has four wheel drive. Two idiots that know what the hell a Suburu is dont need to say that out loud. The same applies here. I'm also going to take it for granted that we both know that the R75 and the R8 are shortwave radios and each has a power on switch.

> Your deserved contradictions from the previous post are all attacks on

>
> Remember, I don't know you from Adam and what you post is all I have to
> judge you on.

I did not.... I REPEAT... Did not make a blanket statement recommending the use of spec sheets as ass wipes. In the case of the R75 vs. the R8, I am recommending their use as ass wipes above their use as definitive articles for helping us with this particular comparison. The specs on both the radios are very close. Again.... Perhaps I gave you too much credit when I ASSumed you already had some idea of what both radios are. In this case... And let me say it again... This case meaning (the R75 vs. the R8 for

DX'ing).... BOTH OF US UNDERSTANDING THE SPECS ARE VERY CLOSE.... BOTH OF US KNOWING THE R75 AND THE R8 HAVE "ON" BUTTONS.... BOTH OF US KNOWING A SUBARU IS USEFUL DUE TO 4WD.... In this case, my good man.... This SPECIFIC question is best resolved by us swinging-dicks putting the radios to use at length. In this case, my ear is worth more then the spec sheet.

> So relying of published specifications is "sophistry". Well crap I do
> this all the time at work professionally. Guess I'm in big trouble
> there.

Previously you boasted about your financial prowess... Now you tell me you cant get by at work without instruction manuals. I never read one in my life. My first rule for technical manuals and instruction booklets. Throw them out before starting. If something blows up get first aid and write a strongly worded letter to the manufacturer.

Michael

"""

I have used car radios in the house and garage off and on for years and
they are very good. The biggest problem is the power supply. A
lead-acid car battery and charger combo will create so much hash from
the rectifiers that it drowns out much of the signal. A proper power
supply of 5 amps minimum is required and even it may create buzz. If
you use the battery with the charger unplugged it is quite satisfactory
at least until the voltage drops.
A vented lead-acid car battery should not be used near electronic
equipment. The h2So4 molecules emitted when charging eat hell out of
nearby circuit boards. I think a sealed battery would be ok but I have
not tested this. An old car battery can be used in the garage to test
the system but I would not use it in the house.
A two or three foot length of wire bare at one end which is pushed
into the (Motorola) antenna input will do surprisingly well. Most car
radios are very sensitive. I have used motorcycle batteries on a 1-amp
charger and they do not seem to create the racket of the 6 to 10 amp
chargers and they are quite cheapand compact.

Car radios have Hi Z active MW antennas and the 75 Ohm coax will not
work very well. Youd be better off just using a decent communications
receiver (R75 or better) with either an MFJ-1024 or a Stoner Mackay
Dymek DA-100(X)

Omni hasha yika.I don't remember the brand name of the car type batteries,I think it's Omni,or something like that.I am pretty sure the brand name starts with O,perhaps one of those batteries would be a good choice for an in the house car type radio.Some car type radios are better than other car type radios.Check out the car junk yards in your area for availabilty and prices.Best to charge car type batteries outdoors when they need recharging.

It seems that Michael in his zeal to defend the R75 forgot the original
question.

"drake r8 line longwave dx performance and the r75."

The Drake R8 series is sensitive on "LONGWAVE" with no modifications.
The R75 needs modifications to match the R8's performance on MW and
LONGWAVE.

That said, when it has been modified, the R75 performance is good.

I have owned both and preferred the R8B.

Michael.....grow up and get a life, or at least learn to respond
to the original posters question.....

The Toshiba at Cowboy Maloney's was $329.00 plus Mississippi Rip Off sales taxes.After I turned in the defective Toshiba to Cowboy Maloney's,I paid $32.00 and pocket change for my new Sony tv set.I really like the picture the Sony tv set gets on all tv channels,especially the tv channels I watch for the old,old movies I like.The Sony has an analog tuner and a digital tuner.I subscribe to DirecTV so when the big HDTV switchover happens in 2009,I think I will be all set for that,even though the Sony doesn't have a built in HDTV tuner.I am satisfied with my new Sony tv set.

Try your best to avoid your obvious compulsion to be abusive and antagonistic without provocation and listen up. The original post leaves plenty of room for comment regarding the performance of both the R75 and the R8. My post was not in defense of the R75 nor was it a hatchet job on the R8. It doesn't take more then the sense that god gave a mule to understand that. I've also found that individuals who use the infantile and banal clich&#65533; "get a life" are to a man/woman, the ones lacking in accomplishments, education and relationships. Is it your unique understanding of those deficiencies that prompt you to use it also ???

Michael

Lloyd, I can't believe that you, BJO, and some new loonies are still in here slinging all of this crap. I figured that you would have at least come up with something better to do with your time in the last 6 - 7 years then to carry on this crap. I saw a photo of you floating around the web this past year, Man are you getting FAT!, you better lay of the pizza. I tell you what, I will build a large cage on on my property here in Virginia, and you and the rest of the loonies can have a no holds bar cage match and beat the crap out of each other, I'll sell tickets to the event and the winner will receive 50% of the proceeds. You might even get enough to buy a new radio. Doesn't that sound like fun.

Dloyd.

You might want to take reading comprehension 101 over again. You must be an aspiring politician, you never addressed or answered the original question, but you danced all around it.

Bottom line, the R75 has the LW and MW frequencies attentuated and the R8 series doesn't.

See, that wasn't so hard was it?

You might want to take reading comprehension 101 over again. You must be an aspiring politician, you never addressed or answered the original question, but you danced all around it.

Bottom line, the R75 has the LW and MW frequencies attentuated and the R8 series doesn't.

That is a factual statement. There is also another fact that I'm sure you understand clearly. It is the nature of most if not all of these discussion strings to branch out and evolve. Once they do, they introduce new components to the discussion. My post was not extraneous to the discussion or off topic. Your banal antagonistic remarks were extraneous.

Michael

The excitement and variety which used to be in SW listening certainly
has gone. There exists only a ghost of what it once was. So many
things in this world seem to share this quality though, almost feels
like evil controls the world. (evil and false prophets!)

And, those lunatic con men spouting religious garbage and falsehoods are
a site to behold--reminds me of viewing a particularly disgusting dump.

Ignore the techno-geeks' physics explanation.

Images begin to occur after daily repeated and lengthy SW listening sessions to broadcasts consisting of either religious preaching or anti-American propaganda [BBC]. If one listens to either type of broadcast exclusively for an extended period of time the Images that you will experience will become permanent and irreversible.

I have now returned to AM DXing - this seems to be the
lesser-of-two-evils. If you can get 700 WLW Cincinnatti, I would
recommend Scott Sloan, 9:00 PM - mid-night M-F.

For One and All,

So You Get The Bright Idea . . . To Use A Car Radio In-the-Home !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11842

If you are going to use a Car AM/FM Radio as a :
Home, Garage, or Basement Radio you need
1 - The Car's AM / FM Radio
2 - 12 Volt DC Power = Battery/Charger -or- Power Supply
3 - Two or more Speakers
4 - A good "Combo" AM / FM Antenna and Ground System

Numbers One-thru-Three usually work themselves out.
- - - Work with what you have and build from there.

For Number Four - Here is what I have found to work
as a good "Combo" AM / FM Antenna and Ground System :

* 75 Ohm RG6 Coax Cable from the Radio to the Antenna.

* A 104 Inch Stainless Steel "CB" [10m] Whip Antenna
with Mounting Hardware for the Antenna Element.

* A single piece of 21 Foot long Top Rail as the
Free Standing Antenna Mast with 3-5 Feet in the
ground. Locate the Mast about 15-25 Feet 'away'
from any structures and utilities. Plus use a 4-8
Foot Ground Rod at the base of the Mast and Ground
the Mast with it.

NOTE - That the whole Mast is Grounded and the
Whip Antenna sits on-top of the Mast = The Mast
is the 'other-half' of the Antenna -and- places
the Antenna about 16-24 Feet in the Air.

This Free Standing AM / FM Whip Antenna : Works as
good as any Radio-in-a-Car at the same location.
This Antenna and Ground Set-Up
* Works well for both AM and FM reception
* Omni-Directional for all around AM and FM reception
* Produces Strong Signals and is relatively Noise Free.
* The Antenna/Ground set-up is relatively Maintenance Free

READ - Got that Car/Truck AM/FM Radio in the Home :
Now You Need an AM/MW Antenna or Two !

I picked up a like new (suspect it's been in storage for a long time) 1960's
Sansui 2000X at an estate sale recently for $10. I stuck it back in my
radio/computer room with four Minimus 7's hooked to it. Haven't hardly
turned on a SW since I got it. RM~

> mean when you get an image?

That you've got a superheterodyne receiver with insufficient image rejection. Superhets will always respond to both LO frequency plus and minus IF, so the wrong one has to be filtered out (more or less well).

> How do you know if it's an image or the
> actual station broadcasting at its frequency?

With a unit capable of sideband selective SSB (your 7600GR is one) that's quite easy: As you shift frequency with the main tuning, images will move in the opposite direction compared to real stations. In USB mode, for example, tuning 1 kHz down should move the carrier het upwards in pitch if it's a real station.

> Does getting an image
> indicate that you have a lesser quality radio? I have a 7600GR.

Many affordable receivers suffer from this, even if they're dual conversion designs. Here's a little background:

Single conversion designs typically use frontend tracking, i.e. tuned filter circuits (typically 1 or 2, full-grown FM tuners may use 4+) in front of the mixer whose center frequency is kept about the same as the received freq. Their steepness will vary according to losses in inductances and tuning capacitances (e.g. air cap or varicap diode), but most importantly the filter slope scales with the center frequency.

In other words, the higher the frequency, the wider the filter slope and accordingly the worse is the image rejection.

This means that a single conversion set (IF typ. 450..470 kHz) even with two air cap tuned tracking circuits will hardly have more than 40 dB of image rejection on the lower shortwave bands and may drop to less than 26 dB above 20 MHz, while the same effort may produce top-notch image rejection of 60+ dB on AMBCB/MW (and in fact using just one tracking circuit may already give good performance there). It also explains why typically the received frequency is f_LO - f_IF and not f_LO + f_IF which would be equally possible - take a look at AM BCB, and it's pretty obvious that f_LO - f_IF could mean e.g. 690 kHz while f_LO + f_IF would be 1600 kHz. Suppressing an image from 1600 on 690 will accordingly be a whole lot easier than doing it the other way round. (It's even more

dramatic on the longwave band, look at 153 kHz and 1063 kHz.)

And by the way, this issue is why one started to use superhets to begin with - a direct conversion rx would need a tracking "IF filter", and something an acceptable 6 kHz wide on 49m would end up with almost twice the bandwidth (and accordingly, much worse selectivity) on 25m.

One central advantage of frontend tracking is that it reduces the RF power offered to the mixer quite a bit and can thus improve (wide-spaced) strong signal handling dramatically. (This is the merit of preselectors and tuned antennas.)

This was the "classic" way of getting rid of images, with more elaborate receivers having whole arrays of fixed bandpass filters in addition. (Sets like this could already be bought in the 1940s.)

Straightforward modern-day *dual* conversion designs (e.g. the 7600GR, or most other portables for that matter) are quite different. They use a very high 1st IF (typically 55.845 MHz as it ensures that images from FM can't appear) and then mix down to a normal 2nd IF like 455 kHz. The frontend tends to be quite wideband with only some lowpass filtering to get rid of 1st IF images (from +111.690 MHz in this case), accordingly strong signal handling tends to be problematic (mixers for high signal levels tend to be power hungry and noisy, so usually are not an option for portables).
On the 1st IF there is a crystal roofing filter with typically 10..30 kHz bandwidth and of typically 2nd order (as Pete KE9OA mentioned a week ago). Only this can actually do anything about images appearing due to mixing to the 2nd IF (f_LO e.g. 55.390 MHz); it is also essential for reducing the signal level offered to the 2nd mixer (which is why John Thorpe recommended against fitting a wider roofing filter in the AR7030 for wideband DRM rx, it would negatively affect the close-up intercept points). With a 2nd order filter you can hardly obtain 50 dB of (effectively) +910 kHz rejection, dropping to under 40 dB if there's some leakage around the filter. This is where your images come from.

Since your rx uses a wideband frontend throughout the whole AM range, you'll also notice images on MW and LW. Historically, some manufacturers (e.g. Grundig) have carried out their MW/LW parts as separate single conversion sections with frontend tracking (every additional mixing process introduces noise after all), but it is also possible to combine a dual conversion design with high 1st IF with some frontend tracking to improve image rejection and strong signal handling on the low bands (e.g. Redsun RP2000/2100, with a spec'd image rejection of ">40 dB" on SW but ">60 dB" on MW).

BTW, back when high 1st IFs were impractical for multiple reasons (frequency stability, achieving high gain), dual conversion receivers with 1st IFs of 1.85 .. 3 MHz weren't uncommon - mainly in the tube era, but the drum tuner Grundig Satellits still took this kind of concept into the very early 80s. These concepts still had to employ frontend tracking but could already achieve much better image rejection for both

IFs than single conversion designs built with comparable effort.

What you can do to get rid of these images (at least on the lower bands)
is quite simple:
Use a selective antenna or a narrowband preselector. In terms of tunable
antennas, I would have suggested the DE31A if you really want to tune
120 meters, but it seems this antenna is no longer available. You can
buy the DE31MS/TG34 active MW/SW loop which covers 3.9 to 22 MHz on
shortwave, or the classic Sony AN-LP1 of course, which has a similar
tuning range with discrete band filters (I can only highly recommend
it).

Source record: 102058

As I understand it, the E1 is still quite closely related to the Drake SW8 and thus the Sat 800 when it comes to the internals. The SW8 did not feature any internal antennas and was to be used with external ones. Then the Sat 800 had a ferrite antenna, and folks promptly complained about a multitude of strong birdies on MW (I guess the receiving sections are decently shielded but the microprocessor and stuff are not, which didn't matter in the original design). Now much the same electronics are inside the E1, and people are complaining that it doesn't have a ferrite antenna...
That a top-notch portable like this should normally have one (of a considerable length nonetheless) is another matter - electrical antennas are just about useless when the least bit of nearby RFI is present. So for AM work, one should plan on using an external AM loop with the E1.

Oh, and it's true that RDS for FM wouldn't have hurt either (a real Grundig would have had it) - we have a 15 EUR kitchen radio featuring RDS including CT, so it's not like the chips would be terribly expensive or anything (apparently there's a Rohm BU1923 inside that one).

fyi

The site has been update, and will not longer be a voice for North Korea.

http://www.voiceofkorea.org

Here is the text of the page (in case it gets removed):

VOICE OF KOREA SUSPENDED

MY COUP D'ETAT, CONSCIENCE AGAINST REASONS OF STATE

For last ten years, I have done my very best to serve DPRK in great passion.

I did not hesitate to sacrifice my time, money, honour, effort, and family for the great fatherland and I was always proud of myself because I believed that I am doing right things for the entire Korean history. I was a man of belief who tried to rescue righteous Korean history from the wrong track which called US imperialism originated by Japanese colonialism. I have been working day and night without holidays and abandoned my jobs several times in order to work for the fatherland in maximum efficiency. I was not afraid of being abandoned by another fatherland - South Korea - and friends, family, and neighbours in South Korean community here in Europe. I was totally isolated by South Korean people and lost all contacts from my family in South Korea caused by my DPRK friendly behaviours but I did not stop to serve DPRK as I considered it the true fatherland, the pride of entire Korean history, the descendants of the glorious ancient Korean empire.

Since I was 13, North Korea always has been the dream land for me against unfair social corruptions and enslaved servile spirits of South Korea. I was madly in love with stories of Ryonkaesomun and warfare history of North Korea for last 5,000 years and I was so much fond of history books of North Korea during my childhood. My emotion was strongly attached to DPRK because the lives of our family in South Korea were miserable suffering hopeless poverty. My weak young spirit was brutally ruined by the social unfairness of South Korean ultra capitalism. I have seen tens of thousands people living like animals in poverty and my angers were growing with the hate of ultra capitalism. Since I was 16, I wanted a red revolution to overcome the misery of life in South Korea. My life finally ended with South Korea when my father was killed by the system and my family was finally abandoned by other family members because my father was a socialist

who did not make money for himself but spent everything he has for struggling with malicious South Korean politics, the dictatorial ultra capitalism under US imperialism.

When my father left us, it was raining, a heavy shower with thunder and lightning, and I was 18. I still remember how desperate we were when father died and his body was thrown in raining street because we did not have money to buy a small piece of land to bury him. I remember my grand mother and grand father were crying in cold raining street because my uncle denied to bury him at his land. My life wiped out with the rain and the cold raining day in autumn was my last memory in South Korea. I never considered South Korea as fatherland since the time. I am now 40 became father of three children but I still can not forgive South Korea and still suffering nightmares very often, bad dream about the horrors of childhood. I never told my children that their fatherland is South Korea but France. I left South Korea alone when I was 18 with 1,500 US dollar I owed from a relative and started a new life in France. My life in France was hard but never wanted to go back to South Korea and I rather preferred to die in French soil. France is my third fatherland gave me lots of opportunities of survival. France gave me wife and children along with happiness, which I never had in South Korea. It is such good to taste the happiness and I always thank France.

The happiness in France does not mean that I forgot all the miseries I experienced in South Korea. My anger was still like the volcano and a North Korean diplomat I met in Paris gave me a solution how to express my anger toward South Korea. I have visited PyongYang for the first time with him and learned lots of things about the real North Korea. Since I was 29, I have been involved in many industrial trades including financial transactions and military trades as well as other media activities including Voice of Korea. North Korea is a very special country, maybe too special beyond my historical knowledge. By Instinct, or by my father blood, I resist every kind of authoritarianism which against the rights of ordinary people. The rights of ordinary people always have been the measurement of the democracy in my life but the reality I saw in North Korea was what just against my political belief. DPRK must be a socialist state where the social equality must be guaranteed for everybody, and DPRK must be democratic state where ordinary people are the masters of the state because the state claims itself 'DEMOCRATIC PEOPLE'S REPUBLIC'. I have seen ordinary people's life is hard and the national security has been long time political excuse over the poor status of ordinary people there. I must confess myself that I have been providing theories of excusing myself and DPRK regime which ignoring the facts of ordinary lives in DPRK. My behaviours of last 10 years are against my own belief but I continued walk on this road because I needed an exit for my anger and hate toward South Korea. I required ordinary North Korea people to be sacrifices of national security in my theory but I did not participate their miserable lives myself. I must confess myself that I am such coward and one of the most hypocritical figures in

modern Korean history. My fictitious behaviours are also against my religious conscience as I am a Roman Catholic and I ask lord a forgiveness.

I still believe Korea should have full independence from USA and must be forever independent from its influences. My confession does not mean that George W Bush's war policy against North Korea is a right one because Bush himself is the one who against ordinary people's rights in USA and other nations. However, Anti-George W Bush does not mean that Kim Jung Il regime's political excuse - The national security - over poor lives of North Korean people is righteous. I know that there are many possible and realistic negotiations and arrangements between the two extremes - American extreme and North Korean extreme - but the negotiations will have great flexibility when Democratic People's Republic of Korea became the real democratic people's republic without non-democratic authoritarianism. The current regime is not the leader of people but the royal family rules over the people. This should changed into democratic elections and extended freedom of speech. People's lives must be chosen by people's favours, not by the dictatorial system. I remember that South Korea was exactly like that when I left the country long ago. However, I do not want USA rules over DPRK because I saw how Iraq and Afghanistan became under US rules. My resistance to DPRK politics has nothing to do with USA and I express the same resistance to US imperialism as well.

In 2007 this new year, I became 40 and I need to admit that it is now the time to forget all things behind of the curtain. I shall erase all my bad memories about South Korea and must face the new future of my children and children of Korea. I should not be the victim of anger, should not be the sacrifice of hate as long as it makes North Korean ordinary people becoming another sacrifices of my own. I today officially declare that I stop all supports for DPRK regime and will do the same supports for North Korean ordinary people instead. This declaration will surely result myself being abandoned by DPRK government just like I have been abandoned by South Korea government before.

I regret my life with DPRK government for last 10 years but will not repeat the same mistake again in future. For last 10 years, I have learned lots of things that threatening DPRK is not the solution to make the country better. USA's 'gun first' cowboy policy only makes the country worse and worse in my experience. US cowboy policy only makes DPRK people more and more solid against foreign invasions and this is their nature. This kind of forced situations only give DPRK regime benefits and driving ordinary people into poorer conditions. This is the reason why the national security became the political excuse of hardening ordinary people for last 6 decades. USA must study 5,000 years of North Korean history first before doing a rash thing. Mr. Bush may against non-democratic dictatorial state but he should know that himself is non-democratic as well. He should choose a democratic solution which is not radical, unlikely Iraqi war. USA

should allow DPRK to freely trade with USA and other nations and let the country make money in legal businesses and industries. I tell you what. The only possible method of changing DPRK is MONEY. Let them normally trade with USA and the rest of the world and they will taste the power of money that brings better life and improvements. When people taste sweets, then they will never go back to the bitterness. Remember. The country only can be changed by its own people which is the internal factor, but will never by USA which is the external factor. That's Korea.

I also need to announce that ROCK FOR PEACE will be suspended along with myself. It was my passion to bring rock festival into North Korea but I decided not to continue on this project because I know full details of the event, the reasons, the purposes, the backgrounds, everything. The reason why I abandon the event is because the event was politically designed which gives more pains to ordinary people but more benefits to the regime. The event was designed to generate westernized reputations over the current isolated image of the regime. I have generated lots of reactions from world medias and I was about to use them in order to generate new political images for internal and external political purposes. It has been also designed to make more money while UN sanction is restricting DPRK rulers. I am pretty much sure that the money I create from this project will not benefit ordinary people but only gives political fund for ruling minority only. I have been interviewing with world medias about this project and consistently gave political arguments that WE ARE NOT ISOLATED but forced to be isolated by USA. I also gave lots of excuses while the interviews but I must confess that all I said are lies. I confess that DPRK is isolated, not forced to be isolated, and the reason of isolation is not the national security toward the independence. The true reason of the isolation is the security for the ruling minority. I was the evil painter who painted fake images over the true phenomenon.

USA should know that small amount of this kind of illegal money flow only feed the ruling minority who make ordinary people fall into worse conditions for their own sakes. But large scale of regular free trade at national level will make ordinary people awaken from internal darkness because they will taste the differences from outside world. The regime will be unable to control people when people are massively moving forward to make money for themselves. Do not threat them. It only makes them be cautious and this kind of tension only drive ordinary people fall into the famine and death. Let them trade freely and legally. I dare to say that they will never go back to the past when start to make money. The solution is not GUN but MONEY but do not give them money but allow them make money by themselves.

I will spend my rest of life for the freedom of ordinary people in North Korea, not for the regime. I appreciate if any of you give me an opportunity to join with certain movement whether political or non-political for the purpose.

I am soon starting a small phone shop here in London selling mobile phones and I am very happy to come back to the normal civilian society. It has been very long time that I was away from the society. It is very nice to have a normal job like this though I am not sure for the success of this business. For symbolic purposes, I will use the web site of Voice of Korea as the web site of my phone shop. I think that it will be better not to shut down this web site for people to read my confession and know more about North Korea in free conversation with me though it is funny to see mobile phones soon here at the same place.

After 10 years' long journey to wrong directions, I am very afraid of coming back to the society but will do my best to make <normal money> for my own family. I feel very sorry for the musicians who applied for ROCK FOR PEACE but better this way to stop right now.

Happy New Year for all of you.

- Car radios have Hi Z active MW antennas
- and the 75 Ohm coax will not work very well.
-
- Youd be better off just using a decent communications
- receiver (R75 or better) with either an MFJ-1024 or a
- Stoner Mackay Dymek DA-100(X)

David - The next time I pull an Icom IC-R75 Receiver
out of a Car - I will do just that. ;-)

You are correct. Either way it is a winner.

Not sure if this is related in any way, but my wall wart was noisy until I added a 3-prong to 2-prong adapter and prevented the third prong from making contact. It seems to have eliminated most of the noise. I wonder if it is some sort of grounding issue that Bart has encountered. I have had mine plugged in almost constantly for about three months with no issues.

DEL - While the Sony XRF5100 Car Stereo with Shortwave Coverage
and Cassette Player is a nice unit it cost over $200

A used Car Radio often can be had-for-free or for under $25.

The idea of using a Car AM & FM Radio In-the-Home
is for AM [DX] and FM Radio Listening - We all have
better Shortwave Receivers to Listen to Shortwave on.

The 'thought-begins-with' : OK I Have This Old Car Radio . . .
-and- ends up with : Hey - I could . . .

enjoy your radios in-or-out of the car ~ RHF

VE3,

A 7+ Amp Hour Rated "Seal" 12 Volt Battery (Gel-Cell)
http://cgi.ebay.com/_W0QQitemZ26006439826

Using a 12 Volt "Trickle Charger"
http://cgi.ebay.com/_W0QQitemZ260053633101
http://www.amazon.com/1-5-Amp-Automatic-Trickle-Charger/dp/B00063V5K0
usually works very well with modern
Solid State AM & FM Car Radios

Charge the Battery when the Radio is Not-in-Use. Plus disconnect
the Battery from the Charger when the Radio is In-Use -and- Un-Plug
the Charger too.

Put the Battery and the Charger in a Vented Wooden or Metal Box.
Use a DPDT Switch to 'switch' the Battery from "Charging" to
"Powering-the-Radio" and either Un-Plug the Charger from the Wall
-or- use a second AC On-Off Switch to turn-off the Charger when
the Radio is In-Use.

OK "mind reader" that's what you must be because you think I can do the
same. You seem to think the only waste of bandwidth is actually speaking
of radios. I don't need the lecture from you or digression to cars for
an example just state the facts or your experience with the radios.

And I quote:
"Again.... Pardon me for being crude... But in this case... For this
comparison, you can wipe your ass with spec. sheets. Really..... Im
talking practical hands on time with both radios. I know what the hell
the specs are and it would be a useless exercise for me to post links to
bench marks."

Sounds pretty blanket to me.

Why would you assume I know how both radios operate. I told you several
times I don't have access to an R75. You are just being silly.

I did nothing close to boasting. I answered your accusation on cost
being a bias driver in my views. The relative costs of the radios is
not important to the thread as the SUBJECT is "drake r8 line longwave
dx performance and the r75".

Where did I write anything about instructions? What I posted above is
specifications. What is your problem here, you don't know the
difference?

You never read the instructions? Now that's funny. You really are
amusing in your own way. How old are you anyway? If you are an adult
what do you do for a living?

I have the R75 specifications and operating manual in PDF format that I down loaded from the web. That's the manual you threw back in the box and never read. Basically I understand how to operate the radio from it but that is not the same thing as actually using the radio. For example it is well known the sync does not work but I understand that from peoples posted experience with the radio. If the manual was all I had to go on I would not know this. I can't know how well the twin passband tuning works either in various reception conditions. It might not help at all just like the sync does not work.

My dilemma is that I don't have experience with the R75 and you claim that you do but your posts do not inspire any confidence in your comparative claims between the radios. The name calling, digression to cars, crude language, mischaracterizing or misconstruing what I posted, and the like do not inspire confidence in your posted claims.

> issues.

The problem may not be the wall-wart supply. The third prong is earth
ground in the AC main system. This third connection is not directly
brought to the supply output to the radio but is usually capacitor
coupled to the output. This coupling is supposed to be a noise bypass
for the supply to meet EMI/RFI requirements.

Perversely though it can have the opposite effect if other noisy devices
are on the same AC mains using the same method of decoupling noise from
their own internal circuitry. With the AC mains ground already polluted
with noise currents from other devices this capacitive decoupling
actually couples noise on the mains to the wall-wart output making
things worse instead of better as you found out.

Buy a replacement male 3 prong plug from a hardware store.
Be damn certain to connect to the ground pin.

I have a 3 prong with a 5 way binding post connected to the ground pin.
When settting up a temporary listening post, it has >sometimes< been
usefull. The problem is that outlet that is only "5' " from the breaker
panel
may run many times that distance before it reaches the outlet. The
shortest
route is seldom the one used by electricians.

I also carry a large, 3" jaws, alligator clip to test the "cold water
pipes".
Again this >sometimes< is workable.

For most applications, and for all permanent setups, a dedicated #8
solid ground
wire should be used to attach to the electric service ground rod.

Never ever attach to a gas pipe!

Terry

You can discount anything that I offer by calling me a fraud. Given you don't have my experience with both radios coupled with the fact that you are arguing a fallacious point with respect to the R75 vs. the R8 for DX, decrying me as a fraud is a very convenient thing for you to do. And you hypocritically protest that I am the one attacking you.

> Not having experience with an R75 is not in itself a dilemma. This is
> just another blatant attempt to misconstrue what I posted, which shows
> that you are not serious about the subject and just a Troll.

You've tried to nullify the fact that you are on the loosing side of this exchange by calling me a fraud and now you are going to write me off as a Troll. Once again... A convenient thing for you to do. I've stated several times that I felt your mistaken position regarding the R75 vs. the R8 was owed to the fact that you were lacking in real hands on experience with the R75 side by side with the R8. I see now that I was not in error.

Just to remind you, here are a few of your own little tid-bits.

* "The R75 makes an excellent door stop to the radio room." (your statement prior to ANY postings by myself in this thread)

* "The R75 is a tar'ed and feathered radio."

Both of those statements coming from one with admittedly little or no experience with the R75. All the world trembles before the siring logic of your fiery intellect.

Charley Weaver,aka Cliff Arquette was born in Toledo,Ohio in December 1905.He was a comedian,actor,pianist,composer and song writer.He was in the Henry Halstead Orchestra in 1923.He opened a Civil War Museum in Gettysburg,Pennsylvania in 1959.There wasen't anything wrong with Cliff Arquette.He was a pretty smart guy.I don't doubt he owned and listened to a Shortwave Radio.
Rest in Peace,Cliff Arquette.

If I were that close to the actual ground rod I would run the ground
wire to that rather than rely on perfect connections through the main
panel. It would probably be ok but you should check the ground hole
with a ground fault indicator. I have seen sockets with the polarities
reversed and the ground wire not connected and I would not trust any
socket until I had checked it out. Perhaps some electrical person will
have further info.

I've noticed the same thing. In the local newsgroup here, I'm one of
the long standing posters, and I had the same email address for
almost a decade. Yet, I don't show up in those silly google things, because
there is a lot of crossposting and the type of people who cross-post are
terribly prolific, though often they don't actually have much to say (or at
the very least, what they have to say gets repeated and repeated).

It's the same thing here, one fool who can't even live up to community
standards about posting, and a handful of people who are constantly
cross-posting.

Take such people away, and a far more realistic view of any newsgroup
would appear.

That's because you'd rather see your own words than read.

The only relevance Charlie Weaver/Cliff Arquette has to this newsgroup
is that he had an amateur radio license.

I agree with the other reply. What I would do is buy another clamp for
the ground rod. Clean the area on the rod and attach your new clamp
and ground wire. I would not trust the connections in the electric
panel especially if the panel and ground setup is 5+ years old.

Also, this is the approved way of grounding it. In the event of a
lightning stirke to the mains, that connection to the panel even
though it is a short distance away from the ground rod may develop
quite a high potential.

Where did I call you a fraud? I quote myself here.
"The name calling, digression to cars, crude language,
mischaracterizing or misconstruing what I posted, and the like do not
inspire confidence in your posted claims."

You just can't get the point that your posting style does not convey
confidence in what you post.

> Given you don't have my experience with both radios coupled with the

> attacking you.

What fallacious point with the R75 vs. the R8 for DX have I made?

How is it convenient for me to do to decry you as a fraud instead of
discussing radio. These are just distractions that I don't care for. I
think they are convenient for you since you have no basis for your
argument.

How is pointing out that your posts were mostly attacks on me instead of
information on the radios being hypocritical?

> > Not having experience with an R75 is not in itself a dilemma. This is

I think someone once said he sold off some of his Shortwave gear before he moved to the Philipines.Gee whiz,,, what was he thinking? He could have left them at his place in Pahrump or put them in storage somewhere. cuhulin.

143. Degen 1103 used for RTTY/Fax decoder?

Newsgroup: rec.radio.shortwave
Date: 2007-01-01 22:57:17 UTC
From: snow <sandyscamper@yahoo.com>
Message-ID: <hlgmh.5138$5q6.1066@trndny02>
Source record: 102093

I noticed the Degen 1103 has a line out connector.
I am wondering if anyone has tried to connect this to a computer (using appropriate plug) and use some of the free software available on some ham sites to decode RTTY, Fax, CW, etc? Any luck? I have not tried it on mine yet. I did it with the Icom 735 I use to own, and easily decoded fax weather maps on shortwave frequencies and some RTTY stuff also. Since the Degen 1103 is fairly sensitive and does SSB, I was thinking it MAY be capable of decoding shortwave data signals with the appropriate software.

Lets see... So far you have called me a fraud, a troll and now your accusing me of impersonating some odd poster that you had an exchange with.

Your statement likening an R75 to a "door stop" should have been a clear indication to me that you have limited experience with the R75 and limited experience with the hobby in general. That absurd and inflammatory remark was your own indictment. Being that this is a discussion group, I expect and appreciate opposing views. Including, disparaging commentary regarding the R75 or other good radios from posters that are compelled to malign decent products with motives ranging from ignorance to xenophobia. When you make your "door stop" statements, know full well that you have an audience here for it, but part of that audience will take to task.

I will speak no more of it.

dead of night schrieb:

> Thanks for the help, Stephan, very imformative. So if it's an image, on
> SSB the vocals will go up as I tune up?

That should happen, though I don't think the vocals are a good guidance when the image comes from an AM station (as they're always present in both upper and lower sideband) - I'd rather rely on the carrier. If it's an SSB station causing it, you'd also observe that the image is on the other sideband. (So if you find a utility station below 10 MHz in LSB, check whether it's an image.)
BTW, depending on how well-aligned your rx is, a slight shift of the carrier can be enough to discern an image from an AM station in SSB. Many stations are very accurately on freq, so if you've set SSB fine tuning to give zero beating on a real ("known good") station, you may find an offset of a few 10 or 100 Hz (i.e. hum/whine) with an image if the 2nd IF is not exactly 455 kHz. And chances are that this is the case, since it is neither possible to align a receiver like yours so precisely nor would it make much sense (frequencies tend to be affected by crystal aging and temperature changes anyway, the IF filter isn't super narrow either, and lastly readout is to 1 kHz only).

BTW, to receive anything real at all on 120m I think it takes (in that order) a very quiet location, a good (typically large) antenna in the right direction, a "real" rx not affected by intermod down there, and last but not least some patience. (Finding some hams on 160 might be more doable, at least I have heard some in the past, even with the 7600G and some weird antenna contraption that somehow kept the intermod away yet provided more signal. The antenna tuning of the whip tends to be lousy down there, so you can pretty much forget about using that.) These low ranges are quite special, and I guess the best kind of indoor antenna would be a large tunable active AM loop adapted for about 50% higher frequencies. Then the only thing missing is the quiet location, due to the selective antenna the 7600GR would be entirely sufficient receiver wise, though I'd prefer something with tone controls like my trusty Redsun. (This assumes no kind of heavy interference requiring any advanced bells and whistles, of course.)

Hmm, maybe I'll be dragging out the '7030 now...

Have you ever heard of, or tried, the Sony SRF 59? It too is about a
$12 analogue pocket radio. The reception is outstanding and it gets a
very powerful, stereo FM sound.

Perhaps it's safe to say that if I receive anything at all on that band
it's probably an image. Not knowing too much about shortwave, and just
learning now, I had been treating all SW bands equally.

00:03z - Finally coming in well enough to get ID - Undercover Radio

Sounds like they where just playing old Genesis or Peter Gabriel.

Heard in Austin, TX with a FRG-7 and 20m dipole.

Happy Newyear!

- Matt

Not for anything below 7 mHz, in any case. The R8 series is vastly better in
that frequency range.

I just connected the line out (got the cable from Radio Shack I had stored
in my shack) to the soundblaster card on the back of my computer using the
Mmtty shareware and though the date is all scrambled right now, I am able to
detect data off the Degen 1103. I am sure if I tune correctly to a signal I
will pick up RTTY weather stations, etc. So, the Degen 1103 is also a
defacto decoder! For a cheap $60 radio it sure does alot. I doubt few radios
below $200 can so this.

His wife, just wanted more of his money, probably to get her extended
family shipped back to USA, now that she suckered him into marrying her
for US citizenship. She is stripping him of all his personal identity,
so that, she can be in complete control of him psychologically, and
thus, his money. Tramp !

He brought his gear to the PI. He will probably buy new gear for the US since nobody wants to pay customs more than once.

I'd expect him to maintain residences in both countries. Hey, he has the money. You gotta spend it somehow. Ham gear and a young wife sounds like good places to invest your money.

I really have to laugh at all these yahoos on the net wagging their fingers at Art, when we know they are all just jealous.

165. Stucco House in Los Angeles Hills

Source record: 102263

So I live in a stucco house in the los angeles hills. I was in hawaii for the month of december where a random wire tossed out the window, with the other end wrapped around my grundig p7000 (yes, i know it stinks but it's all i have until i buy a better radio), was my main rig and worked pretty well. Could pick up CRI, RNZI, BBC, ABC, etc.

I get back to LA & use the same setup but my reception is total garbage except for a few religious nuts in which i have no interest-- brimstone and damnation mixed with right wing politics types.

Is the antenna the problem as it runs in through the window and then picks up all the interference from the stucco metal lathe? Or does the radio just suck? I am willing to do a proper antenna setup-- can anyone suggest anything?

thanks.

Yeah, right you are. Jealous of getting taken to the cleaners by a gold digger!

First, after a 2 or 3 week "rebound" courtship a 20 year old wants to marry a grandfather, then very soon pregnant, then "never go to the US", then go to the US. The noose continues to tighten.

Art must never have heard the old story about the monkey who had part of his tail cut off by a power mower, turned around to see what happened and then got decapitated; moral of the story?

"Don't lose your head over a piece of tail" :-)

167. Panaxis ACC100 Transmitter

Source record: 102269

DC - Nice to see you posting here.

Let-Us-Do-The-Math :

1 - Redsun RP2100 Radio via eBay from China (PRC)
eBay Buy-It-Now Price $56.90
Plus China Mail Cost of $48.00
Equals a Total Price of $104.90

This is about $105 to get the Redsun RP2100 Radio
to your Door and all you have is a Mainland China
{Redsun} Warrenty that will cost you $48 to start
with to Mail it back to China. {Let the Fun Begin}

So... A Price of $130 in the USA for a Kaito KA2100
with a USA Warranty with return Mail within the USA
IMHO - Ain't Such A Bad Deal ! ~ RHF

May I State - In The Interest Of Full Disclosure :
I bought my Redsun RP2100 Radio via eBay
from China -and- I like it very much and feel
that it is a very good 'portable' AM & FM plus
Shortwave Radio with many quality features.

If you like the GE Superadio and the Grundig S350 Radios :
Then get the Redsun RP2100 Radio -and- get the best of both.

NOTES :
1 - I like it very much = Love It !
2 - Feel = Feelings* Are Facts.
* Because as Radio Enthusiasts :
"We" each have a Relationship with "Our" Radios.
.

I have two rigs. An NRD-515 with matching speaker, memory unit, and extra filters with the Gilfer 10 turn pot. The other is a Drake R7A with the RV75 and all the nice filters with aux 7 board plus ms-4 speaker. I can only keep one. Which would you keep?

Whew! tough decision!
Both are superb radio's in their own way, but if I had to give up one it would be the NRD-515.
IMHO the Drake R7A with top filters must be one of the most awesome DX radio's ever made.
I think the prices they reach on eBay attest to that.
Good luck

I've got both and NRD515 and a Drake R7. I updated the 1st mixer with a lower noise Mini-Circuits SRA-3MH and the 2nd mixer with a matched set of hot-carrier diodes. Both of the receivers do well in the SW ranges, but the Drake has the edge below 1.5MHz.
The problem with the 515 is that MW preselector. It would have had lower loss if they used a fixed bandpass filter for the front end instead. LW performance also rolls off below 100kHz. When I tune in that data signal on 24kHz, the R7 receives it much better.
Still, the 515 is a fun receiver, so I have kept both of them.

Good thread. Sorry for top post but that is my way sometimes.

I run most of my shack off of car batteries. I pull batteries out of
the cars after a few years of service and have a large collection of
used ones. (I don't want my daughters getting stranded anywhere) I
just use a trickle charger to keep topped off. I don't worry about
hydrogen gas.

regards,
NEO

Is shipping really $48? I bought the DE1103 from China and I don't
recall spending that much. I am thinking of the RP2100 radio because
it has 455kHz out and would be good for detector experiments and I hear
sound is pretty good too.

Yes, I checked shipping on both. The Degen is 24 bucks and the Red Sun
is 48 bucks. Doesn't make a whole lot of sense to me since both are
small packages.

I ordered the unit from Kaito for $141.73 Let me tell you that that is a lot of money for a radio that costs about 57 dollars on Epay. I am glad to have the conus warranty though. I see a few units have come across with no audio on Yahoo group although I think one fixed itself.

It comes with the KA33 (I think that is number) antenna. That is a loop antenna that looks like the KA31 but does MW bamd as well and has a coupling unit for the ferrite bar. I'm sure I will have fun with radio and it has IF out for experiments with SSB and AM and so forth.

Of course, flourescent bulbs create RFI.

http://www.nytimes.com/2007/01/02/business/02bulb.html

The Energy Challenge
Power-Sipping Bulbs Get Backing From Wal-Mart

While it sounds like a promising idea, it turns out that the long-lasting, swirl-shaped light bulbs known as compact fluorescent lamps are to the nationï¿½s energy problem what vegetables are to its obesity epidemic: a near perfect answer, if only Americans could be persuaded to swallow them.

But now Wal-Mart Stores, the giant discount retailer, is determined to push them into at least 100 million homes. And its ambitions extend even further, spurred by a sweeping commitment from its chief executive, H. Lee Scott Jr., to reduce energy use across the country, a move that could also improve Wal-Martï¿½s appeal to the more affluent consumers the chain must win over to keep growing in the United States.

ï¿½The environment,ï¿½ Mr. Scott said, ï¿½is begging for the Wal-Mart business model.ï¿½

It is the environmental movementï¿½s dream: Americaï¿½s biggest company, legendary for its salesmanship and influence with suppliers, encouraging 200 million shoppers to save energy.

For all its power in retailing, though, Wal-Mart is meeting plenty of resistance ï¿½ from light-bulb makers, competitors and consumers. To help turn the tide, it is even reaching out to unlikely partners like Google, Home Depot and Hollywood.

What I would much rather see, for reasons related to both astronomy and radio, would be for people to stop turning on so many lights when they aren't necessary anyway, and otherwise use them intelligently. There is absolutely no need to drown either the inside or outside of one's house with light the way some folks do. There is little evidence that outdoor lighting prevents crime, and considerable evidence that bad lighting can aid crime, cause dangerous glare and loss of night vision, screw up the environment and, of course, also foul up radio communication.

10 per band, for a total of 50. Bands are AMBCB (9/10 kHz), FM and SW 1.7..10, 10..20, 20..30 MHz. (The SW bands are there for convenience only, they dot no reflect in frontend filtering though that wouldn't have hurt. An ambitious modder might be able to do something about that using one of the unused bandswitch sections though.) While strong signal handling on shortwave could be better (the high maximum RF gain emphasises this even more), performance on AMBCB and FM is very good, reflecting the above-average effort put in there. For those interested, there is a schematic (called "service manual") available for the Roadstar TRA-2350P, a rebranded RP2000 (same radio w/o presets).

les radioamateurs abordent souvent la question un peu clichï¿½ des
liaisons lointaines effectuï¿½es avec des tooooootes petites puissances
d'ï¿½mission. pas faux bien sï¿½r, mais comme d'habitude, on a tendance ï¿½
mythifier le passï¿½ et on passe sous silence l'importance primordiale des
antennes qu'on negligeait probablement moins qu'aujourd'hui.

> - sens of radios
non, en 1945 on faisait dï¿½jï¿½ de magnifiques recepteurs comme les
super-pro Hammarlund ï¿½ la fois sensibles et ï¿½ selectivitï¿½ variable.
Tout comme aujourd'hui c'est l'antenne et son dï¿½gagement qui compte.
> - background noise (computers, etc)
Le spectre est plus encombrï¿½. En OC il est difficile de pointer une
antenne dans une direction sans recevoir quelque chose. Le spectre dans
son ensemble est logiquement plus bruitï¿½ qu'ï¿½ l'ï¿½poque, mais pas
vraiment par les ordinateurs.
> - better propagation in 1945 (sun spots etc)
pas plus que d'habitude
> - more sunglasses in 45 ??
des Ray-ban :-)

Il faut aussi ajouter le fait que psychologiquement nous acceptons moins
facilement aujourd'hui les signaux bruitï¿½s et dï¿½formï¿½s dont on se
satisfaisait par necessitï¿½ dans le passï¿½.

Yup, at least as far as broadcasting stations are concerned. There are few more than a dozen AM stations on 120m worldwide, none of them with particularly high power (the Australians with 50 kW are the strongest).

> Not knowing too much about shortwave, and just
> learning now, I had been treating all SW bands equally.

If you want to get into tropical band listening, 60m is the ideal starter's band IMO. You will need a fairly selective antenna with good signal levels to keep the 49m images away (the trusty AN-LP1 works wonders here, in fact I found that it blows away the random wire strung for the AR7030+ on 60 and would allow me to use it at my usual listening location - the bed - so I'll now attempt to either make an adapter to PL or have one made; far better than having this very fine rx gather dust any longer), but then it can be great fun. You may need to stay up late but the result is quite likely to be worth it - here in Germany I usually tend to miss most of the Africans ceasing operation before midnight local time, but later on the usual Chinese suspects will be coming in, then the Indian locals, and finally some Central and South American stations. (WWCR and WWRB also come in, but are less interesting from a DX perspective.)

> there beside the 7600GR that has these features?

Both the ICF-2010 and ICF-SW77 are discontinued now, as is the Grundig Satellit 700 (and the less well performing 500). I don't know what became of this Kchibo thing; other than that one could wait for the Redsun RP3000 which reportedly is ready but production start will depend on RP2100 sales. The DE1108 still is in development so shouldn't be expected any time soon.

The Satellit 800 (nothing much to do with Grundig actually, and Drake SW8 inside) could be an option but is known to be suffering from fairly strong birdies on MW, so best used with an external antenna anyway.

A lot of people who relocate don't want to be toting all their junk around, and storage costs more money than it's worth (not to mention that you risk getting your stuff robbed).

He figures he could just buy another set to replace what he sold.

I wonder if he brought his kitties with him when he went back to Pahrump from Manila. That's what I've been wondering about....didn't even know about his radios.

I can only remember one set that suddenly lost audio, probably the power amp IC failed (greets from bathtub curve). Who knows what the fussy one had.

Ah, indeed, if you preorder the KA2100, you get the KA33 antenna along with it at no extra cost. Given that the rx benefits from a selective shortwave antenna anyway, not a bad idea at all. It remains to be seen of how much benefit the MW part of the antenna is (the rx is no slouch on the built-in ferrite antenna).

Tester schrieb:

> Of course, flourescent bulbs create RFI.

They are still relatively harmless compared to other sources though - move away some 2 meters or so, and their effect is largely gone (certainly when using a magnetic antenna). My parents' plasma TV radiates quite heavily, not like the previous CRT would have been much better - enough to make 20m unusable in any case, and that in quite a distance. My network equipment (particularly switches) isn't that well-behaved either, while the computer itself doesn't emit that much actually. Thankfully dimmers have never been an issue.

BTW, we haven't been using large incandescent lightbulbs for years, except for door lighting where they still make sense as no warmup is needed and operating time is generally small. Otherwise a 20 watt compact fluorescent gives a decent brightness here. Oh, and flicker these things do not, but my cheapo desk lamp with a 20 watt conventional fluorescent and apparently a primitive starter does (which annoys both me and the camera's autofocus). As someone with lousy vision I'm usually not opposed to a bit more light, which with conventional lightbulbs could quickly mean wasting hundreds of watts just on lighting, and that's a bit much. (Even my computer barely tops 100W, monitor included.)

Something that does not seem to be present yet are compact fluorescents with high CRI (color rending index), meaning a more uniform coverage of the visible spectrum. Quite a pity.

I bought something for five dollars at the Goodwill store this
afternoon.It has a circular flouresecent light and a magnafying glass
lens.The light and lens assembly/unit are mounted on an ajustable arm
which is mounted to another adjustable arm for setting the light/lens
assembly at a convenient height,the whole thing is mounted on a stand
similar to a floor lamp.Actually,it is the second such lamp I have
bought at the Goodwill over the years.The first one I gave to my sister
for her sewing room.

I've watched some great college football games in my life, but the Boise State win over the Sooners was the best one yet.
The Boise State coached outcoached the Sooner head coach when it counted. The guts it took to go for the win instead of the tie, and then actually execute that play, was College Football History. I've been watching Boise State for a few years when the show their games on Thursday night ESPN football, so I didn't underestimate them. They never lose at home on that crazy blue turf they play on, but last nights win was the best yet. I'm not taking anything from the Sooners, they did everything they could, but Boise State just never gives up, and last night was the proof that if you want it bad enough, you can somehow get it. We'll be talking about that game for a long time to come.

Those are some of the finest receivers ever made. I have both.
Marvelous radios!

For sheer DX performance, keep the R7A.

For reliability and longevity, keep the 515, it's built better. My R7A
has had components fail, whereas the 515 just keeps on truckin.

221. Think of "The Distance Away" from Sources-of-Noise as being your Friend

Newsgroup: rec.radio.shortwave
Date: 2007-01-03 00:48:53 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1167785333.213574.203580@a3g2000cwd.googlegroups.com>
Source record: 102319

Brian

Think of "The Distance Away" from Sources-of-Noise as being your
Friend.
[Relatively Speaking = Less Noise -and- Stronger Signals]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11850

1 - 10-25 Feet "Away From" The House / Structure.

2 - 10-25 Feet "Up Above" The Ground / Surface of the Stucture.

3 - Combining both #1 and #2 are even better.

As you move the Antenna Element 'away-from' things
that are the Sources of RFI /EMF the Signal Strength
of the Noise becomes Less by the Square of the Distance

Distance and Signal Strength
1-Foot-Away = 1 Unit of Signal Strength relative to 1-Foot-Away

2-Feet-Away = 1/4th Unit of Signal Strength relative to 1-Foot-Away

3-Feet-Away = 1/9th Unit of Signal Strength relative to 1-Foot-Away

4-Feet-Away = 1/16th Unit of Signal Strength relative to 1-Foot-Away

5-Feet-Away = 1/25th Unit of Signal Strength relative to 1-Foot-Away

10-Feet-Away = 1/100th Unit of Signal Strength relative to 1-Foot-Away

15-Feet-Away = 1/225th Unit of Signal Strength relative to 1-Foot-Away

20-Feet-Away = 1/400th Unit of Signal Strength relative to 1-Foot-Away

25-Feet-Away = 1/625th Unit of Signal Strength relative to 1-Foot-Away

Now if the Signal Strength of the Broadcast Signals at each
Distance were to remain the same : Then the Relative
Signal-to-Noise Ratio would run-out like this :

1-Foot-Away = Signal-to-Noise Ratio = 1:1

2-Foot-Away = Signal-to-Noise Ratio = 1:1/2 ~ 2:1

3-Foot-Away = Signal-to-Noise Ratio = 1:1/9 ~ 9:1

4-Foot-Away = Signal-to-Noise Ratio = 1:1/16 ~ 16:1

5-Foot-Away = Signal-to-Noise Ratio = 1:1/25 ~ 25:1

10-Foot-Away = Signal-to-Noise Ratio = 1:1/100 ~ 100:1

15-Foot-Away = Signal-to-Noise Ratio = 1:1/225 ~ 225:1

20-Foot-Away = Signal-to-Noise Ratio = 1:1/400 ~ 400:1

25-Foot-Away = Signal-to-Noise Ratio = 1:1/625 ~ 625:1

The Bottom Line : Distance 'away' from Sources of Noise
is your Friend.

BEYOND THIS IS - The Ever Expand Sources-of-Noise
[Circles-of-Noise in a World Full of Noise]

1 - Starting with the Primary Point-of-Noise
[First Circle of Noise] Remember -It All Begins With You.
= = = Your Very Own House (1X-to-the-X)

2 - Second Circle of Noise
= = = The Houses of your Next-Door-Neighbors (8 X/Distance Away)

3 - Third Circle of Noise
= = = The Houses of your Near-by-Neighbors (64 X/Distance Away)

4 - Fourth Circle of Noise
= = = The Houses within your Neighborhood (512 X/Distance Away)

5 - Fifth Circle of Noise
= = = The Houses and Buildings in your City (16K X/Distance Away)

6 - Sixth Circle of Noise
= = = The Everything in your State (4M X/Distance Away)

7 - Seventh Circle of Noise
= = = The Everything in your Nation (256M X/Distance Away)

8 - Eigth Circle of Noise
= = = The Everything in the World (66B X/Distance Away)

9 - Ninth Circle of Noise
= = = The Everything in the Solar System (4T X/Distance Away)

All That Noise - It's beginning to Boogle-the-Mind

I'm very satisfied with my Tivoli Model One. It has a very pleasant sound, and is reasonably sensitive on FM, which is what I use it for (to listen to FM). I have a C Crane FM Reflect indoor FM antenna hooked to it. But the Tivoli sucks on AM. I can probably hear more AM stations with a brick.

Don't mistake the Tivoli for a serious FM DX machine, it's not. For that I use an SAE T101 FM tuner.

I use 30' of coax to feed a 90' long Windom which is mounted just on top of a 5' concrete wall to the west of the house. The Windom antenna is fed 30' from one end with a 50 to 300 ohm (1:6) impedance transformer and there are no ground stakes, etc. The two windings on the little ferrite impedance transformer are not galvanically connected. This antenna has a noise floor of less than S-1 almost all of the time and is the best receiving antenna I've ever used for 2 MHz and above. My 250' end fed long wire is in the clear but the end feed comes right through the wall with about 2' over to the rig. It has a noise level of anywhere from S-2 to S-5 due to the pickup of the end feed coming into the house. As stated by another poster if you can coax feed the antenna you should do well as long as your immediate property is not cluttered with power lines, etc.

If you heat with resistance heating, the bulbs don't save energy in the heating season.

Leave on all the radios, TVs, computers, lights you want : it all heats the house watt for watt the same as the furnace.

The watts might as well do some useful work first, before they become heat.

(In the summer, it's reversed, and you save double, the second time being reducing the load on the air conditioning.)

Raising the loop will expose it to a farther away horizon so it could
receive a lower angle of radiation.

Raising the loop will also get it farther away from local noise sources
in the house.

What I find disturbing, is that the consumer is seldom warned about the mercury inside the bulb, and when the bulb burns out, they just throw it away in the regular trash.

Before I bought my compact fluorescent bulbs, I made sure I knew where I could dispose of them safely when they were spent. As it turns out, Canadian Tire, where I bought my bulbs, also offered to recycle them. I wonder if Wal-Mart would follow suit.

Most of the foreign made junk (electronics in particular) that Wal-Mart peddles, fill up our land fill sites with toxic time bombs faster than we realize.

I've seen these bulbs and they are very cheaply made. No big surprise
here. I don't expect them to last though and it'd doubtful they meet
safety standards.

If people keep buying them despite the high failure rate, they have NO
reason to make them better. I don't imagine that the majority of users
keep their sales slips in order to get replacements.

On his first show back in Pahrump Art said that it was such a hassle
getting his radio
equipment through customs when he went to the Philippines that he
decided to leave
all his stuff there and buy all new stuff to use in the U.S. My guess
is he will be going back and forth anyway,so he'll have equipment in
both places.Especially once the little space men start to mess with
him.

Home PC,

What is Mercury (HG) ?
What are the sources of Mercury emissions ?
What are the Risks ?
http://www.gelighting.com/na/home_lighting/ask_us/faq_compact.htm
CFLs present an opportunity to prevent Mercury emissions from entering
the Environment because they Help-to-Reduce Emissions from Coal-Fired
Power Plants. A Coal-Fired Power Plant will emit 13.6 milligrams of
Mercury to produce Electricity required to use an Incandescent Light
Bulb, compared to 3.3 milligrams for a CFL with the same light output.

Coal fired plants not only emit mercury; they also spew more
radioactive waste than nuclear plants.

I bought my first CFL a few weeks after I bought this house in 1994.
The bulb in the basement stairwell burned out, and it was such a pain to
change I decided I wanted something that would take awhile to burn out.

Had to replace it last week. (yes, that's **twelve years** service!)

Since then, as each bulb has burned out, I've replaced it with a CFL.
Can't say I've had significant noise trouble. Sure wish I could say the
same for my computers!

It's hard to get past the price differential, but if you can, you'll
like 'em...

Important Note: Handling and Disposal of CFL's

Compact fluorescent bulbs contain small amounts of mercury. The mercury poses no threat while in the bulb, but if you break one be careful not to inhale the mercury - immediately use a wet rag to clean it up and put all of the pieces, and the rag, into a plastic bag.

Although household CFL bulbs may legally be disposed of with regular trash (in the US), they are categorized as household hazardous waste. As long as the waste is sent to a modern municipal landfill, the hazard to the environment is limited. However, CFL's should not be sent to an incinerator, which would disperse the mercury into the atmosphere.

The best solution is to save spent CFL's for a community household hazardous waste collection, which would then send the bulbs to facilities capable of treating, recovering or recycling them. For more information on CFL disposal or recycling, you can contact your local municipality.

Although CFL's have these handling and disposal issues, the large energy savings of CFL bulbs compared to incandescents is of greater overall environmental benefit.

www.devilfinder.com Radioactive Coal

The whole Universe is Radioactive.Even we ourselves are Radioactive to some extent.There is some Lignite Radioactive Coal being mined in Northeast Mississippi (or somewhere around that neck of the woods) for a power plant there and there will soon be some more Lignite Radioactive Coal Mining going on in East Mississippi in Kemper County near Meridian.(or somewhere around that neck of the woods) What they are going to be doing with that Lignite Radioactive Coal is turning it (the Lignite Radioactive Coal) into liquid fuel for cars.trucks,vans,soccer mom's suvs,and who knows what else.Some of that nasty Radioactive Coal in China blows on over to California.Heck of a note,isn't it? California is trying to reduce pollution and China is sending California more pollution.

A very good point. IIRC to get a certain amount of heating power out,
you have to invest another 100..200% of that (!) into A/C.

Transmitter power increased a great amount with the propaganda broadcasts of the 1940s. The broadcasters wanted the programs to be heard by as many people as possible and few of those people had excellent antennas and radios.

Now that's awfully cheap. I can't imagine that these are of particularly high quality. They'll probably still outlast several incandescent bulbs (medium lifetime ranged from 4500 to >19000 hours in a German review), but may lose more brightness over their lifetime or endure less switching cycles than more expensive lamps. They may still be good enough to get people interested though. And indeed, these things must be recycled properly when they fail, like any fluorescents.

I've installed a few CFs in my apartment. They do create a bit of RFI, but they aren't too bad. The ones I have are much quieter than the computer, the TV and nearly all the rest of the switchmode supply stuff.

My CFs are far more quiet than all the damn lamp dimmers which plague this area.

Quantum Loop, covers AM BCB Band, as new cosmetically and electrically.

Has Quantum Coupler which can be used with any receiver with a ferrite loopstick antenna to couple it to the Quantum Loop.

More info here: http://www.dxtools.com/QXv2+.htm

This is not the 2.0 version, but the earlier version w/o the led on indicator.

$ 175.00 includes shipping/insurance. No overseas shipments.

Not just the Commies. The "Capitalists" would, in turn, increase the
power of THEIR transmitters in order to out-do the Commies....and
possibly even jam them.

Look at the battle between American and Cuban AM stations in Florida.
Supposedly they step over each other all over. On purpose.

Steph

And surely the jamming that went on caused transmitter power to increase.

Reminds me to the police radar and radar detector battle.
Introduce a radar unit.
Counter with a detector.
New Ka band unit
Ka detector
Instant on/photo radar
instant on detector
LIDAR
LIDAR detector
and so it goes.

A friend jokes that the major police radar companies own the major
detector
company and create their own arms race.

Or look at the virus / antivirus battles.

Canada has not authorized HD... all they did was open an inquiry and study.

287. Interference on Radio when recording to plugged in laptop

Newsgroup: rec.radio.shortwave
Date: 2007-01-04 00:02:14 UTC
From: Mike Chambers <mikechambers@gmail.com>
Message-ID: <oggop21ra219gfi3dm1gm4otrjcrmha2sb@4ax.com>
Source record: 102236

I have an Eton E5 which I connect to my laptop via the Line Out on the Eton to the Line In on the laptop.

This works great for recording shortwave broadcasts, but if the laptop is plugged in, it generates some interference on the radio (only when they are connected via lineout / in). If I unplug the laptop, there is no interference.

Does anyone know if there is anything I can do to get rid of the inteference? I want to set up my machine to record programs overnight, so I can't leave the laptop unplugged.

Yes, they have:

http://beradio.com/eyeoniboc/canada-allow-hd-radio/?cid=topstory122706

And, all they would have to do, is the samething with the FM
translators, because they have issues with nighttime AM IBOC:

http://americanbandscan.blogspot.com/2006/12/digital-radio-in-canada.html

How about a real long line in cable? I got lots less noise when recording into my laptop when I could get the radio farther away.

[...]

I have to admit to ignorance here. Who exactly are the Masons, what do they do, and why do so many people have their skidmarked panties into a twist over them? I know that they're a semisecret men's organization associated with the Catholic Church, that they wear fezzes, and that the oldest ones wear fezzes, get drunk, and ride tiny little cars in parades. That's where my knowledge ends. Yes, I'm sure there are any number of Web sites; executive summary, please.

I went to a Masonic funeral a decade or so ago, when a friend's father died. Weird. The deceased's casket was sitting up front on a pair of sawhorses (I assume; the supports were covered with cloth) on a raised section of floor at the front of the funeral home -- not in the Masonic Hall for some reason. All of his brother Masons were wandering around wearing aprons. I didn't know about the apron thing at the time, and so my immediate thought was, "What are they going to do, make some pizza?"

Incidentally, I share Hasaam Poo-Baghdad's incredulity over how long the whole Gerald Ford Death Pageant is taking. Isn't ol' Jer' starting to get a little bit ripe by now, much like the Jack O'Lanterns I insisted on keeping around as a kid until they sagged into a puddle of juice, their eyes filled with mold? Looking back on it, it was an interesting experience scarfing down my Cheerios with something like that grinng at me from the middle of the dining room table. The smell was indescribable.

You have a ground loop. Get an isolation transformer, say
Radio Shack 270-054A about $15, and insert it in the connecting audio
cable.

297. NEW FSK like signal on 455.4KHz

Newsgroup: rec.radio.shortwave
Date: 2007-01-04 02:08:32 UTC
From: r2000swler@hotmail.com
Message-ID: <1167876512.778060.291890@31g2000cwt.googlegroups.com>
Source record: 102246

Been testing a new antenna and found a "new" FSK like S4 signal on
~454.5KHz.
It isn't DGPS and has about .8S data with a .2S synch mark.
Anyone else hear this and does anyone know what it is?
LF isn't my bag and I was only seeing how well the new antenna works.
Lexington KY, R8B, with an experimental tuned vertical.

On Wed, 3 Jan 2007 20:53:42 -0500, Geoff Miller reached into its ass and pulled out (in article <12ponh62491ce1e@corp.supernews.com>):

> I have to admit to ignorance here. Who exactly are the Masons,
> what do they do, and why do so many people have their skidmarked
> panties into a twist over them? I know that they're a semisecret
> men's organization associated with the Catholic Church, that they
> wear fezzes, and that the oldest ones wear fezzes, get drunk, and
> ride tiny little cars in parades.

Actually, wrong on two counts. The Catlick church opposes Freemasonry, although the Masons supposedy welcome Catlick men as members. (The Mel Gibson brand of Papist is known to mutter darkly about priests who are secret Masons.) And the ones with the fezzes etc. are Shriners.

Not that Wankypedia is an authoritative source, but it's a start: http://en.wikipedia.org/wiki/Freemasons

The article mentions the Illuminati and the "New World Order," so my guess is that any Googling you might choose to do on the subject will turn up a fair number of tinfoil-hat nutjob links.

I can assure you, the Illuminati as they are rumored to exist (the
beneficiaries and decedents of the original "money lenders" in the
temple Jesus taught in) are a myth--they are only a kindly group of
knitters in Ohio. Honest! Want 'em to knit a pair of slippers for you?
All you gotta do is request it!

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=190068759338

Please e-mail any questions, I am devoted to radio and not a snob nosed knowitall. Love to hear from anyone in Delaware. The Loop Antenna on Ebay is one of the best and I have a vast knowledge and first hand use of many types of antenna's from Loops to Beverages. I am a member of the NRC and have heard Kuwait (1548Khz) using this antenna from my backyard deck. I have a K9AY Loop antenna which is why I am selling and also because DX'ing from the car is often cumbersome. I have a cigarette lighter plug that works with the positive tip interface. (Comes with wallwart) During the day groundwave signal were heard from Newak, Delaware to Detroit's WJR. I hope you will be inspired to bid. This antenna does a lot and I don't want to be too wordy.

Mike

I have nothing but compact fluorescents and some are way over 5 years
old. I've changed the kitchen overheads once since 1998. It's insane
to use Edison lamps for lighting.

I find that the Internet is a poor place to ask about these topics. Every conspiracy nutjob on the face of the planet has a postion on so-called 'freemasons' and their alleged control of everything that the Jews don't already own.

I read somewhere that the apron is part of the traditional mourning dress of Masons, and is used to keep mortar off their dress clothes when they build the secret Masonic mausoleum around the body of the deceased after the burial service.

Pumpkins will keep almost indefinately if you paint them with a few coats of shellac right after they are carved out. I prefer a matte finish, while some like the glint of a high gloss; but then you have to dust them off more often.

Powdered sulfur is extremely good at binding any elemental mercury that
might have "blobbed" over an area. But don't use a vacuum cleaner to
clean it up (unless it's rated for mercury vapour containment). Use a
brush and pan and place the remains in a thick plastic bag.

Actually YER wrong about the fez hats--Masons do indeed wear 'em. :-p
The "etc." yer right about, tho, Masons don't drive the little cars...
(Well, maybe some of 'em do in their free time--everyone has hobbies)

My dad, my uncle, and my cousin were masons at one time, and they all
sported fezzes in each of their "official Mason portaits" (done at Sears, of
course) that we had displayed on the walls.

Back in the early 1970's,the J.C.Penny store that used to be in down town Jackson moved to a new store about two and a half miles from me.Then when the new Northpark mall www.visitnorthpark.com was built in 1983 the J.C.Penny store that was near me moved to Northpark mall in Ridgeland,just across County Line Road which is the North boundary line between North Jackson and the suburb city of Ridgeland.

Before the J.C.Penny store which used to be near me moved to Northpark mall,the store had a sale on a lot of thingys.I bought a little flourescent twin tube/light at the store.I wrote the date of when I bought the light with a ball point pen on the base of the light just before I started using it in my bathroom.I know I didn't throw the light away when it burned out.I was looking for it just now in my bathroom cabinets.(it's there somewhere among all that junk in there) But I did find the bulb thingy,it says Philips PL 9

I know the little flourescent light bulb lasted at least fourteen years since 1983 before it finally burned out.And I always leave my bathroom light turned on wether I am home or not.That was a durn good little light.When I find the other part of the light assembly/unit the two prong bulb plugs into,I will see if I can find a replacement bulb.

I did a search for, What kind of radio was used in The Andy Griffith Show The Gypsies

I haven't found anything yet.I think it was a Hallicrafters.Of course it was probally a movie studio prop radio that somebody rigged up and dubbed in the audio for the radio.In the show,it was a battery powered radio.

I found the other part of my old fluorescent light in my bathroom cabinets.It says,PHILIPS.Adapter for PL 7 or PL 9 120 V 12 Watts Made in U.S.A. B4 Listed UL Adapter E77629 43L2 Pat.Pending Cat # 34888

The whole light assembly is actually three seperate parts.The adapter with the screw in base part on it slides/connects up to what I assume is the ballast and the light bulb which plugs into the adapter makes it three seperate parts.If I happen to see a replacement light bulb at a local store,I will buy it and see if I can get it all working again for my bathroom.

I have a bunch of old,old electrical thingys here.One of them is an old light dimmer.It says on it, Mil-L-12313A Bristol Dynamics,Inc Dimmer,Lampholder Made in Brooklyn,N.Y.120V 60 Watt
It has a red two position slide switch on the side for Dim Bright.I think it dates back to the 1950's.I tried it out in one of my table lamps,but it doesn't work.(maybe that's why it showed up at the Goodwill store) If I wire brush the crud off of the screw in base,it might work.

Cross-posted to: alt.slack,alt.tasteless,rec.radio.shortwave,alt.freemasonry

The best place to get the unvarnished truth about freemasons such as
Gerald Ford, members of the Grateful Dead, Bill Clinton, Trent Lott,
and others is here:

http://www.freemasonrywatch.org

Just follow the links at the top of the page. There is a great photo of
freemason Geral Ford, who covered up the Kennedy assasination in
exchange for being apopointed President, the only unelected President
fo the US.

Freemasons also founded and still run to this very day the Ku Klux
Klan. The first leader of the KKK was Freemasonic legend Albert Pike,
whose body is buried under the stairs of the Grand Lodge ion Washington
D.C. There is a statue of Pike outside the justice Department buidling
in D.C.

http://freemasonrywatch.org/kkk.html

http://freemasonrywatch.org/albertpikestatue_mustfall.html

They also founded other racial chauvinist groups like Mecha and La
Raza, and Louis Farrakhan's Nation of Islam.

Hello, you can also get some noise-reduction ferrite core, such as this :

http://www.shinemicro.com/images/ferritethumb.jpg

Perhaps you have some already clamped on some device's wire (digital camera, AC/DC tranformer, modem, etc...).

If you can un-clamp one a clamp it on your laptop power wire OR audio line wire, just check if it helps...

I did that on my AC/DC adapter of my SW radio, and it helps reducing (a little) incomming RFI.

Charly

Around here they don't bury the lamps. You turn them in at a HHW
facility (or at a semi-annual roundup) along with your batteries and
used chemicals and motor oil. It is illegal to put mercury in the
trash, period.

Hi. I admit I am a radio buff and have been interested in this radio for some time. I like that it's in stereo, and that it gets HD stations and/or regular stations. The radio will seek only the HD stations if I want. Sangean makes good radios and I am looking forward to trying this one out. J&R priced matched for me $229 with a $50 rebate. Please post all of your opinions, positive and negative. Dont be shy: if I don't like the unit, I will send it back.

Yes, but, of course, the problem is that when the mercury from bulbs is placed back into the ground/water, it is greatly more concentrated than when it was mined, where it was also locked up in the ore. It is the artificial purification / concentration / juxtaposition that makes it dangerous.

However, it is also true that most people are becoming far more careful about they dispose of toxic materials. Here in the SF bay area, we have fairly convenient hazardous waste centers who will accept this stuff free at disposal time. About once every two years, I bring a small batch of nasty material there, and in about 1 minute it is off my hands. The material is then either reclaimed or disposed of in a palce where it hopefully will be safe for 1,000,000,000 years.

> please.

Freemasonry is a fraternity that has existed for several hundred years. It's members profess a belief in the Supreme Creator, but Freemasonry makes no attempts to define Deity; it's best left in the hands of a Church, Synagogue or Mosque.

The tenets of Freemasonry are Brotherly Love, Relief and Truth, and encourage upright and moral living.

The Catholic Church, as well as some other religions, oppose Freemasonry for several reasons, but primarily because we encourage freedom of religious choice, public education and we keep certain matters out of public purview (our secrets, if you will, things like modes of recognition, business records and the like).

Shriners wear a fez, and they often perform in parades. One must be a Mason to become a Shriner, so it is easy to assume that Masons wear fezzes. The Shrine is sometimes called the Mason's playground because the rituals and ceremonies are much more lively than the serious and solemn ceremonies of Freemasonry.

Freemasonry has long served as the scapegoat of many conspiracies because of a long-standing policy of ignoring the baseless claims. Some of our detractors have found the Internet helpful in spreading their claims, and Freemasons use the same medium to offer factual refutation. Of course, there are still claims related to certain private parts of our ceremonies, and our obligation prevents us from citing relevant facts.

> brother Masons were wandering around wearing aprons. I didn't
> know about the apron thing at the time, and so my immediate
> thought was, "What are they going to do, make some pizza?"

Interesting that one would think of pizza being served during a funeral. The apron is the badge of a Mason. Operative Masons wore aprons to protect their clothing from damage while they worked with stone, and sometimes to carry their tools. Speculative Masons wear the apron in a clean state to show the cleanliness of their life. When a Mason dies, his apron is draped on his casket as a symbol of his purity. Masons rarely wear their aprons outside Lodge, usually for Masonic funeral services, when attending Church as a group or when commemorating a cornerstone.

There is much more information about Masonry online. A FAQ is posted every Friday at 08:00 Pacific to alt.freemasonry. The Grand Lodge of British Columbia and Yukon has much information at http://www.freemasonry.bcy.ca/info.html. Gary Dryfoos also has a lot of information at http://web.mit.edu/dryfoo/Masonry/. And you're always welcome to post questions at alt.freemasonry if they weren't answered elsewhere.

My next oldest sister (I am sixty five,she is about three or four years older than I) and her hubby are Shriners.They get to a big Shriners convention usually once each year.I really know little about Masons and Shriners,of course there is much about that they could tell me.She is a member of the Red Hat Society too,but that isn't anything much ado about Masons and Shriners.She and her hubby are going to start selling some of their old collectible thingys on eBay,her daughter will be handling the computer work pertaining to that.

When an ALE signal is tuned in on a AMS radio it sounds kind of like a
babbling brook.
In SSB it is much harder to discrib but it sounds like a bubbling
flute, bad discription, but the best I can do.

A number of digital carriers in a very small spectrum. It is very hard
to discribe a sound.
With the proper decoding software clear charactors will be displayed.
The charactors
may be plain text or encrypted.

The small LCD provides a digital frequency readout. The MP3 provides an analog display in addition to many other features. This is from second-hand info. Both the MP3 Recorder and the Radio base for it can operate independently.

That's why I figured he'd prefer a radio that was free of the HD
capability. He could put his money toward other features. But, to each
his own...

368. Are there other Shortwave schedule listings available?

I am currently using Radio Explorer with Prime Time input data.

I realize that I could think up a country and try the internet to see
if they broadcast but a TV guide version of Shortwave would be nice.

Are there other Shortwave schedule listings available?

hi,

i'm noticing a discrepancy between the s-meter readings of these three radios. all three radios are connected to the same antenna for the test and signals can be heard equally well on all three, but the kenwood r-5000 always has the highest signal levels, by quite a bit - followed by the palstar and then the drake. the palstar and the drake are the closest. when i turn the pre-amp on the drake closes in on the palstar, but still a little low. are s-meter readings standardized - is this a fair way to test for a radios sensitivity.

373. (OT) Social Security for illegal aliens

Newsgroup: rec.radio.shortwave
Date: 2007-01-05 02:13:50 UTC
From: William <Wdonnelly@windstrong.net>
Message-ID: <10b63$459db464$471ccda3$27147@ALLTEL.NET>
Source record: 102370

The Washington Times
www.washingtontimes.com

Social Security for illegal aliens
By Stephen Dinan
THE WASHINGTON TIMES
Published January 4, 2007

An agreement the Bush administration reached with Mexico on Social Security benefits would allow illegal aliens granted amnesty in the future to claim credit for the time they worked illegally.

The deal was reached in 2004 but never released publicly because it hasn't been submitted to Congress. The TREA Senior Citizens League, a Social Security advocacy group, recently obtained the document through a Freedom of Information Act, and said it confirms the group's worst fears.

The document is a jumble of definitions and legal language, but a spokesman for the group said what's important is what's not in the text: It does nothing to prevent undocumented aliens who later get legal status from receiving benefits for the time they worked illegally. And that comes as the Social Security system's finances are about to be put under greater strain by the retirement of baby boomers.

"If you open up the trust fund to people who have been working in the country illegally for many years, that bankruptcy date can only come sooner," spokesman Brad Phillips said. "People on the other side of this, people who have been arguing that of course illegal aliens can't get their hands on Social Security benefits, now can't make that argument easily anymore."

But Mark Lassiter, a spokesman for the Social Security Administration, said the agreement doesn't change U.S. law. The law states that those who do not have authorization to work will not get benefits under a totalization agreement.

"To get Social Security benefits, you do have to be legally in the United States. This agreement does not address in any way immigration, immigration laws or override current law," he said, adding that a 2004 law, the Social Security Protection Act, prevents illegal aliens from getting benefits.

But the seniors group said the 2004 law also states that if those aliens later get legal status -- through an amnesty or some sort of legalization plan such as the one President Bush and the Senate tried to enact last year -- they would be able to collect the benefits based on their time as illegal workers.

The deal has not taken effect because Mr. Bush has not signed it or

submitted it to Congress. Once he does, Congress would have 60 days to vote against it or it automatically would become law.
Congress has never defeated any of the 21 other totalization agreements the United States has reached. Most of those have been with European nations, with the financial effects known to be smaller.
Some lawmakers say Mr. Bush has not submitted the agreement because it would get caught up in the debate over Social Security's poor fiscal health, which could doom the measure.
Totalization agreements end double taxation, so workers have to pay only into one country's system, and allow a worker who didn't have enough credits in any one country to qualify for benefits to pool his or her credits. In the United States, it takes 10 years, or 40 quarters, to qualify.
Mr. Lassiter said that's not to say Mexican workers who spent less time, such as the six quarters minimum needed to pool credits, would get benefits equal to someone who had worked his or her full life here.
As for the document's status, he said the Social Security Administration hasn't submitted it to the State Department because officials are still waiting for the Mexican government to help reach a side agreement on how to treat illegal aliens. The United States sent a diplomatic note trying to clarify the situation but has not heard back from the Mexican government, he said.
"At this point, there's no action that is planned or that will be taken until that process goes through," Mr. Lassiter said.
Rafael Laveaga, a spokesman for the Mexican Embassy in Washington, said the agreement has to be ratified by the Mexican Congress as well, but beyond that he had no details to offer.
The issue has been contentious for several years.
A 2003 report by the General Accounting Office, Congress' investigative branch, said the agreement with Mexico was shoddy work that didn't investigate the reliability of Mexico's data, or take into account the millions of illegal aliens who would become eligible.
The GAO also disputed the Social Security Administration's estimate that the agreement would cost $105 million a year for the first five years, saying the costs could be much higher given the uncertainty of who could benefit.

Yes and no.

Some radios have the same sensitivity and the relative S-meter reading,
which is usually a reading of the AGC circuit would be of a similar
value.

Radios of dissimilar sensitivity would not normally have the same
readings.

An exception would be radios that have a signal strength meter in dBm,
which is an absolute scale.

actually the palstar and the drake scales are in Decibels, while the
kenwoods scale is in Db at the top and millivolts at the bottom. also
before anyone asks my rf gain is fully clockwise on both the drake and
kenwood. the palstar doesn't have a rf gain control.

Dear Brian,

I strongly recommend that you purchase the World Radio TV Handbook.

Go here: < http://www.wrth.com/index.html > to learn more.

Along with Passport to World Band Radio (as well as Popular
Communications and Monitoring Times magazines) this book - like
Passport, published yearly - is, in my opinion, indispensable.

In the summer WRTH updates their schedules online and for free.

The other free online services (PrimeTimeShortwave, etc.) are very good
too, but only as supplements to the two books. The books contain far
more broadcast information than is currently available online and books
are inherently easier to use.

As always, my opinions only.

Best,

Joe

No. decibels where 0 dBm = 0.001 Watt or 1 milliwatt. However in a 50
ohm system the equivalent would be 225 millivolts.

The RF gain control just sets maximum sensitivity of the radio and does
not change the gain of the radio so by turning all the way down you are
at the radios published maximum sensitivity. As you turn it up you are
desensitizing the radio. If you turn the control so it rests at S3 then
you would only be able to hear signals greater then S3. The AGC would
work on signals higher then than S3. The radio will behave exactly the
same for any signal greater than S3.

You can't even be sure identical radios will have the same S-Meter
readings, in most cases. The reading is pretty meaningless, except to
compare antennas, or if a preselector is used, to adjust for max
reading.

"Opening Up the Conversation - talk radio new formats to attract new
audiences"

"Talk radio is still tremendously popular, capturing 17 percent of all
listeners during a given quarter-hour period, a share that has remained
stable over the past few years. Radio talk show hosts wield enormous
influence... Talk programs also tend to be more expensive for
advertisers than music formats... Talk has consistently been among the
top three formats in terms of converting audience share to revenue
share."

http://www.findarticles.com/p/articles/mi_m4021/is_2001_Oct_1/ai_79052842

Too bad, looks like AM talk-radio is doing just fine, in the US !
Just, talking out of your ass !

BDK, that makes total sense - especially if you are comparing antennas.
so what your saying is that its a reference point for that given radio
and should only be used as such.
like i said the signals on all three radios sound just about the same -
its not like the kenwoods signal is stronger sounding. in fact i think
my r8 has a slight edge at digging out the weak ones over the r-5000.
the r8 is a great radio.

so a stronger s-meter reading on one radio indicates the more sensitive
radio? in this case the kenwood?

It could. Like I posted earlier the readings would be comparable if the radio has an absolute scale such as dBm instead of a relative scale.

How do you figure that this is nonsense? Typically, SWL radios would have their S-Meter calibrated at 14MHz, so that S9 would equal 50uV. You are correct when you mention S-Meters that are calibrated in dBm as being absolute, as long as the system in in calibration for gain distribution, etc. Receivers that have this function do provide for setting up the gain distribution.
Now, the mystery continues.....what exactly do you mean by the following statement?

"The RF gain control just sets maximum sensitivity of the radio and does not change the gain of the radio so by turning all the way down you are at the radios published maximum sensitivity. As you turn it up you are desensitizing the radio."

The above statement, in quotes, is a new one to me. Could be showing my young 54 year old age. The RF gain control only sets the maximum sensitivity of the radio when it is controlling the bias to the RF stage in addition to the I.F. stages, and this usually isn't the case, except for some of the older tubed equipment.
Most RF gain controls USUALLY only set the gain of the I.F. stage. This has nothing to do with the sensitivity of the system, if we are talking about noise figure (I realize that you didn't mention that, so I won't put words in you mouth on this one).
When you turn up the RF gain control, you don't desense the radio, but you do give the AGC loop more gain. Maybe this is what you meant.

Pete

If the radio has a meter that is calibrated in dBm, it should have identical readings with another radio that has a meter calibrated in this manner. But.....it is possible that one of the radios can hear weak signals better. Most of the radios that have an S-Meter calibrated in dBm are millitary radios that are built to a certain spec. True, there may be some differences in perceived signal quality, but generally, you can take a Rockwell HF-2050, HF-8000 series, a Harris RF-590, Racal 6790, a WJ 8718, and they will all sound very similar. The design spec is going to call for a certain amount of gain, overload rejection etc. If the receiver doesn't meet these specs, the manufacturer can lose the contract.

Thanks for sharing your review; I linked to it. Are you familiar with the Sangean/C.Crane versacorder? It's a cassette-based recorder that supports scheduling the recordings. I don't have one, but it would be interesting to hear how the experience compares between the 1121 and the versacorder.

- The small LCD provides a digital frequency readout.
- The MP3 provides an analog display in addition to
- many other features.
- This is from second-hand info.
- Both the MP3 Recorder and the Radio base for it
- can operate independently.
-
- Tom

The "Sub' - LCD is only four (4) Digits which would be OK
for a Clock and AM and FM Frequency Read-Out. -But-
not very handy for a Shortwave (HF) Frequency Read-Out.

AM : 530 - 1710 {kHz}

FM : 88.0 - 108.0 {MHz}

Shortwave 5.125 (ok) -but- 13.12_ (?) {MHz}

IMHO this could have been solved by using a little bit bigger
Six (6) Digit 'Sub' - LCD Display 12:34 AM/PM which would
have then allowed :

AM : 530k - 1710k {kHz}

FM : 88.0_M - 108.0_M {MHz}

Shortwave 5.125M (ok) -but- 13.125M MHz (ok) {MHz}

I guess my focus is on "The Radio" part of 'The Radio'
and not the MP3 Gadgetry affixed to 'The Radio' ~ RHF

Sangean announces HDR-1 Table Top HD Radio Receiver
http://www.engadget.com/2006/09/19/sangean-announces-hdt-1-hdr-1-hd-radios/

Per Universal-Radio - The Sangean HDR-1 is a Table Top Radio
http://www.universal-radio.com/catalog/spcialty/0111.html
Is capable of both AM and AM-HD {High Definition} Stereo Reception
-and- FM and FM-HD {High Definition} Stereo Reception.
- - - Hummm AM-HD Stereo ? ? ?

Diagram of the Controls and Back Panel of the Sangean
HDR-1 Table Top HD Radio Receiver
http://www.universal-radio.com/catalog/spcialty/0111cont.html

Sangean on the Sangean HDR-1 Table Top HD Radio Receiver
http://www.sangean.com/product.php?model=HDR-1

Owner's Manual [PDF] Sangean HDR-1 Table Top HD Radio Receiver
http://www.sangean.com/downloads/manuals/HDR-1_MAN.pdf
Oops - This is one of 'those' Radios that requires the
Remote Control to make it fully functional - But that's
OK cause I got a whole drawer full of remote-control
things and most even go some batteries in'em.

Advertising Flyer [PDF] Sangean HDR-1 Table Top HD Radio Receiver
http://www.sangean.com/downloads/flyers/HDR-1.pdf

Also there is the Sangean HDT-1 AM & FM "HD" Componet Tuner
to up-grade your Home Stereo System to High Definition Stereo.

John,

Dispite the differences in the "Relative" S-Meter Readings

WHAT DO YOUR EARS TELL YOU ? ? ?

Take the same three receivers and tune to Three
Strong Signals and Three Weak Signals :

Record the "Relative" S-Meter Readings for each
according to the Receivers -Plus- Record your
Ranking #1 {Better}, #2 {In-Between}, and #3 {Least}
Listenable Signal for each Receiver.

Radio's beyond the technology and gadgetry . . .
Radio's are simply about Listening -and-

BpnJ,

ABOUT - Mercury
http://en.wikipedia.org/wiki/Mercury_(element)

Organic Mercury Compounds {Methyl-Mercury} Meta-Mercury ?
http://www.greenfacts.org/glossary/mno/organic-mercury-compounds.htm
IIRC - When they build a Dam {Reservoir} one of the things
that they have found that they need to do is remove all the
Trees and other Vegetation : Because most of it has some
Organic Mercury in it and as it Decays under the Water and
is Consumed by the Animals, Plants and Fish in the Water
the Organic Mercury then enters the Human Food Chain.
http://en.wikipedia.org/wiki/Reservoir_(water)

Scientific Facts on Mercury {Q&A}
http://www.greenfacts.org/mercury/index.htm

Mercury and its Many Forms
http://www.calpoison.org/public/mercury.html

While CFL Bulbs do use and consume Mercury via Electrical
Generation. Over their Rated Service Life they us less Mercury
then the same number of Incandescent Bulbs required for that
CFL's Rated Service Life period that have the same Rated Light
Output : Because they use much less energy and the production
of Energy results in the by product of Mercury in our Air and Water.

CFL Bulbs are still better for the Environment then the older
Incandescent Bulbs - imho ~ RHF

Wouldn't that make it an IF GAIN control?

A while back I read a review by the ARRL of a transciver and they brought up an interesting point. Modern receivers have enough gain to "hear" the normal background noise, so beyond that it really does not matter.

In my environment the noise is so high that almost anything can hear it, my R-5000 often hears S9 level background noise on 40m and nearby SW bands. (5-10mHz).

Geoff.

The thing I'm worried about most is reception. I'm hoping that Sangean, famous for its good reception, has produced a HD radio that is very selective and sensitive.

I can't say this with any real degree of authority, but if this radio
follows the trend that most have, the analog AM and FM are really
afterthoughts, and Sangean concentrated on the "HD" part of the radio. This
in the same way that HiFi stereo systems concentrated on the FM tuner and
pretty much just put whatever would pick up your local stations on AM.

The RF gain control can be very handy for reducing noise to the point
where SSB voice comms sound extremely HiFi.

Hmm, okay. I don't know where I got the idea that Freemasonry had a
connection to Catholicism. Thanks for setting me straight.

> Interesting that one would think of pizza being served during a funeral.

I was being facetious; I didn't literally think it would be. But like
most people, I've seen aprons far more often in kitchens than I have
elswhere, so the association of them with food was a natural one.
Besides, I happened to work at a pizza parlor at the time.

When I think of workmen's aprons, I envision the full-length sort, not
the kind that only extend from the wait to just above the knees. It
was the latter sort that the Masons at this funeral were wearing. They
were also of white linen, like the aprons that cooks wear.

Thanks for the reply. Here is how Sangean advertised this radio: "It
features the superior reception Sangean is famous for along with an
acoustically tuned wooden cabinet creating improved bass response and
the most realistic...."

So, I do hope the reception is pretty good.

Thanks for this.

> While CFL Bulbs do use and consume Mercury via Electrical
> Generation.

Not exactly - they contain mercury and it is part of the
light-production process. No mercury is consumed - the lifetime
starting mass is equal to the lifetime ending mass.

> Over their Rated Service Life they us less Mercury
> then the same number of Incandescent Bulbs required for that
> CFL's Rated Service Life period that have the same Rated Light
> Output : Because they use much less energy and the production
> of Energy results in the by product of Mercury in our Air and Water.

How so? How does energy consumption and production result in
signficant mercury release?

In any case, a CFL bulb or any other FL bulb concentrates mercury in a
way that few other products will nowadays. It is this concentration -
possibly within reach of a person and their skin/mouth - that presents
the problem. There may be a great deal of mercury out and about in the
environment (and it also concentrates at the top of the food chain, in
fish especially), but in minute forms and scattered as it is, it is not

likely to affect any individual if that individual is careful not to ingest high-merc foods.

Thanks, I'd forgotten about the versacorder. Since it uses cassettes,
it wouldn't serve my needs as well. Archiving mp3s is a snap, and I
like to load up my iPod with mp3 boradcast recordings to listen to on
trips. However, I suspect that the versacorder would probably be a lot
easier to use.

Pardon me, is the "Sangean/C.Crane versacorder" equivalent to the
"Sangean ATS 818 ACS" ?

Thx

Charly

Now THAT would be nonsense.

Even supposedly identical receivers have differing S-Meter readings. You can set the meter level to whatever you want. They supposedly are normally calibrated to something like S-9 = 50 Microvolts. Supposedly. But like any other adjustment, it can be off.

Wanna bet? In most cases, side by side, identical models have different
meter readings. Usually it's slight, but sometimes it's huge. My JRC
NRD-515 has a "tight" meter. SSB audio can be clearly heard with the
meter at the left peg. Another 515 I had here for interconnect repair
was just as sensitive as mine, but the same signal would read S-2 or 3.
Same thing has happened with Kenwood R5000's, R2000's, and JRC NRD-525s.
```

(The first ones had a "spastic" S-Meter, later ones were cured of this)

In "pro" radios it might be true, but in hobby receivers, it's not true that S-meters have any real correlation with signal strength in comparing one radio to another.

Sometimes, the receiver is picking up it's own CPU hash, or display hash. The early NRD-525's are somewhat bad on this. Later ones seem to have partially solved it. Any hobby class radio with a fluorescent display usually has audible hash someplace in it's tuning range.

My R5000 was hammered by the nearby country station on 1560. If you couldn't hear images and spurs, there was a lot of hash below 7MHZ when it was on (days only). It was hugely strong, traveling down the nearby power lines. On most of my receivers, there would be an S-Meter reading with no antenna connected at all. If I walked over to the receiver, it would peg long before I touched the antenna connector. I built a couple of AMBC killer filters from plans I found in a ham book, and it made a huge difference. When the station redid it's grounds, after the owners of neighboring houses started complaining that toasters, TV's, and anything else that plugged in the wall was playing music at times.

That dropped the signal greatly here, I was able to remove the AM killers on all my receivers except the R5000, it still had hash that kept beat with the songs below 7MHZ, and on a few freqs I could hear the audio in the background on AM stations.

I have for sale a B&K Dyna Quik Model 500 Tube Tester, SN 11383. It has a tube chart in the inside of the top cover, but no manual. It appears to be is working sometimes. I tested some tubes and some gave me a reading, but on others, I got no readings. I think some of the tube sockets may need cleaning. It also needs the ac pilot lite replaced. Cabinet is in fair condition. Price is $40 plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Sorry about that, I was having a bit of fun.

> When I think of workmen's aprons, I envision the full-length sort, not
> the kind that only extend from the wait to just above the knees. It
> was the latter sort that the Masons at this funeral were wearing. They
> were also of white linen, like the aprons that cooks wear.

Operative Masons, pizza chefs, and many trades workers use a much
larger apron so that their clothes won't be dirtied or damaged in the
course of doing their job. Speculative Masons (Freemasons, for the
most part) wear the much smaller apron that isn't really intended to
offer any protection.

Linen aprons are most often found in U.S. Lodges and are usually
provided by the Lodge. They're used most often for routine Lodge
meetings or events. A Mason's real apron is made of lambskin, which is
a symbol of purity, or of white leather, which is a symbol of the
lambskin. A linen apron could be thought of as a symbol of the
lambskin apron.

I am thinking of getting ride of my Drake R8 which I have had for
about 13 years and buying a JRC NRD-545.
Would you do it? If so why or why not.
Please don't recommend the r75 or the AOR7030+. I have already ruled
them out.

I think that some stores,such as Wal Mart and the like,should let people bring their old fluoresecent light bulbs/lights to the stores and the stores could turn in the old bulbs/lights to a collection agency,all at no charge to the customers.That might keep a lot of mercury out of the landfills/water tables.Sounds like a good idea to me.

Source record: 102492

Dear Sir,

Unless there is something radically wrong with your Drake R8, I see no real reason to "get rid" of it in favor of any other radio, other than just being "tired" of it. (Note that many people "get tired" of their possessions. People like me, who keep equipment for decades, are rare. I still own [and occasionally use] my Lafayette Model HE-10 Communications Receiver/HE-11 Loudspeaker which soon will be 45 years old, though, of course, I routinely use a much more modern table-top receiver; most of my "hi-fi" equipment was purchased in the 1980s and my system still sounds as good to my ears as anything else I have heard, regardless of price.)

I believe that if it was top-quality "then," it is still top-quality "now." (This would not be accurate if new technological advances were incorporated in a newer piece of equipment, but this does not apply to the R8/NRD-545 comparison, DSP processing notwithstanding.)

I do not believe the JRC NRD-545 would satisfy you any more than does the Drake with the exception of the "good feeling" one gets when one buys a new toy.

But that "good feeling" generally passes quickly.

And consider that there is also the possibility of "buyer's remorse" which is actually far more common than generally acknowledged.

If you consider logically, the performance of a properly-working Drake R8 should perform as well as a JRC NRD-545, and probably even better, certainly in the opinion of those who review for PASSPORT TO WORLD BAND RADIO (they gave the R8 in all its incarnations "5 stars" and the NRD-545 "4½ stars") and there are several other considerations.

Should your Drake need service, it is quite easy to ship it to Drake in Ohio. They have a superb repair facility and offer fair prices and very quick turnaround. While Drake no longer manufactures shortwave radios, the company appears to be healthy and should therefore be "with us" for quite some long period of time. Also, if you took the precaution of buying the service and repair manual for your radio, this would make having repairs effected locally practical.

The JRC NRD-545 has been recently discontinued and the company appears to be in some financial difficulty. Plus its main office is located in Japan. This is a situation which should be a cause for concern, or at least major consideration.

My recommendation to you is: if your radio is in need of even minor service, send it to Drake right now. If it does not need any service, then so much the better. Once you have your Drake R8 in first-class shape, investigate and invest in a new, possibly better, antenna, or, if your antenna is already excellent, then add a second antenna. (One can't have too many of them!)

We're in the doldrums of shortwave reception, this being the "bottom" of Sunspot Cycle 23 and reception will not be as good this season as it will be within a couple years from now. Of course, reception in difficult conditions is the entire reason for having a top-notch table-model shortwave radio in the first place, along with a top-notch antenna (and remember that the antenna is ALWAYS much more important than the radio!). With a "top" combination, you'll hear as much as is possible to hear. (My reception this season, with my table-top, has been really excellent, much better than I had anticipated, though please take note of the fact that I live on the US East Coast, an area in which SW signals are stronger than on the West Coast. However, my portables are, relatively speaking, "dead.")

Frankly, regarding your receiver, I really don't think you could do any better. You already own one of the very best. Putting it in first-class shape, if actually necessary, is far less costly than buying a new radio. You could invest the money saved into a new antenna or even a new portable, and you'd still probably have a lot left over!

Obviously, the above is my opinion only.

Best,

Joe

We are having the strangest winter that my 48 years can recall.

I am in Peterborough in somewhat southern Ontario, Canada and the temp hit 12C (55F) today. Our norm should be -3C. There is no snow of course. January is typically our coldest month.

Some are blaming global warming but GW takes years to change the weather.

I heard this week that Mexico had snow.

I am hoping there are people here from other parts of the world that can indicate what kind of winter they are having. Normal or weird?

''''''''''''''

I am about 300 miles north of you in Algoma and for the first time on
record there is no snow and the temperature is 45f. The winter resorts
that usually are busy with skidoos and skis are closed with a loss of
revenue and tourism. Some blame this on the effect of el nino but the
breaking away of the Ellesmere ice shelf shows that something big is
going on. Ice cores show that climate change can come about quickly: a
couple of winters like this and it would be time to move away from the
shore. While Ontario and the east have been having a mild winter, the
west coast and mountains have been clobbered. Perhaps others will have
reports of unusual weather.

Here in S. Korea it's definately been much warmer on average than normal
wintertime temps. We've had a couple of 'fingers' of cold come in, each
lasting only a day or two, then warm again. Today is due to be one of those
'fingers', with the daytime high having been reached at midnight (3C/37F)
and supposed to keep dropping to reach down to -6C by nightfall. The day
before yesterday when I was in Seoul doing some shopping, it was a nice warm
13C/57F and we walked around town in short sleeves. The latter has been more
the way of it this winter so far.

Southern England, 51 deg N, 1 deg W, 2006 was the warmest year on record. Right now, 00.00 hrs GMT, the outside temperature is 45 deg F, last night it did not go below 50. This is silly weather - we have had one frost this winter.

All the evidence points to human activity and the likelihood that it too late to stop some major incidents. For instance, I would not fancy my chances if I were a polar bear or if I lived on an island in the middle of the Pacific.

Charlie.

It started raining here yesterday at about 11:30 AM,the rain came down harder and harder.It finally lightened up at about 11:00 PM.I have never seen it rain so much and so hard and long during a twenty four period here in my life before.There was at least one tornado yesterday that destroyed some homes.Off and on yesterday,I was losing my DirectTV signal because of the weather.If all of that rain had been snow,this area would have been buried in at least four feet of snow,in opinion.

That ancient code as you put it is a language made in heaven.

When Amtor, Pactor, this TOR or that TOR, SSTV and even phone can't make it through, the Lord was kind enough to provide us with cw.

One thing you failed to notice was that the FCC did not do away with CW. No no no ... it can still be used. Wait until contest time you witless twit!

CW blows phone away when conditions are tough. If you want to see skill and savvy at work then build a Captain Decoder kit and "listen" in. Of course that's providing you have such skills.

You think your all that because you took a written test and passed? HA! Dig out a test sheet from before the age of transistors and chips.

You'll fast discover my friend that earlier on in this world people developed skills, real skills, not a fast or cheap introduction with a yellow and black book befittingly described as "For Dummies!"

I can see the day when the station you want to talk to the most can't hear a peep out of you because you don't have the skills or knowledge to do much more than turn equipment on or off.

Yes sir, that's where Amateur Radio it's heading to, a bargain basement of radio licenses because nobody could set the kid straight and teach him a few dits and dahs. Impress me and learn a new trick besides roll over and play dead!

461. Original RL Drake R8 -vice- JRC NRD-545 - Consider "Up-Grading" to the 'newer' RL Drake R8B Receiver !

- I can't say this with any real degree of authority,
- but if this radio follows the trend that most have,
- the analog AM and FM are really afterthoughts,
- and Sangean concentrated on the "HD" part of
- the radio. This in the same way that HiFi stereo
- systems concentrated on the FM tuner and
- pretty much just put whatever would pick up
- your local stations on AM.

Three very interesting podcasts describe and re-create Reginald
Fessenden's first AM transmission in 1900 (modulated output of spark
gap at 10kHz) and first AM broadcast in 1906 (modulated output of CW
alternator at 80kHz) and discuss the significance of his work in the
invention and development of radio. There is also playback of the
earliest known recording of spark gap morse code reception (1910).

You already answered one exception to this blanket statement about
radios calibrated in an absolute scale.

Here is another exception, you can be reasonably sure that the same
model radio will have similar readings.

> Typically, SWL radios would have their S-Meter calibrated at 14MHz,

Man, you are ancient.

No I pretty much meant what the user would experience using the radio. Looking at the radio as a black box and not understanding how all the circuits inside actually operate I described what would happen as the RF gain control is operated with the AGC circuit on.

The perspective here is what to expect from the operation of the RF gain control not unlike what to expect from the S-meter, which is the subject of the thread.

Oh come on. The same model with the same factory adjustment would have
the same reading or very close. It would be reasonable to see a small
variation but a "huge" difference would indicate a problem with one of
the radios.

Look up the Van Oort Cloud.Hold your fingers out,try to get a curve/twist to them.Your fingers represent the Van Oort Cloud.Each finger has more space dust than the space between your fingers.As our solar system/Milky Way Galaxy passes between your fingers there is less space dust than there is in your fingers,hence global warming,because of more light/heat from our Sun.As Earth is passing through your fingers,there is more space dust in your fingers,hence global cooling,because of less light/heat from our Sun.Of course,there are many other factors involved there too.
Hey,Mars Attacks! flick is beginning on Radio tv now.

> So you do care then?

It's a common mistake. people mean to say "I couldn't care less" but
accidentally drop the NOT. You are quite right, though..'I could care
less' implies SOME care at the present time.

For One and All,

Today's News HeadLine via the Voice-of-America-News . . .
VOANEWS => http://www.voanews.com/english/portal.cfm
{ Your World-Wide News Portal To What America Thinks
"IS" News -and- How You Should Think About It. }

Here is the News HeadLine that 'i' have picked for Todays
{ So That Makes It News ! - I mean really Really REALLY News. }
News HeadLine : "New UN Secretary General Appoints Deputy,
and Asks 60 Senior Officials to Resign"
-by- Peter Heinlein - United Nations in New York, NY - 05 January 2007
http://www.voanews.com/english/2007-01-05-voa60.cfm
"U.N. Secretary-General Ban Ki-Moon has named Tanzania's
Foreign Minister Asha-Rose Migiro as his Deputy. Mr. Ban
is also asking 60 Top UN Officials to turn in their Resignations.

REMEMBER - The Voice of America (VOA) :
Is a Trusted Source of American News and
USofA Information. {Propagandizing Since 1942}

Plus - That Something Extra "In-the-News" by the VOA-News :
"Top US Congressional Democrats Urge President GW Bush
Not to Send More Troops to Iraq"
-by- Deborah Tate - On Capitol Hill, Washngton DC - 05 January 2007
http://www.voanews.com/english/2007-01-05-voa50.cfm
In their letter to President Bush, the top Democrat in the House of
Representatives, Speaker Nancy Pelosi, and the top Democrat in the
Senate, Majority Leader Harry Reid, wrote that adding more combat
troops in Iraq would only endanger more Americans and stretch the U.S.
military to the breaking point for no strategic gain.

Legal Reminder - As Americans we are not suppost to be
Listening to the VOA Radio Broadcasts because the VOA
News {Propaganda} might Influence Us. -but- It is OK to
Read the VOA News on the Internet and Listen and Watch
via the Internet. {Hey - It's the way things just happen to be.}

cause as your un-official 'rrs' news american presenter :
'i' am important - cause 'i' make the news news ~ RHF

We've all been hearing about GW and there are changes happening. There is a lot less snow than when I was a kid. It is unusual for us to hit -20C when 25 years ago -30C was common and I didn't know if the car would start or not in the morning. But these changes have been gradual.

The weather this winter, here anyways, has been blamed on "el nino" and the northern position of the jet stream allowing the warmer air from the Gulf of Mexico to visit us.

There has only been a 100+ years of accurate weather data to analyse which isn't enough to really see if this GW warming is a cycle or not.

Remember the talk in the 70's of the next ice age coming?

What this warm weather has done is get the GW people more active and the Canadian Government has this week shifted its priorities to more address the environment.

A poll released yesterday indicates that the Ontario population is more concerned about the environment than our health system which is in a mess.

Ya - warming is happening but this is just weird weather.

Brian

487. Re: Drake R8 vs JRC NRD-545

IMHO you should keep the R8 & buy the NRD-545 used. The money you save on the used 545 will cover the money you would get for your R8 if you sold it.

all the men, women and children.

489. Does the Kaito KA1121 perform the same or even better than KA 1103

Newsgroup: rec.radio.shortwave
Date: 2007-01-06 12:30:34 UTC
From: AussieDrifter <Mark__Rutherford@hotmail.com>
Message-ID: <eno4pfqgq1@news-01.bur.connect.com.au>
Source record: 102538

G'day All,

I've been on the lookout for a nice little portable that performs well for its price and size. To my astonishment while reading through the eHam reviews for portables I came across the Kaito KA1103 (http://www.eham.net/reviews/detail/5071) with the majority of people giving it raving reviews (5/5).

So interested I then started to look around for where I could get one and how much. This is were I encountered advertisement for the KA1121 with the detachable MP3 Recorder / Player.

EHam does not have any reviews about the KA1121, and this newsgroup has only had a few threads mentioning the KA1121.

So my question to the Forum is for those that have KA1121 or can fully understand and can compare the two radios specification (i.e. Sensitivity etc) tell me if the KA1121 is as good a performer as the KA1103 ?

Cheers
Mark

Thanks Mate,

Thats the link I was after :) I saw it yesterday and I tried using Thunderbird's search to search the threads but I must have entered a dud search criteria.

I can see from Art Simon's conclusion that the Degen 1103 / KA1103 is a better choice.

Hopefully I'll get a couple more responses and take it from there :)

Regards
Mark

And just think when in the 1970's we experienced one of the coldest series of winters on record. The propaganda of the Neo-Kommies at the time was a new ice-age cometh - BWAHAHAHA!!!

> which isn't enough to really see if this GW warming is a cycle or not.

Don't bother trying to explain science and statistics to Neo-Kommies. They
are brainwashed and can not comprehend anything but "It's President Bush's
fault".

> Remember the talk in the 70's of the next ice age coming?

Imagine how warm it would be today if we did something about it.

> What this warm weather has done is get the GW people more active

You mean is has the anti-capitalist Neo-Kommies more active.

> and
> the Canadian Government has this week shifted its priorities to more
> address the environment.

Oh pahleeeeeeze.

> A poll released yesterday indicates that the Ontario population is more

Source record: 102550

I have a very nice, clean Kenwood TS-940SAT from an estate. It has been stored for almost 10 years,
but works great. I have tested it over the past month with no problems. It looks almost new. All dial
lights and displays work as they should, no problems in this area. The SN is 7080XXX.
This TS-940SAT is loaded with filters: YK-88A-1 AM Filter; YK-88C-1 500 Hz CW Filter; YG-455C-1
CW Crystal Filter for the 455IF. It also has the VS-1 Voice Board installed as well as the Automatic
Antenna Tuner. I am asking $990 plus shipping for it. If you don't need the optional filters and voice
board, I will pull them out and sell the transceiver for $690, but I would prefer to sell it as a package. Thanks, Charlie Hugg, K5MBX

It's pretty scary when you can hear the intermittent arcing in some
of them. Where's the fire department going to have to go, now?

One question, (not really worth spending much time on): Do the strings
of lights just act as an antenna and make a more efficient radiator
of dimmer noise from the inside of the house, or is there some active
circuitry (timers or controllers) that create a new source of noise?

I have for sale a Mint Kenwood SP-940 Speaker. This speaker has the High
1and 2 and Low filters.
It the A/B switch so it can be switched between 2 radios. It comes with the
original connecting cable.
There is not a mark on it and it sounds great. Price is $125 shipping in
CONUS. Thanks, Charlie
Hugg, K5MBX

I have a very nice Kenwood SM-220 Monitor Scope with the BS-8 Pan Adaptor Option installed.
The scope works very well and is in great condition cosmatically. It has few small scratches and marks around the outer trim of the front panel, but the front panel and cabinet are near perfect. It is from an estate and has been stored for almost 10 years. I checked it out for the past month and it functions as it should. Price is $375 shipped in CONUS. I can send digital pictures upon request. Thanks, Charlie Hugg, K5MBX

Obviously, your and my idea of "tolerances" isn't what theirs is. A whole lot of radios are aligned "just good enough", or they need touching up due to aging after a really short time. Some just are not right at all out of the box, and a slight adjustment works wonders. I've seen huge differences between Icom R-71A's. Some, like the last one I had were dead on freq, the PBT was aligned right, etc, but some I had previously owned, and worked on weren't even close. Some of these were brand new, and I was helping the owner install a filter or something. when compared to a good one, it was obvious something was wrong.

Electronic Equipment Bank (EEB) sold a lot of alignments on brand new radios, as the factories weren't doing a real good job of it. They would turn on your brand new R71A, R5000, Yaesu FRG-8800, and let it cook for a couple days, then align it.

Then there is the thing all the major brands of ham and SW equipment have in common, the lack of ability to tighten screws. Most were just snugged, and by the time the thing had ridden across the country in a UPS or Fedex truck, gone through a few heat/cool cycles in the process, they weren't even close to being tight anymore. Even after an EEB alignment, the S-Meter's could still be off a little from one to the next.

Then you have techs who forget to tighten screws in your $1000 receiver before they ship it, and not only does the alignment get messed up, but you are overjoyed that something wasn't broken. Yes, it happened to me about 15 years ago. I sent my NRD-515 in for a minor problem, more an annoyance than anything else. When it came back, it rattled, and two screws holding the top PC board had fallen out, and the rest were so loose they were about to fall out. I ended up checking around and finding a good freq counter and realigned it myself. Close, but not 100%

right, I need to do it again. I also fixed the original problem that they "couldn't duplicate". Odd, since it did it as soon as I turned it on after I put the screws back in and tightened it all up.

The only real way to compare (without any equipment) two radios is to hook them up to a coax switch and then to the same antenna, and switch them back and forth to compare.

My first NRD-525 was fantastic at hearing itself with great dynamic range, on 13 MHZ, I think it was. I did a mod that allowed me to turn off the display to solve it. The one I have now is maybe 10% as bad as the first one, and unless it's the middle of winter, with snow on the ground, it's not really noticeable. One more reason to love those red LEDS in the 515.

But fundamental to all this talk about s-meters is that they never were intended to be anything but a relative indicator. And once you have that situation, there is little reason for the manufacturers to fuss over them.

They are great to indicate at a glance that one station is stronger than the other, and if you need to peak or null something they provide a better indicator than your ears, and as I once saw suggested, they are a great way to get a rough idea of whether your receiver is working fine or not (just turn on the crystal calibrator when you first get the receiver, and then record the s-meter readings on various bands. If those start changing dramatically, then something is wrong, though it's no indication of what might be weakening.).

Over the years, there's been lots of discussion of "how much is an s-unit" and while some have tried to impose a value on it, there really isn't anything to it.

Before there were actual meters attached to receivers, there were the magic eye tubes, which had no scale at all. "You're about half open on the magic eye tube..."

Want to give someone a better s-reading? Put up a bigger antenna, or add a preamp ahead of the receiver. It will raise the meter reading, but the signal as it arrives at your antenna hasn't changed one bit.

Before there were meters on receivers, there was the "RST" system for rating signals. Readability/Signal Strength/Tone that you'd transmit to the other guy to give an indication of

how his signal sounded at your receiver. It was all subjective,
but nevertheless likely helpful to some extent in the early days of
radio. Even today, some amateur radio contests require the exchange
of RST, though it's my impression that in those cases they
just send "59" or "599" (for code, the "T" relates to the tone of
the signal and doesn't apply to voice) to comply with the rules
and don't bother to actually send something that reflects the
state of the signal at their receiver.

From the 1961 ARRL Handbook, this is the how you are
supposed to interpret the Signal Strength code:
1 faint signal, barely perceptible
2 very weak signal
3 weak signal
4 fair signal
5 fairly good signal
6 good signal
7 moderately strong signal
8 strong signal
9 extremely strong signal

I can no longer remember if I read it outright years ago, or made an
assumption, but somewhere I got the impression that S-meters are
named after the RST system.

Given that, any attempt at defining an s-unit is retroactive, trying
to impose some absolute on something that has always been relative.

One of the silliest things I ever saw was a digital s-meter to attach
to CB sets. It was a 2-digit digital voltmeter, and you'd attach it
to the AGC line of your CB set (all s-meters are just voltmeters measuring
the voltage on the AGC line), and get flashy numbers. I can't recall
if it did anything to actual give the basic idea of s-units, or just
was a linear voltmeter. I'm sure it did sell well, because it was
the sort of gadgetry that would sell at the time, and the whole
concept of s-meters is so muddled that I'm sure the less technically
inclined would buy into the notion of digital s-meters.

That's it! When I was doing a lot of UTES, and only had one receiver, it
was horrible. It's nice to just sit on a freq on one receiver, and tune
around on the other(s), looking for new stuff. I used to do RTTY, and
even a third one was in use constantly.

As far as the R8 Vs 545 debate goes, I personally do not like the R8
series, period. Horrible ergonomics compared to the NRD's, terrible
looking display (My opinion), and a case that screams CHEAP! I would
love to have an R7A, but I've passed on a lot of R8X's.

I've had a Yaesu FRG 7000, 7700, and 8800.
Kenwood R1000 and R5000, and a TS-450S.
Icom R71A (several) and IC-735.
JRC NRD 515, 525's, and a JST 135.
A couple of old Hammarlunds and Hallicrafters
A Realistic DX 160, and a DX-302.
All but the 8800 were used.

Never actually owned a Drake, but played with several here. Good audio,
and a decent receiver, but like the AOR7000, it's in a bad package.

Kevin Alfred Strom: A rather boring NAZI who could speak for hours on 75m in praise of the KKK. He is a coward who lives in perpetual fear of the Southern Poverty Law Center and knows (or thought he knew) which lines he cannot cross to release their ire. But somebody found a skeleton in his closet.

...turns out he likes little girls.

Looks like something else, in addition to white sheets and tin foil hats turns him on. Have a good prison term, Kev.

Unfortunately that didn't solve the problem.

Any other ideas? I want to be able to automate recording some
frequencies over night, but I cant right now, as I have to keep the
laptop plugged in, which is causing significant static / interference.

Jan. 4, 2007 - A leader of the white supremacist movement was arraigned today on charges of possession of child pornography and witness tampering after being arrested by FBI agents Thursday night at his home in Charlottesville, Va.

Kevin Alfred Strom, founder of the National Vanguard white supremacist group, was considered the leading intellectual of the movement since the death of William Pierce, the author of the notorious "Turner Diaires."

Strom was arraigned in U.S. District Court in Charlottesville, charged with the two counts, and is currently being held at a facility in the city. According to the indictment, he allegedly possessed or attempted to possess "multiple images of child pornography" on his computer's hard drive. Strom was also charged with witness tampering, which involved physically assaulting and mentally intimidating a witness to his criminal activity.

Last July, Strom took a leave of absence from National Vanguard, citing "family and health matters" and saying that he had "made mistakes, sometimes serious ones," according to the Southern Poverty Law Center, which tracks white supremacist activity. "After the death of Pierce, Kevin positioned himself to take over the leadership of the National Alliance," says Mark Potok, the editor of the SPLC's "Intelligence Report." "But he wasn't in the same position as Pierce and he didn't get the same respect. He was a wannabe and he was considered something of a wimp by other supremacists."

Strom wrote frequently about art and beauty, often rhapsodizing about the physical attributes of white women and girls. In an 2003 essay titled "Millstone for the Mogul" for the National Alliance's Web site, he condemned the producers of the movie "Thirteen" for "what they are doing to our little children - teen and preteen White children - to normalize perverse and degenerate sexual behavior for them, to normalize homosexuality, to prematurely sexualize them, and to make interracial sex fashionable to them - can never be forgiven, can never be explained away. The media moguls who are doing this to our children deserve to be tried and punished for conspiracy, rape, gang rape, murder and attempted murder."

Yes, that would make it an I.F. gain control, and that is what it is most of the time. I don't know why manufacturers still use the misnomer "RF Gain" for this control.
Concerning the ARRL, when they talk about having only enough gain to hear the normal background noise they are usually talking about RF amplification ahead of the 1st mixer. It is important to pay careful attention to the gain distribution of the receiver, since any gain ahead of the 1st mixer degrades the dynamic range by that same amount.
As an example, suppose a receiver has an IP3 of +30dBm. Now, if a preamplifier with 10dB of gain is placed ahead of the 1st mixer the IP3 will be degraded to +20dBm.
Typically, excess noise contributed by the environment is in the 15 to 20dB range. Many shortwave receivers have a noise figure in the 10 to 12dB range. The excess environmental noise can be between 3 to 5dB above any noise contribution that the receiver has itself. For this reason, most modern receivers don't use an RF amplifier ahead of the 1st mixer.
Some receivers, such as the AOR-7030 have a post-mixer amplifier. Any amplification after the 1st mixer won't degrade out of band IMD performance unless signals fall within the range of the roofing filter that follows the 1st mixer.
Now, another point comes into consideration.....close-in IP3 performance. Three major mechanisms affect this parameter. First of all, the performance of the 2nd mixer itself. Most receivers use a "weaker" 2nd mixer since the roofing filter protects this device from out of band signals. If a stronger 2nd mixer with better IMD performance is used, the close-in IMD will improve.
The 2nd parameter is the sideband noise of the synthesizer itself. If phase noise can be improved, close-in IMD performance will improve.
Of course, the parameters of the roofing filter itself will directly affect the close-in IMD performance. As an example, both the Racal 6790 and the JRC NRD-515 are using at least an 8-pole crystal filter as the roofing filter at the 1st I.F.
The 6790 has some amplification that follows the roofing filter, and another roofing filter is added after that amplification.
The result is exceptional skirt selectivity at the 1st I.F. This affords quite a bit of out of band protection for the 2nd mixer.
Another example is the Collins 651S-1. This is a triple conversion receiver. At the 1st I.F. of 110.35MHz, an 8-pole crystal filter is used. At the 2nd I.F. of 10.35MHz?, another 8-pole crystal filter is used. At the 3rd I.F. of either 450 or 455kHz, depending on when the receiver was manufactured, mechanical filters are used. These things are what set the "premium grade" receivers apart from most of the consumer equipment.
Do we really need this kind of front end protection? Probably not, unless the receiver is going to be used on an ocean going vessel that has

multi-kilowatt transmitters. Even in this scene, narrow band RF preselectors are used ahead of the receivers to add additional IMD protection. I hope this helps.

That still doesn't make sense. As you advance the setting on the RF gain control, the S-Meter reading will increase, unless you are talking about some of the older tubed units that used a negative AGC and had the S-Meter at full-scale when the receiver was powered down. Now, about being ancient.....

Pete

> them out.

I had of both of them in the past. Wow, that's a tough decision, but in my opinion when you weigh the pluses and minuses, the NRD-545 beats the R8. The R8 has better audio (better bass and a more powerful audio amp), and perhaps a slightly better synch detector. The 545 is an ergonomic dream, much easier to use than the R8's somewhat clunky "menu". The 545 is also built much better than the R8, and will probably last much longer. JRC radios are famous for their construction and reliability. The R8's selectivity can be a bit better in some situations when you're trying to dig out a weak signal extremely close to a strong signal, but in most situations the 545's selectivity is very good. The 545 is more sensitive on LW than the R8, if that matters to you. If you get a 545, be aware that the DSP parameters have to be set correctly for the DSP to work well. For some reason they're not set optimally out of the box.

All I can tell you is I replaced my R8B with a 545, and was never sorry. The 545 is an excellent radio. But now I have a Ten-Tec RX340, which is the best radio I ever had.

Now that is just darn handy, finding some porn on his computer, isn't it? Makes one wonder in such high profile cases ...

And no, I don't think those women and children in Waco Texas deserved to die ... I do think clinton and reno should have spent prison terms for playing such a major role in their deaths--if for no other reason than just plain negligence, that seems obvious enough to me.

Mike Chambers wrote:
> Unfortunately that didn't solve the problem.

The transformer should have fixed the problem. The noise is most likely coming from the laptop switched-mode power supply. Have you tested it while running on batteries alone?

I have several radios connected to computers, and for this I use the Buxcomm Rascal GLX (www.buxcomm.com) and this works for both of my pc's and my laptop.
The Rascal is also available as a kit for transceivers and you can build just the receive side if you wish. That said, the transformer alone should be enough, and there is the possibility that you did not assemble the cable shielding correctly or add sufficient bypassing.

My computers receive audio, decode it and post it to my webpage. This system does work, do not despair.

< Snip >

If the signal has not gone through a demodulation stage it it still a
modulated carrier so even if it is a mixed IF product it is all a part
of the RF gain stage in the radio.

I agree with you that it would be better to call it a IF gain control.

< Snip >

Most of the better modern receivers have a switchable RF amplifier
because the background noise is higher at lower frequencies and as you
noted can reduce the intermodulation performance so with adjustable or
switchable RF gain you can use it at higher frequencies or actually at
any frequency as conditions permit.

< Snip >

Every stage in the radio that the signal has to pass through will add
its own set of intermodulation products. RF amplifiers, RF attenuators,
all and any mixers, IF amplifiers, filters, and demodulators.

Sure there are many reasons a radio may not perform to specifications.

Specifications can only get you so far. You do have to actually operate
the radio to find out if its total performance is in line with your
expectations.

Most likely the switching noise from the laptop passes through the
connecting cable as common mode noise. Try RF chokes on the cable on
both ends.

That Freq.txt is a double edged sword. While it may be despised by techniphobes, it has alot of potential.

A) Someone can write a pretty easy [the devil may be in the details] program to grab the frequencies of the stations they enjoy listening to and automatically create memories from quarterly text based schedules available online.

B) As you just did, people can share freq.txt files so that other people can 'program' their radio, without even tracking down frequencies.

And you know the best part about it????

Kevin is broke. His bulldyke wife is broke. He was tossed out of the
National Alliance. He formed the "National Vanguard" -- which is
broke. His friends, such as they are, are all broke losers.

This is a federal charge, he's in a local lockup in Charlottesville, VA
-- that's likely overcrowded and filled with the same people Kevin
likes to hate. His bail is likely to be $100,000 or more.

No one can go his bail -- so -- he'll sit in jail until his trial,
which could be months unless he works out a plea agreement.

Oh, wait a minute -- you think he'll be able to sit?????????????

BWWWAAAAHAHAHAHAHAHAHAHAHAHAHAHAAAAAAAA!!!!!!

John Smith I wrote:
> Just how young were the girls you were dating when you were 32???
> <shocked look>

Strangely enough, when I was 32, a little girl pulled herself up on the barstool next to me and asked me to buy her a drink. I offered her my opinion that she was not old enough to drink. She said, "I am too old enough to drink - I'm 16." This was New Orleans 36 years ago when the legal drinking age was 16 and the age of consent in Louisiana was 12. It was perfectly legal so don't pretend to be so shocked. :-)

Later, a Louisiana female politician introduced a bill to raise the age of consent to 18. One of the male politicians tried to attach an amendment to make consent mandatory at age 18. That's a true story.

The state of Louisiana didn't object when Jerry Lee Lewis married his 13 year old second cousin in the late 1950's. It was the British who objected.

I've always thought of the DE1121 as a DE1102 with MP3 player/recorder, not 1103 competition. (Degen tends to use oldschool non-SMD components on the main receiver board, so if you throw in the MP3 thingway at about the same overall size as the '1103, space will invariable be more limited.) Has anyone compared it to the trusty DE1102 yet? The user-editable freq.txt is cool though; I think that was one of the features suggested for the DE1108 here.

I understand what you are saying, but an I.F. gain control is operating the gain range of that stage. True, the Intermediate Frequency is still considered RF, technically. The only difference I am stating is that this type of control isn't controlling the gain of any RF amplifier that might be ahead of the 1st mixer. I remember a couple of receivers in the old days that actually had separate RF gain and I.F. gain controls.

Very true. My Drake R7 has one of those switchable RF amplifiers. The problem is, now that I have replaced the 1st and 2nd mixers in my unit with lower loss devices, the receiver has a better noise figure than its switchable RF amplifier!

That is also true, but I am talking about RF IMD products related to the signals that actually enter the 1st mixer. Even so, front end filter switching diodes can cause IMD problems, unless you use PIN diodes that are biased with at least 50mA of current.
RF amplifiers, if properly designed can have an IP3 in the +40 to +50dBm range, so this will have a smaller impact than the mixer and synthesizer will.
I was testing some Mini-Circuits step attenuators on my last stint with Motorola. I measured the IP3 of these devices at +53dBm. This wouldn't affect the IMD performance in a large way, but as they say, "every little bit counts".
Taking it a bit further, even RF connectors can cause IMD products. This becomes an issue when making very large dynamic range measurements.
As always, it's been good bantering with you!

No, things are NOT as they should be. CW never was and never will be an "older generation" issue. There was a purpose and reason for knowing cw and being required to pass a cw test to hold a license.

Unfortunately, the F.C.C. lost sight of that issue and grew weary of ham want-to-be's screaming Gimmie! Gimmie! This new ruling is just another example of how higher authority gets tired of the whining and crying and gives in. Bad move.

I stand on what I said earlier. Some people think getting a license should be as easy as ordering a Big Mac. I suppose we should do the same thing for drivers and pilots licensing too. Makes me feel real secure. NOT!

Perhaps you never came across an instructor or training package suited to your level of learning. That doesn't mean it's difficult to learn or your incapable.

I was a VE and I have taught people between 7 and 80, literally. I have taught cw to people with disabilities who rather than opt for a waiver that would have made licensing easier for them, kept at it until they passed.

There is more than one way to pass a cw test. Only once had I witnessed someone who after 5 attempts was allowed to take the test by other than conventional means. When he was told he passed he almost fell out of his chair.

New hams today just want it easier. You didn't win anything because the F.C.C. lifted the requirment, you lost the ability to be apart of something that could have expanded your horizons. Don't you feel better now that you impossed a self limitation on yourself?

if there was a reason other than just hazing it seem the advocates of
Morse Code testing have never managed to articulate it well enough to
be understood even by other hams hams like myself let alone the FCC.

I have alwasy been willing to conceed their might be a good reason ofr
mandating code testing but that it was alunknown to me and unknown to
those pushing it.

Code testing is and older issue since code becomes less relvant and
less usefull in the real world daily as it users craok faster than new
ones are created, less ham able to use it the mode become less usefull
this process of attrition WILL continue . It will speed up some with
the end of code testing till some level reached much like AM

The OP already tried a isolation transformer so I don't think an
opto-isolator will be any more helpful.

I expect that it is a common mode noise issue. He can buy common mode
chokes that just clamp on the cables to find out.

Surely you jest, with optical isolation, there is NO direct connection ...

Unless you are proposing the rf is able to transverse the light beam.

The news articles are very vague about what the feds supposedly found (or planted) on his PC. Does anyone have links to more detailed news articles about this?

Sure, this could be a set up by the Jews, but then again maybe he's guilty. We'll probably never know the real truth. I would tend to trust Strom (or any pro-White person) over any of these lying Jew outfits like the SPLC or ADL, but I don't know all the facts in this case, and am withholding judgement.

The optoisolators are only used for ptt keying, not for the audio. The audio is usually isolated with transformers. But, just because the op has tried transformers, doesn't necessarily mean he did it correctly.

Brad.

Is your laptop battery weak where it is always charging? This would
overheat the supply and generate more rfi.

We had a Dell with this problem at work. We used to plug the power
supply into a 110 volt isolation transformer and then we connected a
ground lead to the ground side of the speaker jack on the computer.

Another alternative is to replace the laptop power supply with another
brand which hopefully will not be as noisy.

Such that switching in the amplifier would actually degrade S/N? I've noticed something similar with the AR7030's amp when using the AN-LP1, preamp off seems better. A particularly bad case is the Redsun RP2000/2100 RF preamp, it seems - activate the attenuator (which is after the RF preamp) even with no antenna connected at all and minimum RF gain (yes, real RF gain), and background noise drops bigtime. Looks like a mod would be in order here... (That set also is an example of creative LA1260 use. I fail to see how they get the IF signal to the IF input, or what the point is in doing it that way. [1])

I mean the impedance inverter switched on when using the WHIP position
of the input switch. Can't actually remember if the +10 dB preamp is
turned on.

> Too much Prussian Blue?

VERY CURIOUS that you mention Prussian Blue!
In fact, there was a posting on another web board
by someone called gaede. While it's validity is as of
yet un-confirmed, it does offer a curious peek into the
domestic lives of these white supremacist sloopheads
inside of the trailer parks where they usually reside.

In short, it reads like a script from the Jerry Springer show....
(enjoy!)

--- cut ---

from: http://vnnforum.com/showpost.php?p=480505&postcount=15

"In October of 05 we were driving to Arizona for the NV Eurofest and
Elisha called me on our cell phone. She was screaming hysterically and
wanted me to relay a message to Kevin that "the phone had been shut
off" and that " he didnt pay the damn phone bill". She also stated that
she "wouldnt be here when he gets back, he always goes on these trips
without me etc..." when we got to Phoenix we told Kevin and later he
explained that the phone was not shut off,it just was not connected
properly and so the connection was on and off and that he could explain
to her how to fix it if she would call him.

A few months later when the Colorado and Florida guys were complaining
about Kevin's lack of ability to get things out on time I mentioned to
a fellow member that "maybe Kevin and Elisha are having marital
troubles and that is effecting his work". I had long suspected that she
had been deleting my messages from their answering machine and from his
email and my articles from the National Vanguard submission account.
Kevin confirmed months later that she had access to all of this and
that might have been where the articles or messages that I sent ended
up. Anyway, this fellow member told another fellow member who in a
"genious" move posted that info on the internet like it was fact.
Elisha hit the ceiling. I called to appologize but she wouldn't hear of
it. I tried to appologize again in May at the NJ conference but she
said " April, get away from me, I dont want to cause a scene here
today". After all the scandelous lies that have been written about me,
I thought she was overreacting, especially since my appology was
sincere and since it was only stated out of concern for them and for
our organization.

Then in March of last year Kevin called me and told me that Elisha had attacked him and slammed one of those big heavy old fashioned phones down on his head and he had to get 8 stitches. Also, he told me that she had destroyed several one of a kind Reviolo Oliver taped interviews in a fit of rage because they had his ex wife on them. He also then told me that she had found some porn on his computer and that is was of adult females but that she freaked out and called him a pervert. (as a wife I kindof can understand her being pissed) Then he told me that she had threatened to "get even" with him and that he was afraid that she would plant something on his computer since she had been openly calling him a "pervert, child molester" in front of their daughter (Elisha's biological daughter but Kevin's stepdaughter) At this point I told him that he should have reported her to the police for assaulting him and should tape the threats that she was making. He said that he wanted to " save our marriage" ....and that he had "caused her alot of pain when she saw that porn" and that he wanted to help her and that she was having some psychological self esteem problems at the time.

Now as a mother I have to ask. If this was true about Kevin and what she suspected, then why would she have continued to stay in the house with her daughter? And why was she hanging all over him at the NJ conference?? Also, why would he mention this to me in March then continue to have stuff on his computer???

The bad thing about these kinds of things is that even if a guy is innocent and is declared innocent in a court of law his reputation of forever ruined.

The clandestine, Denge Mezopotamia(p) 7590 heard here at 1500 s/on, scheduled in Kurdish to the middle east via Moldova. Transmission scheduled from 15-17.

Very weak.

At 1700, the clandestine, Denge Rojhelat, is scheduled on the same frequency with Farsi via Samara, Russia.

I had to check this one out. Barely audible here in NJ. At times, only
tuning off to check for the het shows that there is somthing going on here.

This could be true. I think At Bell is 60. How old is the new wife?
Is she really 20?

I'm not rich or 60 yet, but I'm wondering if this could be a good idea
for me. Where do I get me one of them Filipina brides?

TIA
I am looking for a table sized clock radio with an earphone jack. I have spent many hours researching with my limited knowledge, for the right radio and just realised there was your newsgroup. I know newsgroup people are passionate about their stuff:). I would be willing to trade your knowledge for anything you ever wanted to know about Kona Coffee:) or farming in Hawaii etc.

This is what I want and I need your help because I am a farmer and not a radio guru. I want a radio cappable of getting an FM station from 93 miles away (the closest NPR station I have) and I live in a remote rural area with mountains and valleys. I have looked at Sangean, Eton, Tivoli, Boston etc. but I can not make my decision. I am willing to spend up to $200.

Can you make me any recommendations? I honestly don't know if I need a short wave even. Sorry.

Again thanking you in advance for any information you can give me or for a direction you can steer me in.

aloha,

The most sensitive FM and MW portable radio under $200 currently on the
market is the Redsun RP2100/Kaito 2100. It's great on SW too.
Having recommended that I hasten to say that FM radio is line of sight and
that it is unlikely that ANY radio will pick up an FM station 93 miles away
over mountains.
MW over that distance should be great though, as of course would be SW, the
signals of which travel over vast distances.
I live in a valley shielded by high mountains and can get reasonable
reception of FM stations 60 miles away over the mountains, but I would think
that is just about the limit.

forgot to mention that you can get the Redsun RP2100 on eBay from two
sellers, recommended one is tqchina.
The Kaito2100 should be available from:
http://www.universal-radio.com/catalog/portable/2100.html

Also, I regularly pick up Honolulu on SW and that's a distance of 11,000
miles.

For simultaneous mode you need a distributer or splitter.
For a cheaply solution use an antenna switch to change between this three.

April Gaede is the girls' mother. She allowed her daughters to pose
for a magazine intended for adult men like this:

http://resistance.com/catalog/popup_image.php?pID=1186&osCsid=40a44c75b1f8053179d2341c965293fa

Resistance is published by the National Alliance, where Strom was
second-in-command under Pierce for a long time. I believe it's no
wonder that he's facing the particular charges he is right now.
Especially considering what he had on his website in the past (photos of
young girls, about 12, in bikinis, and in suggestive poses).

It's a very good receiver. Even strong SSB-signals sounds very good.

I often listen vhf-air comm. In that area of the freq. spectrum the
audio is terribly weak.

I like it a lot.
Two things to be aware of.
Don't lose the manual. Lots of things are non-intuitive.
It draws current even when 'off'. Batteries will be dead when you come
back to it after a few weeks of inactivity.

In response to the news that a U.S. Citizen has been charged with a crime, some respondents have published lurid posts which assume that all of the following are true:

1. Vigilante justice is OK when carried out against neo-nazis.
2. Men named "Ahmed", "Tyrone", or "Leroy" are disposed to commit homosexual rape.
3. Homosexual rape is a just and acceptable side-affect of being arrested.

It seems to me that Mr. Strom isn't the only one who has shown prejudice: the question of whether his overt racism is more dangerous than some others' preconceived notions is left as an exercise for the reader.

How soon we forget. Here's a quote from a late 19th century
symposium on the age of consent for the various states in
the USA. Strom seems to have been born a century too late.

"The age of consent varies from ten years to eighteen, being the latter
only in Kansas and Wyoming. The limit is *ten years in three States*,
twelve years in four, thirteen years in three, fourteen years in
nineteen, fifteen years in one, sixteen years in twelve, seventeen
years in one, and eighteen years in two."

I can hear NPR from my junk bedside radio (emerson) that I have now
but I can't dial it in perfectly.

So I just thought if I could get a great radio with all the elements I
want, it would be better.

I do have a Sangean in another place and it seems to work fairly well
although it sometimes fades on the Honolulu FM stations.

Besides, a shortwave sounds like lots of fun.

664. Anyone have a Boston Accoustic Receptor Radio?

Newsgroup: rec.radio.shortwave
Date: 2007-01-07 21:24:55 UTC
From: NOSPAM <Nospam@Nospam.net>
Message-ID: <12q2p9846n2ila2@corp.supernews.com>
Source record: 102712

Howdy all,

I've email Boston Accoustics with these questions twice, but have yet to get a response, so I thought I'd go to the experts...

I was hoping someone could help me out. I have one of their Receptor HD digital radios.

I know how to get into the "hidden" service menu on it to adjust the tone / bass as well as the brightness and such, but it doesn't save these settings once I turn the radio off and then back on.

For example, I turn the bass control all the way down from 15 to 0 before I set the sleep time at night for 60 minutes all is good. But when the radio turns itself off until my wake to music alarm in the morning the bass has gone back to its default setting. Any suggestion on how to save these from one session to the next.

Does anyone have a users guide / faq / website link to the service menus? It seems to have a lot of neat options (like turning SPLIT ON and OFF as well as BASS BOOST ON and OFF ect... but I have no clue what they do. I've googled it a variety of way, but haven't seen any discussions about it other than links to the BA website where you can download the standard basic manual that came with the radio.

Lastly, and this is going to sound crazy, but when I have the radio on the bedside table at night, a Vol Setting of 1 is too loud and Vol setting of 0 is completely off. Anyway to adjust the volume range or steps between the numbers and defaults similar to be being able to adjust the brightness?

Unfortunely, when the radio is only a few feet away from your head Even VOL 1 is loud enough to keep the wife awake.

Thanks for any advice!

I had a brand new VR-5000 receiver for a short while. I returned it
because it did not seem to do very well in the aircraft (just above
the FM band) and SW frequencies. It seemed to do fine in the upper
VHF areas, but a trunking scanner seemed more useable for me
in that frequency range. I really liked the idea of a really
wide frequency coverage in one receiver such as the VR-5000,
but in practice, it left a lot to be desired. Reviews I
read of that receiver seemed to agree with my assessment.

Is the VR-500 different in that respect? If so, I would
seriously consider getting one of those instead.

Thanks,

Tony B

GE SuperRadio III or if you can find a used one SR or SRII (both better).

http://www.universal-radio.com/catalog/spcialty/0547.html

No shortwave, but very sensitive and good sound.

Geoff.

Hi Beans:
The Redsun RP2100 is the version made and sold within China.
Universal-Radio (As well as Kaito USA) will be selling a Kaito KA2100,
which is basically a North American, rebranded version of the same
radio.

Another point about this radio is that a newer version, called the
Redsun RP3000, is expected soon (within calendar year 2007 I guess).
It will include a numeric keypad for direct frequency entry, SSB
(single sideband-- useful for hearing ham radio communications, utility
stations, and clandestine broadcasts), and possibly synchronous
detection (a feature for AM/SW radio that can reduce fading and
interference). Radiointel.com is a website that is tracking the
progress of the RP3000.

I have purchased multiple items from both liypn and tquchina on eBay
and all of the transactions have been perfect. I would say the only
differences between them is which radios they have listed/available,
and that tquchina seems more friendly/chatty to me.

Good luck with your purchase!

Source record: 102721

The main reason why cw lasted as long as it has was because of an International Agreement. Basically it stated no person could be licensed by their country unless as part of their testing, proficiency of cw could be demonstrated.

Unfortunately other countries broke this agreement. The United States after many years of upholding cw tossed in the towel.

The purpose of proficiency testing was to insure you can send and receive code with a minimum of effort. Consequent to receiving your license, you also took a commitment and seriously I might add, to assist and render aid should you hear a distress call.

In spite of the numerous advances made in the communications field, one thing that has been proven time and again, is that cw is easier to decode under trying band conditions. Developing the ability to hear a distress call and rendering aid takes very little effort.

My concern is that someday a call will be transmitted for help using cw and while the signal could be ideal for decoding. The person hearing it will have no idea what he/she is listening to. The result of overlooking the call could be devastating. That will be a tragic day.

What bothers me equally as bad, is how people want things to be easier. I'm tired of the whining. I hear. It's to hard, it's to difficult . . . baloney!

Try holding a verbal (not cw) conversation with someone at only 5 words a minute. After 5 minutes you'll go crazy and want to speed things up. It's a natural process. Try it.

What gets me is that some people want to talk cw at 20 wpm or faster right out of the box. If they can't do that, they don't want to deal with cw at all.

Let's cheapen cw a bit more. Using a tnc is easier than learning code but it does not make you any smarter and provide you with anymore ability to operate cw when the tnc is not available.

Commitment, honor and tradition.

Thank God you can't buy a license or commitment goes right out the window. The sad fact is that I think we're getting close to it.

In the past it was an honor to become part of an elite group of communicators and to serve a community when the need arose.

CW became the traditional banner you displayed and cherished. The faster you copied code the greater your bragging rights.

Not anymore. Amature Radio is seriously getting as cheapened as a 99 cent happy meal at McDonalds.

I have been apart of Amature Radio since 1962 and if you think the code was tough when it was abolished, you should have seen the requirements back then. I could be wrong but 30wpm for an Extra class is ringing a bell.

I saw this trend with c.b.. Our ham bands are going down the same drain I'm sorry to report. Get to relaxed about something and you loose it for good. Look at the 220 band, half of it gone. 11 meters (yes c.b. use to be apart of amature radio) is gone entirely. Now the code.

Has the FCC specified if a non-code tested station can operate cw with a tnc in the specified freqs? I wouldn't be a bit surprised if the FCC took those portions away from us so they can sell the frequencies like on 220.

Bill Cosby in one of his many speeches said "hold yourself to a higher standard." While he was refering to something else, the comment stuck with me as it can be applied to many circumstances. If your going to get an Amateur Radio license, then get one being the best operator you can be. Don't cheapen yourself by trying less and accepting something second to number one.

Was learning cw boring for me, yes. But so was learning my abc's and 1+1 equals 2 stuff.

I have the Redsun 2100 and it is a nice radio and sounds great..I have ordered several radios from liypn with excellent results. FM over the mountains as said previously may be an issue. I would wait for the new version. Depending on your location to the FM station, the mountains may not be an issue.

PS. I have ordered coffee from you many times and it is great.

Any relationship between the German National Socialist Party and the U.S. Democrats is purely in your drug-addled brain. Your comment is further proof that you rightwingers have gone completely batshit.

686. Using One (1) Antenna with Three (3) Radios - Two Choices : RF Splitter -or- RF Distribution Amplifier

Newsgroup: rec.radio.shortwave
Date: 2007-01-08 00:30:50 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1168216250.587911.188090@51g2000cwl.googlegroups.com>
Source record: 102733

Mundo,

Using One (1) Antenna with Three (3) Radios
Two Choices : RF Splitter -or- RF Distribution Amplifier
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11918

-IF- You are only interested in Shortwave above 5 MHz -and- Are willing

to use RG6 75 Ohm Coax Cable with you can use a common and low
cost TV Splitter or TV Distribution Amp and they will work OK.

Examples :

* TV Coaxial Cable - Splitter - 3-Way
http://cgi.ebay.com/_W0QQitemZ110075807961

* 3 Way Cable TV RF Coaxial Connector Splitter
http://cgi.ebay.com/r_W0QQitemZ200064785856

* Monster Standard 3-Way RF Splitter for CATV Signals
http://www.radioshack.com/product/index.jsp?productId=2284619

* Channel Master 4-Output Indoor Distribution Amplifier
http://www.amazon.com/Channel-Master-4-output-distribution-
amplifier/dp/B000GGFXW8/

* 1-to-4 Bi-Directional Cable-TV Amplifier
http://www.radioshack.com/product/index.jsp?productId=2103093

Beyond that are Made-for-the-Shortwave-Radio-Hobby Devices :
[These tend to be a bit Pricy }

* RF Systems SP-3 Antenna Splitter / Combiner
http://www.universal-radio.com/catalog/preamps/0973.html

* RF Systems DA-4 Distribution Amplifier
http://www.universal-radio.com/catalog/preamps/0601.html

Also there are Made-for-High-Frequency-Radio-Use Devices :

* ICE -Receive Signal- Passive Splitters
http://www.iceradioproducts.com/reconly.html#Receive%20Signal
RF - HF @ 1.8-30 MHz > 4-Outputs : Model # 111-4A

* ICE Active Distribution Amplifiers
http://www.iceradioproducts.com/reconly.html#Receive%20Signal
RF - HF @ 1.8-30 MHz > 4-Outputs : Model # 112-4A

I would recommend the ICE Model 112-4A as being the better of the
above 'choices' considering : Performance + Quality + Cost = Value.

hope this helps - iane ~ RHF {pomkia}

Someone should produce an external MW ferrite rod accessory antenna for the E1. It could be mounted on top of the case and would rotate like the ferrite rod on the Panasonic RF-2200. The signal output of the rod would connect to one of the external antenna inputs of the E1 with proper impedance matching, if necessary.

I have one, it is called a Quantum Loop. Works like a champ. It just
doesn't mount "on top."

HD radio is a fraud and a farse - HD Radio has only 60% the coverage of
analog, and causes adjacent-channel interference. Sales of HD radios
have been anemic, as the general public is not buying into this joke of
a technology:

Agreed. I have bought about 8 of them, including several for gifts. It is just wonderful.

The first one I bought to see if I got a better signal from one of our FMs which was obstructed by a mountain, and it did great. In the process, I found it was great for all marginal signals, and had very nice quality on all... surprising in a small mono receiver. The AM reception is also very good, with a nice blend of good sound and decent sensitivity and selectivity.

I usually don't joke about the subject. The transformer is really no
different than the opto-isolator for DC isolation. One couples primary
and secondary circuits magnetically and the other with photons.

Either one will not be an effective block unless they are designed to
prevent passing common mode RF noise. It takes very little in stray
capacitance or mutual inductance to go around the opto-isolator.

National Socialism exercises control over the means of
production while leaving the ownership in private hands.

Communism exercises control over the means of production
while claiming ownership of those means of production.

Capitalism leaves ownership and control of the means of
production in private hands.

National Socialism and Communism are just two sides of
the same socialist coin. They are more alike than they
are different. If National Socialism and Communism are
180 degrees apart, then Capitalism is orthogonal to
both of those socialist systems.

If you are an electronics engineer, I'd venture you are a damn poor one.
The opto-isolation I proposed would be about 10,000x more isolation
than an audio xfmr.

Coupling of rf noise though the audio xfmr is just a question of "how
much?" Indeed, I'd be surprised if they even provided proper shielding
(grounded metal sheet over inner winding with ends of sheet insulated
from each other) of one winding from another!

If the core material is ferrite, like in the cheap china junk, I'd throw
it away for such uses. Silicate-steel laminations might be usable when
rf is a problem ...

And I fear religious kooks like you.

Are you claiming Koresh was innocent? Even if he was before all the shit went down, after he and his deluded followers shot the feds, that ended any claim of being innocent. That his followers were too weak minded to save themselves is sad, but it was their choice. What exactly do you think the feds should have done, and how long should they have waited to finally go and end it?

Longwire Antenna "Overloading" Eton E5 'portable' AM & FM Shortwave
Radio
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11923

- - - In Shortwave-SWL-Antenna@yahoogroups.com,
- - - Mike Chambers <mikechambers@...> wrote:
-
- I have an Eton E5 portable, connected to a 60 foot
- longwire antenna. The antenna runs out the window,
- up the side of the house, and then 60 feet horizontally.
-
- This has dramatically improved signal strength, but
- I am now having two problems:
-
- 1. I am picking up strong AM stations on all of the
- shortwave frequencies(up to 10,000 Khz). This is
- making it difficult to find and listen to shortwave
- stations.
-

MC - Try a AM/MW Band 'Rejection' Filter : 500 kHz to 1800 kHz.
These are also call High-Pass-Filters for Shortwave Listeners
(SWLs) because the Shortwave Listener want to Hear the High
Frequencies abouve 1.8 MHz and 'Reject' the Lower Frequencies
below 1.8 MHz -aka- the AM/MW Broadcast Band.

Take a look at the Par Electronics "BCST-HPF" which is
designed to help ShortwaveListeners (SWLs) cope with
radio interference from strong AM/MW Radio Stations
which broadcast below 1700 kHz.
http://www.universal-radio.com/catalog/filters/4426.html

Also consider trying a Pre-Selector between the Antenna
and your Eton E5 'portable' AM & FM Shortwave Radio.
Read - 500 Ohm Antenna using Matching Transformer {Balun} ?
-or- Antenna Pre-Selector ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11909

The Do-It-Yourselfer's Shortwave Antenna built from
TV type Parts :
A very simple TV type Parts Shortwave Antenna uses
a TV 300 Ohm to 75 Ohm Balun which usually cuts-off
most Frequencies below 5 MHz and thus functions as
a AM/MW 'Rejection' Antenna for Shortwave Listeners

(SWLs) who live in Urban Areas with several AM/MW
Radio Stations that cause Interference and Out-of-Band
Signal Overload Problems.

Read - Consider a simple 'build-it-yourself' Shortwave
Listener (SWL)Antenna made from TV Parts.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6233

- 2. I seem to be picking up a lot of RF interference.
- I am guessing this is from the electrical system in
- my house (which is very noisy).

-R- That would be a good guess.

- I am pretty new to shortwave, and antennas, but am
- trying to learn. If I hooked up a shielded coax to
- run from the horizontal longwire to the radio, would
- that help with the interference?

-R- Yes a Coax Cable feed-in-line from the Antenna
to the Radio usually works better than plain old
Wire -or- just Insulated Wire.

- What about the overloading?

-R- Overloading and 'portable' AM & FM Shortwave Radio
is usually caused by Too-MUCH-Antenna.
WHAT ? - A smaller / shorter External {Out-Side} Antenna
and Ground System that provides a reasonable level of
RF Signals to your 'portable' AM & FM Shortwave Radio
{About 5-9 S-Units} generally is good enough to let you
hear-all-that-you-can-hear -with-out- Overloading the
Radio and causing more problems then simply using the
Radio's built-in Whip Antenna.

The 'basic' {Low Noise} Inverted "L" Antenna :
1 - Out-Side and Away-from-the-House
2 - Coax Cable feed-in-line
3 - Ground Rod
4 - Matching Transformer
5 - Wire Antenna Element
6 - Connect the Outer-Shield of the Coax Cable to the
Ground Rod -and- Mount the Matching Transformer on the
Ground Rod.
7 - Rig the Wire Antenna Element in the shape of an
Inverted "L" starting with a Vertical-Up-Leg from the
Ground up to the Horizontal-Out-Arm.

Take a Look at the Par Electronics End-Fed Shortwave
Listener's (EF-SWL) Antenna.
http://www.universal-radio.com/catalog/sw_ant/2205.html
The Wire Antenna Element is only 45 Feet long : It can
be Rigged 15Ft-x-30Ft and produce very good results with

most 'portable' AM & FM Shortwave Radios.
Read - The Par Electronics End-Fed Shortwave Listener
"EF-SWL" Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11828

- I have seen a mention of a balum being useful for
- longwire antennas. Would that help me in this situation?
- If so, is there any particular type of balum I need
- (again, I am learning about this stuff).

-R- The Balun {Matching Transformer} is only one part
of a Complete Antenna & Ground System. While the Balun
is important. It is the 'entire Antenna & Ground System
that produces good Signal Levels along with lower Levels
of Noise.

Eton E1 Radio -and- The "Green" Antenna for AM/MW Radio Reception
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11921

WAS - Is It True The Eton E1 Radio Uses The Whip
For An AM Antenna ?

- - So for AM work, one should plan on using
- - an external AM loop with the E1.
-
- Someone should produce an external MW ferrite rod
- accessory antenna for the E1. It could be mounted
- on top of the case and would rotate like the
- ferrite rod on the Panasonic RF-2200.
-
- The signal output of the rod would connect to one
- of the external antenna inputs of the E1 with
- proper impedance matching, if necessary.
-

SG - They have one it is called the "Green" Antenna ~ RHF
.
.

729. Novice Questions

Newsgroup: rec.radio.shortwave
Date: 2007-01-08 05:41:20 UTC
From: JimC <avocat5@sbcglobal.net>
Message-ID: <4Qkoh.32602$Gr2.12177@newssvr21.news.prodigy.net>
Source record: 102777

The following questions have probably been addressed before, and if there's a FAQ or other source that would answer them, I would appreciate getting it. Basically, I would like to get a SW receiver sensitive and selective enough to receive foreign stations broadcasting news, commentary, music, etc., from countries such as China, Iran, France, Russia, etc. I don't think I need one sufficiently selective for HAM reception, but would like one with which I could pick up the national stations from a number of countries fairly reliably. (Apparently, BBC is no longer broadcasting directly to North America, and is only available via the web.)

I now have a Radio Shack portable that sold originally for around $150, but I haven't been able to use it conveniently. - It is controlled with multiple pushbuttons, which to me were a hassle. I think I prefer to have a dial of some sort, because it seems to make it more convenient to scan a band for signals that are reasonably strong. (I also miss the old green "eyes" that used to narrow down, or open up, when you centered on a strong signal. - But I'll be happy for a needle, or whatever.) Another problem with the RS portable is that it seems to use up batteries quite fast. - Perhaps I was doing something wrong.

1. Does anyone have suggestions for a table model (could be portable, but not required) suitable for this kind of use for perhaps $100 - $200?

2. Some sets selling on EBay seem interesting, but several of the sellers refuse to give any warranty whatsoever. (Not even a DOA guarantee.) That seems pretty unreasonable to me. In this price range, would it make more sense to buy a cheaper new receiver rather than take a chance on an Ebay sale?

3. If I prefer analog tuning of some type, am I typically limited to buying older, used equipment in this price range?

4. Are there sources other than EBay that I should consider?

Models that I have seen that seem to be good compromises include the Panasonic RF-4900 or RF-B600, the RF 2800?, etc., or the Radio Shack DX-394. Also, some of the cheaper, used Hallicrafters, or the solid-state Trans Oceanics, seem like reasonable buys. However, I don't want to get involved with checking out all the chokes, capacitors, etc.

Thanks for any suggestions.

Jim

> rf is a problem ...

You are very weird and you have poor comprehension. Go back and re-read
the thread and you will find that I did not recommend the transformer.
My post of a few lines stated that the opto-isolator would be not any
better than the transformer. I don't know where you get your ideas from
but you are one very confused individual.

The reason another poster thought the transformer would help is because
the problem was created by a ground loop. If the problem was a ground
loop the transformer or opto-isolator would help.

My thinking was always that it was a common mode noise problem with the
switching noise from the laptop getting to the radio through the
connecting cable. A ferrite clamp on core is a good solution. Ferrous
metals are much lower in inductance value than the ferrite and would not
work as well for a similar size core.

Why do you bother to post if you have no idea what you are talking about?

I find that it helps somewhat to turn off the screen. I have an iBook,
and I can lower the brightness to the point that the screen switches
off. Or you might be able to put the screen to sleep while the machine
continues to run.

They started changing long ago. The principal upon which things are
currently working is that it is better to hang 100 innocents than to let a
single guily person go free. Sad indeed.
```

In your previous post:

"I usually don't joke about the subject. The transformer is really no
different than the opto-isolator for DC isolation. One couples primary
and secondary circuits magnetically and the other with photons.

Either one will not be an effective block unless they are designed to
prevent passing common mode RF noise. It takes very little in stray
capacitance or mutual inductance to go around the opto-isolator."

See the part, "The transformer is really no
different than the opto-isolator for DC isolation. One couples primary
and secondary circuits magnetically and the other with photons."

Why in the hell would we even concern ourselves with dc isolation, it is
rf which is causing the problem ...

Now, see the part, "Either one will not be an effective block unless
they are designed to prevent passing common mode RF noise."

There would be NO coupling, other than a light beam--and I asked you,
are you claiming the rf is traversing the light beam? (and, if so, you
will notice that I implied ONLY AN idiot would site that as being a
problem in this case.)

Optical isolation would be an ABSOLUTE cure for his problem.

From: m II <c@in.the.hat>
Message-ID: <bOloh.117779$YV4.68173@edtnps89>
Source record: 102785

Source unknown...

1. Two antennas met on a roof, fell in love and got married. The ceremony wasn't much, but the reception was excellent.

2. A jumper cable walks into a bar. The bartender says, "I'll serve you, but don't start anything."

3. Two peanuts walk into a bar, and one was a salted.

4. A dyslexic man walks into a bra.

5. A man walks into a bar with a slab of asphalt under his arm and says: "A beer please, and one for the road."

6. Two cannibals are eating a clown. One says to the other: "Does this taste funny to you?"

7. "Doc, I can't stop singing 'The Green, Green Grass of Home.'" "That sounds like Tom Jones Syndrome." "Is it common?" Well, "It's Not Unusual."

8. Two cows are standing next to each other in a field. Daisy says to Dolly, "I was artificially inseminated this morning." "I don't believe you," says Dolly. "It's true, no bull!" exclaims Daisy.

9. An invisible man marries an invisible woman. The kids were nothing to look at either.

10. Deja Moo: The feeling that you've heard this bull before.

11. I went to buy some camouflage trousers the other day but I couldn't find any.

12. A man woke up in a hospital after a serious accident. He shouted, "Doctor, doctor, I can't feel my legs!" The doctor replied, "I know you can't - I've cut off your arms!"

13. I went to a seafood disco last week...and pulled a mussel.

14. What do you call a fish with no eyes? A fsh

15. Two fish swim into a concrete wall. The one turns to the other and says "Dam!"

16. Two Eskimos sitting in a kayak were chilly, so they lit a fire in the craft. Unsurprisingly it sank, proving once again that you can't have your kayak and heat it too.

17. A group of chess enthusiasts checked into a hotel and were standing in the lobby discussing their recent tournament victories. After about an hour, the manager came out of the office and asked them to disperse. "But why," they asked, as they moved off. "Because," he said, "I can't stand chess-nuts boasting in an open foyer."

18. A woman has twins and gives them up for adoption. One of them goes to a family in Egypt and is named "Ahmal." The other goes to a family in Spain; they name him "Juan." Years later, Juan sends a picture of himself to his birth mother. Upon receiving the picture, she tells her husband that she wishes she also had a picture of Ahmal. Her husband responds, "They're twins! If you've seen Juan, you've seen Ahmal."

19. Mahatma Gandhi, as you know, walked barefoot most of the time, which produced an impressive set of calluses on his feet. He also ate very little, which made him rather frail and with his odd diet, he suffered from bad breath. This made him. A super calloused, fragile mystic hexed by halitosis .

20. And, finally, there was the person who sent twenty different puns to his friends, with the hope that at least ten of the puns would make them laugh. No pun in ten did.

- Models that I have seen that seem to be good compromises
- include the Panasonic RF-4900 or RF-B600, the RF 2800?, etc.,
- or the Radio Shack DX-394. Also, some of the cheaper, used
- Hallicrafters, or the solid-state Trans Oceanics, seem like
- reasonable buys. However, I don't want to get involved with
- checking out all the chokes, capacitors, etc.
-
- Thanks for any suggestions.

-
- Jim

JimC,

Look at this List of the "Modern Shortwave Receiver Survey"
-hosted by- DXing.Com => http://www.dxing.com/rx/rxindex.htm
Why not wait an extra month or two and Save-Up and buy
something in the $300 to $450 price range like the :
Drake SW2
JRC NRD-515
Kenwood R-2000
Realistic DX-394
Yaesu FRG-7700

Also take a look at the "Universal Radio Used and
Demo Equipment "For Sale" {Trade-In} List.
http://www.universal-radio.com/alert.html

Plus there is "Bob's Bargain Bin" at Grove Enterprises
BBB => http://www.grove-ent.com/bbbshortwave.htm
Note - Grove Enterprises is now listing Bob's Bargain Bin
items on eBay.

Here is "What's-Out-There" NEW in your price range :

The Sony ICF-SW7600GR is a very good 'portable'
AM & FM Shortwave Radio - Priced around $150.
http://www.universal-radio.com/catalog/portable/0360.html
http://www.jr.com/JRProductPage.process?Product_Id=1627439&JRSource=googlebase.datafeed.SON+ICFSW7600GR

The Sangean ATS-909 is also a very good 'portable'
AM & FM Shortwave Radio - Priced around $200.
http://www.universal-radio.com/catalog/portable/1909.html
http://www.jr.com/JRProductPage.process?Product=18960

Then again the new Redsun RP2100 is well thought of as a
'portable' AM & FM Shortwave Radio - Priced around $100.
http://cgi.ebay.com/_W0QQitemZ260073332461

hope this helps - iane ~ RHF

Hello JimC,

I will add my 2 cents : If you eventually go for a portable, you can
also consider the Degen DE1103 or Kaito KA1103 (same product with
different brands), which has a very good reputation in the SWL forums.

Kaito KA1103 can be purchased from USA with US Warranty for less than $100.

You can also have a look to eHam reviews :
http://www.eham.net/reviews/products/8

Hope this helps,

Charly

Mike,

I had the same issue, and when I first attempted it I clamped it straight ono the cable and still had noise "BUGGER!!". This is when I read some where to coil the cable to form 3 loops / turns about 3-4 fingers wide and I clamped two ferrite cores from RS.

That did the trick and the noise is 100% gone.

Hope that helps.

Regards
Mark

> via the web.)

The BBC is still out there. Sometimes you can get it, sometimes you can't.

That's the way of shortwave. Signals propigate (spread out) by bouncing on
the upper atmoshpere. Sometimes they go all over, sometimes they just bounce
to a few places, sometimes, they don't bounce at all.

Radio waves at lower frequenices bounce better at night, so you can often
hear things on 4-7 mHz, that you can't hear on 11-17mHz. During the
daytime it reverses. Propigation changes over 11 year cycles due to sunspot
activity. We are at a low now, so there is not much hapening. Some days
are really bad, some are good. In a few years, it will be "wonderful" again.

The other problem is that in some places it's daytime where they are
and night where you are and vice versa. This makes it easy on some frequencies
and impossible on others. Sometimes you only get 15 minutes a day of propigation
from where you are to where you want to listen and it's at 3am. :-)

Personaly, I recommend the Kenwood receivers. They range from the R-600,
which is the oldest to the R-5000, which was their last.

Geoff.

751. The Cambridge Soundworks CD740 Radio -COMES ALIVE- With The "Green" Antenna

Newsgroup: rec.radio.shortwave
Date: 2007-01-08 11:54:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1168257247.197258.215090@11g2000cwr.googlegroups.com>
Source record: 102799

Hello Everyone,

As many of you know I have a Cambridge Soundworks CD740
Radio and it real has very poor AM/MW Radio reception.

"What Are ? Your Kitchen and Bedside Radios = AM & FM plus Shortwave
http://groups-beta.google.com/group/rec.radio.shortwave/msg/12c85373df180542

.
I even when so far as to post this in the above Message :
NOTE - Do Not Buy The Cambridge SoundWorks CD 740 Radio
for AM/MW Listening - It is a "POS" for AM/MW Reception.
- I have yet to make a AM/MW Antenna for it that
Does Not Require the AM/MW Antenna to be remote from
the Radio due to feed back and distortion and must be
re-tuned for each Radio Station.
- With most other common AM/FM "Table" Radios :
I can use an Un-Tune Two-Three Foot AM/MW Loop Antenna
that is resonant about 860 kHz and Tune the entire
AM/MW Broadcast Band without any problems. Position
the Loop Antenna for the Best Recetion of :
* 650 kHz {KSTE}
http://www.talk650kste.com/main.html
* 860 kHz {KTRB}
http://tinyurl.com/5bvxg
* 1530 kHz {KBHB}
http://www.kfbk.com/main.html
and all the rest of the SF Bay Area AM/MW Radio Stations
come in very well.
.
Cambridge Soundworks CD740 Radio - Reception Questions ????
http://groups-beta.google.com/group/rec.radio.shortwave/msg/a7c0bc20255038bb

.
Cambridge SoundWorks # 740 Radio - Loop Antenna Up-Sizing ?
http://groups-beta.google.com/group/rec.radio.shortwave/msg/54103c7b1e3fa6af

.
Well last night the Cambridge Soundworks CD740 Radio CAME ALIVE !
on the AM/MW Radio Band with Good Listening Radio Stations on about
every-other Frequency and I did not have to retune with each change of
the Radio Station. Guess all I really ever need was The "Green"
Antenna !
.

What Miracle-of-Technology made this Happen . . . The "Green" Antenna !

Now to wait and re-test the Cambridge SoundWorks # 740 Radio
during the Day to See {Hear} What's-Out-There ! Report to follow.

yes the 'green' antenna - iane ~ RHF

Make a folded dipole out of 300 ohm TV twinlead and get it as high as you
can. It'll be directional and have a bit of gain and connect it to the
antenna terminals of your radio. If the folded dipole helps but not quite
enough you'll have to find a multi-element FM antenna and put it in the
attic or on the roof directed at the station or there may be a better signal
reflecting off a hill.

It'll fail commercially but it definitely helps reception in some
cases.

According to what I've read, these dirndl-wearing cuties chose the name "Prussian Blue" in reference to their ethnc heritage and the color of their eyes. What's ironic is that Prussian blue, a pigment used in paints, is a cyanide compound.

John Smith I wrote:
> A family runs on socialism. The father and mother work to support the
> home and share the funds and material belongings with the whole of the
> family.

Benevolent capitalism is not socialism. Ideally, the family
capital is owned and controlled by the adults and benevolently
shared with the children who should have little say in how the
family capital is saved, invested, or spent. Families who
practice socialism (equal rights and equal shares for children)
are families in trouble.

> Any tribal, village, and other forms of gov't operate on socialism, the
> greater good for the whole.

The pilgrims tried socialism and almost starved to death.
Only when they converted to capitalism did they survive.
Socialism doesn't work because the lazy people don't work
and the non-lazy people are cheated out of their return
on investment - so why bother working?

> Where I live, capitalism has the homeless begging me for money. Single
> mothers working and not being at home--their offspring forming gangs and
> becoming such a danger I fear to go out at night. The gov't is granting
> social security, hospital care, schooling, public services to illegal
> aliens (I say criminals!) and WE are paying for it. Young people hanging
> around without jobs to match them up to while illegals work for cheap
> wages, etc., etc.

Please don't blame capitalism for the existence of a breeding
herd of welfare folk who believe the world owes them a living.
Socialism rewards failure - Surprise! More failures are breeding,
more people are failing, and WE are paying for it. That's certainly
not the fault of capitalism which is being squeezed out of existence
by creeping socialism. Capitalism rewards success and penalizes
failure. That's the opposite of what is happening today.

I saw a neat T-shirt the other day. Under a picture of Bill and
Hillery appeared the words: *Do Not Resuscitate!*

> The windows in my car are smashed if I have to leave it parked in a
> strange area overnight. My cars are stolen! People sneak into my back
> lot and sleep, drink, do drugs, defecate and attempt to live there. If
> the police pick them up, they are back that night ...

Typical of people raised on governmental handouts, i.e. socialism
at work. They have lived for generations under socialist handouts
so they think your property belongs to them. That's the basic
problem with socialism. Socialism says your life belongs to the
state. Capitalism says your life belongs to you. Why are you
choosing socialism, the very thing you are complaining about?

> One of my neighbors put up high a high iron fence, state of the art
> burglary system, etc. and tried to isolate and keep his family safe. His
> daughter was shot and killed last year at a fast gas station, he and his
> wife moved ...

Socialism rewards failure and punishes success. What do you expect?
Your successful neighbor is being punished. All of us successful
folk are being punished. You are complaining about the fruits of
present day creeping socialism and yearning for the past glory
days of a more capitalistic society.

> Just a decade or two 85%+ of the people in this area owned their own
> homes, now it is more like 25%. A mere 30 years ago the moral fiber of
> this community was so much different ... I am NOT thrilled with
> capitalism. Indeed, I am nearing the time when it is time to try
> something else--even if it is wrong!

Uhhhh John, this nation has been getting less and less capitalistic
and more and more socialistic for half a century or more. The
"chicken in every pot" mentality is responsible. People raised under
The New Deal, The Great Society, and Hillery's socialized health
care concepts are demanding that you give up your chicken, exactly
as was predictable from the start. Since you support socialism, why
are you complaining about giving up your chicken?

> > cuhulin

This idea could work very well, I think, but the methods should be handled carefully. In lieu of that, here in the County in CA where RHF (sometimes) and I live, there are household hazmat collection centers for homeowners to bring their hazmat stuff free (including fluorescent bulbs and batteries, among other things). Admittedly, this forces a person to make a special trip to the hazmat collection center. Despite this requirement, the system has worked well so far - Alameda County is, overall and statistically, one of the more conscientious counties in CA when it comes to properly disposing of bad stuff and recycling good stuff.

I'm not sure if a point-of-sale collection center would work *better* or not (to be fair, every hardware / department / drug / grocery store that sells them would need to provide the service, which would probably include collection, separation into types and haul to a *business* hazmat waste collection center.) This system, as convenient as it would be for the consumer, would introduce another "middle-man" into the chain, which would likely insert some new complexity, and possibility for irresponsibility, to the system.

Yes, thanks for all of this - a good reminder. Unfortunately, coal
remains plentiful, and not only China but the US and several other
nations are eyeing coal and coal-derived fossil fuels as an important
next step in energy production. It will require significantly more
costly technology to burn it cleanly, not only for reduction of mercury
and other heavy metals, but also, as you mention, to reduce acidic
emissions.

Thanks for the information. - What is the general recommendation
regarding buying used vs new? Is this the type of equipment that is
fairly rugged, and reasonably safe to buy used or alternatively, likely
to have problems and require specialized care or servicing?

As stated, several of the Ebay merchants seem to think they can absolve
themselves of all liability (even if a problem is entirely their fault)
by merely posting a disclaimer of any liability. In other words, even if
their ad says that the unit is "working", and it it's dead when I get
it, I'm out of luck according to their disclaimer. - They simply blame
it on the shipper, or whatever. (I happen to be an attorney, and such a
disclaimer is meaningless under many circumstances. But if that's their
attitude, I don't want to hassle with them in the first place.) In any
event, what's the general experience in buying used receivers? Would
newer, solid-state equipment be less susceptible to problems?

Thanks,
Jim

I agree with this completely, at least in principle, but reality isn't perfect. Koresh's followers decided, or were forced by he and the rest of the cult leadership, to stay. Once people were shot, The feds weren't going to walk away, and Koresh and his deluded followers weren't coming out, and it went on and on, some people did come out, for whatever reasons, maybe they had a choice to stay or not. If they didn't, it's more blood on Koresh and the cult leadership's heads.

Swapfest 2007 at Little Joe's Country Gold
The Swapfest will be Saturday, January 13, 2007. Swapfest hours are
8:00
am to 3:00 pm. We will be at the same location as last year, Little
Joe's Country Gold, 7405 Old Pearsall Road (southwest side of San
Antonio). For a map click here.
http://tinyurl.com/y8p4dy
Admission is $4 at the door. Swapfest set up will open at 6:30 am with
the doors opening at 8 am.

Tailgating Available! - In past years, this has been totally an Indoor
event, but this year tailgating IS allowed. Limited tailgating spaces
are available at $5 each. Please no swapping before 8:00 AM Saturday.

PDF copy of Inside <http://w5sc.org/Docs/Data/2007_Flyer_inside.pdf>
and Outside <http://w5sc.org/Docs/Data/2007_Flyer_outside.pdf> of
flyer
mailed out.

Here are some of the Dealers that will be at the Swapfest this year!
K-COMM <http://kcomm.biz/>
Jubilee Enterprises <http://www.shopjubilee.com/>
The Sign Man <http://www.thesignman.com/> of Baton Rouge
HF Projects <http://www.hfprojects.com/hfprojects/>

VE Testing
Come upgrade or get your first ham license at the Swapfest! We test at
a
nearby library. Pre-registration is encouraged. Contact
hamtest@... <mailto:hamtest@...> .

The Swapfest VE test session will be from 9 ï¿½ 11 AM at the Johnston
Library, 6307 Sun Valley Drive
http://tinyurl.com/yxj7px
, off Medina Base Road and SW Loop 410 (exit 3 and 3B). Bring $14 test
fee and photo ID. People upgrading also need to bring originals and
photocopies of your ham license and applicable CSCEs. Email
http://tinyurl.com/wvno6 for more info.
Prizes!
Alinco DJ-596 Dual Band 5 Watt HT Transceiver (Early Bird)

Icom 718 HF Transceiver (Grand Prize)

Tables are $8 at the door.

Dealer Tables are $12 each. For a Dealer Registration Form click here.
<http://w5sc.org/Docs/SwapfestDealerRegistration2007.pdf> Dealers, you
may park your RV in the parking lot Friday evening. Two admission
tickets are provided with each dealer registration. Dealer set up is
Friday evening from 6 PM to 9:30 PM and Saturday morning from 6:30 AM
to
8 AM. If you have additional questions, please contact the 2007
Swapfest
Chairman, J C Smith, N5RXS, home phone (210) 522-6167, cell phone
(210)
849-3404, or email n5rxs@... <mailto:n5rxs@...> .

<http://w5sc.org/Docs/Data/2007%20swap%20fest%20%20Registration.pdf>

ARRL Forum
Dr. David Woolweaver K5RAV, ARRL West Gulf Division Vice Director,
will
host the ARRL Forum from 11:30 AM to 12:30 PM.

Food and drinks are available on site at competitive prices, including
coffee, hot chocolate, soda, breakfast tacos and more.

Talk-in will be on 146.94 (-, 179.9 PL), and "chat" will be on 444.100
(+, 179.9 PL). Be sure to say "hi" to the talk-in volunteers at the
table by the back door.

Please address all Swapfest inquires to n5rxs@...
<mailto:n5rxs@...> .

Club History
San Antonio Radio Club from 1919 to 2007

Bexar County's Communication Resource since 1919
The San Antonio Radio Club is one of the oldest Amateur Radio clubs
that
is still around and operating. It was founded in 1919 as the "Bexar
County Radio Association" and reorganized in 1929 as the "San Antonio
Radio Club". We are one of the oldest affiliated amateur radio Clubs
of
the American Radio Relay League (since January 2, 1920).

One reccomendation is to get an old Stereo Tuner or Reciever from the late
1970's early '80, before they went digital. One of the higher end brands
like HH Scott, Marantz, Sansui. Before they went to Digital tuning.
Around that era, performance mattered and they had low noise FET RF
amplifiers and modern ceramic IF filters and detectors. Less alignment
needed than an older one but no performance compromises that they made
with the digital tuned stuff.

Or get a good car radio and a 12 volt power supply.

And then get a rooftop antenna. A 6 to 10 element FM band Yagi.
Radio Shack had one, and maybe a hardware store out in the fringes
could order one for you if they carry Channel Master or one of the
other remaining brands.

One resource is (former?) electronics magazine columnist Don
Lancaster's reprint archive on www.tinaja.com. He did a sequence
of columns back about 15 years ago in Radio-Electronics/Electronics
Now about his attempts to do what you're trying to do. All sorts
of other antenna suggestions.

Source record: 102824

Thanks for the helpful information. - As to waiting until I can afford a $350 - $450 unit, the problem is somewhat a WAF issue. - I already have a number of other hobbies, each of which cost money, and I thought I would start with a lower priced unit and see whether I wanted to go further with it. (One possible next step may be getting a ham license and using a transceiver on my sailboat when away from cellphone or vhf range.)

There are several units on Ebay that are within my present price range, but I'm not sure whether I want to risk getting one of the older units. - Here's a few that are coming up to the final day soon: Panasonic RF-2900, 300, and 4900. (The RF-3000, 31 band, seems like a good buy.) Hallicrafters, various tubed moodels. Heathkit SW-717. Grundig Satellit 2100. (This one is well recommended, but it's apparently rather old, and I think the price will soon go up beyone my preferenced range.) Radio Shack Realistic DX-302 (around $80?) and DX-394 ($100 - $140?). (The RS models are apparently not considered great performers, but they are fairly new, they seem to include analog and digital tuning, and they may be a good dollar compromise. The DX-394B model seems to have a better reputation, but it's more $$$.

Anyone have any comments regarding any of the above?

Thanks,
Jim

Most radios have multiple pushbuttons and a dial...I'm not sure which
push buttons would be a hassle.

> I think I prefer to

> DX-394.

The 4900, 4800, 2600, 2700 and 2800 are all analog radios with a disigtal display added on. The RF-B600 and DX394 both use a full digital display.

Of that list I would go for the RF-B600 because it is full digital display with keypad and has both a built-in antanna as well as connections for external antennas.

Alternatively you might look at one of the new digital portables from Degen, Sony or Grundig. They will perform as as well as the radios you have listed and will be a lot smaller.

> Also, some of the cheaper, used Hallicrafters, or the
> solid-state Trans Oceanics, seem like reasonable buys.

I would avoid older tube radios unless you have an interest in fiddling and are willing to put up with generally inaccurate displays, etc.

All about GMRS at URL:
http://ac6v.com/rstore.htm#GRMS

The General Mobile Radio Service has eight repeater frequency pairs. A radio repeater uses one of these pairs of frequencies to receive and simulcast a radio transmission it receives on the repeater input frequency. Repeaters are usually placed on hilltops, mountains, towers, or tall buildings. When the repeater receives a signal from a hand-held or mobile radio that signal is rebroadcast on the repeater output frequency. The repeater can broadcast over a much wider geographical area than a hand held or mobile radio. Most GMRS users will not own a repeater of their own. They will most likely share a repeater system with others. When you use the repeater you make it possible to communicate with your family over a much wider area.

Frequencies are shown at URL:

http://ba-marc.org/writeups/gmrs-frs-freq.htm

These are NOT the same as Amateur Radio Frequencies

GMRS requires an FCC license for GMRS operation

Good Luck -- CL

Will MSN direct be used with IBOC-AM? Using IBOC-FM seems alot easier with
the antenna and bandwidth considerations.

Is there much consumer interest in MSN direct?

I wouldn't worry about it - this is just a gimmick, that requires a
subscription fee, and is broadcast as sub-carriers over the FM Band,
and is just a glorified pager system:

"As a thank-you to current subscribers and an incentive to those who
haven't yet signed up, Microsoft is offering an additional three free
months of MSN Direct service to all yearly subscribers. The
subscription price is $59 for a full year (with three months free)* or
$9.95 a month (with the first month's subscription free)."

It requires externally mounted dipole antennas - the general public is
not going to bother with this joke of a technology.

The three I have work fine in the LA basin. In fact, our AM, which is
unlistenable inside our building in analog, produces a clean HD signal at
the same location.

There is NO clean HD signal, it is all QRM.

Run along now, and shill elsewhere.

I hope I'm not asking the obvious, but are you closing the lid on the notebook computer? That kills the noise from the LCD and CCFT.

Note that the switching supply puts noise on the power line, which in turn is picked up by the radio. You can try to put the switcher on it's own isolation, be it filtered power line strip or perhaps isolation transformer.

808. Re: Novice Questions

Newsgroup: rec.radio.shortwave
Date: 2007-01-08 23:01:41 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1168297301.387409.142380@s34g2000cwa.googlegroups.com>
Source record: 102856

Dear Jim,

It is my firm belief that anyone looking for a shortwave receiver which will actually be used on a daily basis should buy new. When you buy used, you are buying "someone else's problems." (Why, in general, would someone sell a radio that is perfectly good?) This comment does not apply to collectors/restorers but you are not in that category or in the situation where someone you know personally is selling a deceased spouse's radio ...

I would not recommend buying from any of the eBay sellers/dealers (including both used and new items) because you are often buying a "pig-in-a-poke" and you will get no US warranty. For your first modern, serious receiver, I think it would be better to buy from an established dealer which will stand behind its products and will offer a warranty. Later, if you wanted to try something different, well, then you could try eBay. (Just note that when you buy on eBay, you are, in effect, gambling with your money.)

I would recommend the Sony ICF-SW7600GR as it is sensitive, selective, very well built, and has a good track record for performance and longevity. This radio is available from various dealers including Universal Radio, AES, J&R Music World, and Amazon.com. The price is $150.00 or less.

As we are now in the shortwave "doldrums" - the bottom of the 11-year sunspot cycle - an auxiliary antenna is helpful. The Sony comes with a "wind-up" antenna which can be attached to the whip and often improves reception. The radio is good enough that it can handle larger external antennas as well.

The other new radios mentioned here are all good ones according to their owners but they are all manufactured in China and have no real track record. (The Sony is manufactured in Japan.)

There is a learning curve with the Sony radio, as there is with any piece of electronic equipment, but I think you would find that operation of this receiver is quite straightforward and easy to master. I believe you would be pleased with it.

The BBC is still actually quite easy to hear, at least on the US east coast. From 1900 UTC (2:00 PM EST) you can hear them on 12095 kHz; after 2100 try 9480 or 5875 and from 2200 try 9480 or 5975. At 0300 they are on 6145 for another hour. They can be heard at other times during the day as well and, of course, there are many other broadcasts - one of my favorite stations is Radio Netherlands (0000 on 6165 with a

repeat of the show at 0100 on the same frequency; if you're a night owl, the show is repeated again at 0500, again on the same frequency. I also enjoy shows on China Radio International, Radio Taiwan International, the Voice of Russia, and Radio Bulgaria.

Best of luck,

Joe

Good for you. Enjoy your radio.
In all the posts knocking it, not one has said "I tried it and I
didn't like it"
So basically the negative posts are just bilge

Do tell what you think of it after you play for a bit.

Check out Genesis 18:20 forward.

18:20 And the LORD said, Because the cry of Sodom and Gomorrah is
great, and because their sin is very grievous;

Abraham couldn't find ten righteous in the entire city or God would not
have destroyed it. 18:32

In chapter 19 the men of the city wanted to rape the angels who came to
Lot as well as wanting to rape Lot because he "judged" their deeds!
They even turned down two virgin daughters of Lot because of their lust
for men.

19:7 And said, I pray you, brethren, do not so wickedly.

19:8 Behold now, I have two daughters which have not known man; let me,
I pray you, bring them out unto you, and do ye to them as is good in
your eyes: only unto these men do nothing; for therefore came they under
the shadow of my roof.

19:9 And they said, Stand back. And they said again, This one fellow
came in to sojourn, and he will needs be a judge: now will we deal worse
with thee, than with them. And they pressed sore upon the man, even Lot,
and came near to break the door.

Yes, Just a nice "loving" bunch who only wanted to "live and let live"
just like many of them are today! NOT!

and they had a price to pay -- but not only them, the entire land area
around it. Listen....

19:24 Then the LORD rained upon Sodom and upon Gomorrah brimstone and
fire from the LORD out of heaven;

19:25 And he overthrew those cities, and all the plain, and all the inhabitants of the cities, and that which grew upon the ground.

SIN HAS CONSEQUENCES! Far reaching consequences. Go ahead, live in your little dream world.

Romans 1:28 pretty well sums up the condition in FAGville!

Ro 1:28 And even as they did not like to retain God in their knowledge, God gave them over to a reprobate mind, to do those things which are not convenient;

I would say yes to both.

Sounds like something is arcing. Could even be his own antenna if it is
a single wire antenna without a DC path to ground.

Details, details. What? You want to know how it will work before you buy it? Apparently the fact that it is HD is all you need to know.

It's not really a radio. It's a recepter, which I guess should be spelled receptor...

My cellphone charger makes that noise on MW because I leave it plugged
in even when not in use. During charging, it makes a zipzip noise
instead. Start unplugging things that might be on standby.

Prussian Blue isn't particularly toxic as the cyanide is very tightly
bound to the iron. It's actually used to sequester ingested radioactive
cesium and thallium.

John Smith I wrote:
> No, this capitalism is not great today Cecil :(

Your problem is in thinking that what we have today
is capitalism - it is not! Everything that you
presently complain about is the result of creeping
socialism and the breeding of welfare masses. We
were more capitalistic in those good old days that
you long for. Today failure is rewarded and success
is punished. That is the opposite of capitalism.

Strom is a life-long, well-known white supremacist and Nazi.

Google "Kevin Alfred Strom" and read the material about him. Pay
special attention to the articles from the Southern Poverty Law Center
(SPLC).

His only contribution to amateur radio was to encourage a group of
middle-age, lardassed, semi-literate wackadoodles to congregate every
Saturday night on 3950 where they called themselves the "Liberty Net"
-- and where they accomplished nothing except ruining a perfectly good
frequency.

For the first time ever, I've heard a longwave broadcast station!
Radio France International on 162 kHz coming in faintly but enough to
tell it's French at 1:15 AM EST in central Pennsylvania. I'm using a
WinRadio G313e fed by an LF-800 active antenna on a 10-foot pole in
the backyard. I was hoping this setup would get me some longwave
broadcasts this winter because it gets more beacons than I can keep
track of.

they also have served in part to to highlight the LACK of effectiveness
of the alleged Code filter in the ARS and thus I supose their efforts
were not a complete waste

they serve as a bad examples the real problem with bad examples IMO is
that they generaly exist in excessive numbers

the misuse of the apostrophe in this newgroup is simply driving me batty! The apostrophe is to be used for possesives and contractions, NOT plurals! I spoke to my domestic partner (i.e. husband when this country makes gay marriage legal which is WAY PAST DUE!) and he agreed that I should say something. The problem is just one more example of why civilization is in decline.

There are two models, one HD and the other analogue only. The non-HD model
is about the best desktop radio I have ever had, AM and FM.

My God but you do talk a load of rubbish. Never, ever, anything
actually related to the topic, just mad ramblings.

Sadly, I used to have you killfiled, but since changing to Google
Groups, I haven't figured out whether that possible, so you started
popping up again with your drivel. Soon as I work out how to killfile
you again, I will.

886. Help ID Asian Station on 14.500 MHz AM

Newsgroup: rec.radio.shortwave
Date: 2007-01-09 10:48:33 UTC
From: AussieDrifter <Mark__Rutherford@hotmail.com>
Message-ID: <envru4$76b$1@news-02.connect.com.au>
Source record: 102684

G'day All,

Hoping or some input on a station that I heard a few times on 14.500 MHz AM at sig 57 here in Canberra Australia. Its currently Tuesday 1041 UTC and I've been listening for past 30 mins. The station is constantly playing Asian Instrumental Music is the best way to describe it.

My Passport to World Band Radio book obviously does not have it listed as its truly out of allocated SWBC Bands.

Anyone have any input ?

Regards
Mark

PS Please forgive me if this is not he correct newsgroup to post this. If its not could someone please tell me. Also is there a better newsgroup / blog web site for posting these stations thats has fairly active audience for talking to and discussing ?

I believe it's the "Firedrake" jammer used by the Chinese to jam broadcasts they don't particularly like, most likely Sound of Hope out of Taiwan.

Evening dxAce,

Thanks for your response. Cool a Jammer hmmmm, but if its jamming
shouldn't I have heard interference both stations ? this one is clear as
a bell and relaxing to listen to :)

BTW the Station just signed off with no ID at 1059 UTC

Keep listening. In my experience, the jammer often takes about a 5 minute break at the top of the hour.

In many reported instances, Sound of Hope is not heard on the frequency. Whether they are there or not the jammers continue on.

dxAce,

You're dead right, 1105utc started up again, however no station ID upon continuation :(

And just to clarify you last statement, "They continue to broadcast, regardless if the station they are trying to jam is actually active. "?

894. Re: Anyone have a Boston Accoustic Receptor Radio?

Newsgroup: rec.radio.shortwave

From: NOSPAM <Nospam@Nospam.net>
Message-ID: <12q72al6qdr2fb2@corp.supernews.com>
Source record: 102692

Hi, OP here.

I only called the service menu "hidden" because its not documented in the manual. There are quite a few adjustments that can be made in this menu, my only question is how I can save them once I make the changes so it lasts more than one session.

If you haven't found it on your own, turn the radio on. Press and hold the CLOCK button for about 3 seconds and then you get the menu. Its easiest to navigate with the remote, (especially the graphic equalizers) but you can use the knobs as well. To exit, press and hold the CLOCK button again when you are at the maine menu.

Now if you can figure out how to save these settings once you turn the machine off and back on, I'd appreciate you posting how here as I'm too stupid to figure that out.

-thanks!

I disagree. While you have to be careful when buying used equipment,
you can get a lot more radio for less money.

Why would someone sell a radio that is perfectly good? Lots of
reasons. Maybe they bought a newer more expensive receiver. Maybe they
got it at a great price at an estate sale and want to make a quick
profit (nothing wrong with that). Maybe they just have too many radios
and are cleaning out their shack. I've bought lots of good used stuff
from eBay without a problem. The main thing is to check the feedback
rating of the seller.

What I claim it says? I QUOTED to you from the King James Version also
known as the Authorized Version of the Bible. Perhaps you have your
own homo-approved version of the Bible which leaves that out! ??

Oh, I can imagine how one such "version" might read but then it would
not be the HOLY Bible but perhaps a mockery of the Bible.

Sounds good to me. I've never heard, or know of, a no-code ham doing anything worse than using incorrect "lingo". BFD. I've heard, and been the victim of extra class hams keying on top of me, ignoring me, etc, all because my call was after a certain date, and I might have been a no-code ham. I passed the code back in 73, that was enough for me.

I never heard about dropping the code requirement above 50mhz. Perhaps I missed something, fill me in. I do remember when the no-code Tech license came into being and the code requirement was dropped above 30mhz for that class license only. Is that what your referring to?

>>The purpose of proficiency testing was to insure you can send and
>>receive code with a minimum of effort.
>
> and yet it does not assure any ability to USE the mode at all

Sure it does. If you practice cw and the procedures used in it, the effort to operate is minimized as opposed to someone who knows little about operating procedures behind that particular mode let alone the code itself.

The one pitfall in cw testing that I think your pointing out, is that it was one sided. You only tested on what you could hear, not send. A good VE will conduct classes giving a turn at the key. Keep in mind that a person can send code much faster than they recieve it.

If your saying there is no guarantee an operator will use it, I agree. On the other hand just because you won't use it does not mean I will not.

>> Consequent to receiving your license, you
>>also took a commitment and seriously I might add, to assist and render
>>aid should you hear a distress call.
>
> as I can even in the unlikely event I receive a MorseCoded
> http://kb9rqz.blogspot.com/
>

Anyone, licensed or not who can operate radio equipment can assist in a distress call. However, if you don't know squat about cw, you don't know that code or procedures, how do you know how to respond to it? Answer, you can't. Thats the sad fact.

What will be next, to many controls on a radio? Mandate that radios are produced with only essential controls to make it easier?

Where does it end? I just don't see how eliminating cw made the hobby better. I think it makes us more dependent rather than self-reliant.

I can see the cw pileups during contest time now. TNC's don't have the same ability as the human ear, good filtering and technique.

OBSESSION: Radical Islam's War Against The West

http://www.obsessionthemovie.com

What The West Needs To Know

http://www.WhatTheWestNeedsToKnow.com

"People like Brigitte are plenty in the world,---"

Brigitte Gabriel is an expert on the Middle East conflict and lectures nationally and internationally on the subject. She's the former news anchor of World News for Middle East Television and the founder of AmericanCongressforTruth.com .

Universities, for those of us who lecture on campuses, are the battleground for the heart and soul of the next generation of leaders. It is the battleground where we must fight to win back the opinion and allegiance of American college students. This is made harder when Islamists in both the college and local communities try to intimidate us and deny our free speech on campuses in some of the least likely places. We have grown to expect these things on the major East and West Coast "elite" university campuses that harbor radical professors and anarchist student and radical Muslim community activities. But not in the heartland where I spoke last week at the University of Memphis. What was shocking was that it occurred in the South, in "Bubbaland" as my friends from the region call it. I was invited to give a lecture sponsored by Professor David Patterson of the Judaic Studies Program. When news about my appearance spread, the Muslim community both on and off campus launched a full-scale campaign to stop my lecture. They demanded that Dr. Patterson cancel my speech. E-mails flooded the University of Memphis administration and Dr. Patterson from Muslim students on campus and Muslims in the community and mosques.

Here are some of their comments:
"People like Brigitte are plenty in the world, they are the true enemies of Islam. And despite their rubbish talks, the truth about Islam is spreading like a wildfire across Americas and across the globe (All Praise to Allah)."

"Dr. Patterson, hosting of this lady is orders of magnitude worse than hosting of the Imperial Wizard of the Ku Klux Klan."

"Do you honestly think the scheduled lecture will serve any useful purpose other than inflaming the Muslims, insulting them and spilling poison in the community?"

It is interesting to see the reaction of the Muslim community to someone with Muslim shrapnel in her body who speaks against butchering innocent people in the name of Allah. If they would put the same energy into condemning the radical element within Islam and join us in saying that slaughtering people in the name of Allah is murder not jihad maybe we wouldn't question their loyalty as American citizens. Dr. Patterson refused to bow to their intimidation and insisted on going on with the scheduled speech.

By the time I showed up at the amphitheater-style lecture hall on campus, police officers were already standing at each entrance. Nearly half of the hall was filled with Muslims with their leaders dressed Osama bin Laden style sitting in the front two rows at eye level making "their point," that I wasn't going to get away with speaking freely. Just as the program was about to begin, a Muslim student walked to the front and asked the crowd to raise their hands if they believed that this lecture was "undemocratic." They complained that I would be taking questions on cards instead of allowing them to ask them publicly. Experienced in these settings, I knew they would make speeches, spew anti-American and -Israeli sentiments, and create chaos in the room during the Q&A. I decided that they were not going to do that. The provocative Muslim student behavior before I even began my lecture proved my foresight. Dr. Patterson explained that taking questions from cards distributed to the audience was normal protocol at university speaking events like mine.

Patterson tried to calm the unruly crowd, but nothing was working. Fed up, I went straight to the podium and ordered everyone to sit. I told them, this is my lecture and I run the show. If they didn't like the way I conducted my lecture and my questions they could leave the room, now. Shocked at my behavior and authority they shut-up. The non-Muslim members of the audience applauded. I finished, asked Professor Patterson to make introductory remarks and returned to my seat. Dr. Patterson introduced me by telling the audience what an eye-opener this lecture had become because of the reaction. He stated that he never realized that here in Memphis a speaker should be threatened for his/her safety just to speak on a college campus. He introduced me and I delivered my speech with police officers on both sides as well as about eight others in the lecture hall and around the building. Unknown to me, a Muslim student attending the University of Memphis was arrested weeks prior to my lecture for, among other things, possession of DVDs on pilot training and charts on the layout of the Memphis airport. They found links on his computer to sites associated with a radical Sunni Muslim organization in Iraq, and searches for information on how guns and bombs can be smuggled past airport security. After witnessing the Muslim reaction to my lecture and what happened few weeks ago at the University of North Carolina at Chapel Hill, when an Iranian Muslim student drove into for Allah's sake innocent students gathering on university grounds, the Memphis police were not going to take any chances.

It is a sad state of affairs when any speaker on any American University campus has to be surrounded by police officers to protect their freedom of speech and person from intimidation and menace. America is the country where free speech is protected under our Constitution. Who would have expected that in the home of the Beale Street Blues, W.C. Handy and Elvis, I would be confronted by Muslims trying to muzzle my free speech, and perhaps all of us? At the end of the lecture, the Muslims immediately in front swarmed over me questioning and intimidating. Police officers quickly moved in and pulled me out straight to the police cars as the enraged Muslims started shouting. Based on what happened to me in Memphis, I think its time for Americans to wake up as to what is occurring within their very midst. It is time to be energized and empowered to stand up and fight to take back our universities. It's incidents like this that spur speakers like me to defend our civilization and everything it stands for.

>that code or procedures, how do you know how to respond to it? Answer,
>you can't. Thats the sad fact.

one the odds of receiving a distress call on CW but knowing very
little about CW I know how to renocize SOS if my pc can't read the
Morse becuase condictions are too bad I can simply call arround to
someone that DOES and get them on freq and will have therefore assited
them

it is a fact that I don't need to understand more Morse than SOS (and
I would respond the same if OSO were sent

Morse Testing is therfore not needed to assit in answering Morsecoded
distress call Morse code skill certainly would but testing neither
assures nor does the lack of testing prevent the development of said
skill

Too bad SLBC refuses to ever respond to a QSL request. I have written them with reception information nine-ways-to-Sunday in the last few years (airmail/e-mail), and they won't even hit the return key on the e-mails to tell me they are alive, let alone whether I heard them or did NOT hear them. They are either totally lazy, utterly disinterested, or just plain dead.

Hold down the CLOCK button until the menu appears.

The rest of his posting will make sense once you see the contents.

918. Banned in Pakistan

Newsgroup: rec.radio.shortwave
Date: 2007-01-09 19:04:02 UTC
From: "Guerite." <aim@their.heads>
Message-ID: <12q7pob55scpae3@corp.supernews.com>
Source record: 102922

The government of Pakistan has banned my book The Truth About Muhammad, confiscating all copies and translations. Why? Because it contains "objectionable material" about Muhammad, the prophet of Islam. Said Shahid Ahmed, counselor of community affairs at the Pakistani Embassy in Washington: "The book is very, very damaging - let me tell you."

Objectionable material? Damaging? I confess it: they're right. There is plenty of objectionable material in this book. Here's a small sampling:

1. The Truth About Muhammad details the triple choice that Muhammad directed his followers to offer to non-Muslims: conversion to Islam, subjugation without equality of rights with Muslims under the rule of Islamic law, or war. Did I fabricate this? No, it can be found in, among many other places, Sahih Muslim, a collection of hadith - traditions of Muhammad and the early Muslims - that Muslims generally consider reliable. In it, Muhammad says:

Fight in the name of Allah and in the way of Allah. Fight against those who disbelieve in Allah..When you meet your enemies who are polytheists, invite them to three courses of action. If they respond to any one of these, you also accept it and withold yourself from doing them any harm. Invite them to (accept) Islam; if they respond to you, accept it from them and desist from fighting against them..If they refuse to accept Islam, demand from them the Jizya [a special tax levied on non-Muslims]. If they agree to pay, accept it from them and hold off your hands. If they refuse to pay the tax, seek Allah 's help and fight them. (Sahih Muslim 4294)

Is Sahih Muslim banned in Pakistan? Of course not.

2. In the book, I discuss how Muhammad's earlier biographer, Ibn Ishaq, explains the contexts of various verses of the Qur'an by saying that Muhammad received revelations about warfare in three stages: first, tolerance; then, defensive warfare; and finally, offensive warfare in order to convert the unbelievers to Islam or make them pay the jizya (see Qur'an 9:29). Qur'anic commentaries (tafasir) by Ibn Kathir, Ibn Juzayy, As-Suyuti and others also emphasize that the ninth chapter of the Qur'an, in which this call to offensive warfare appears, abrogates every peace treaty in the Qur'an.

I didn't just dig into old books to find this. In the modern age, this idea of stages of development in the Qur'an's teaching on jihad, culminating in offensive warfare to establish the hegemony of Islamic law, has been affirmed by the jihadist theorists Sayyid Qutb and Syed Abul Ala Maududi, as well as the Pakistani Brigadier S. K. Malik (author of The Qur'anic Concept of War), Saudi Chief Justice Sheikh Abdullah bin Muhammad bin Humaid (in his "Jihad in the Qur'an and Sunnah"), and others. It is, of course, an assertion of no little concern to non-Muslims, since it encapsulates a

doctrine of warfare against non-Muslims and their ultimate subjugation under Sharia rules, with all that implies, and is being used by jihadists today in the Islamic world to justify their actions and make new recruits.

Are the works of Ibn Kathir, Ibn Juzayy, As-Suyuti, Qutb, Maududi, Malik or Humaid banned in Pakistan? Of course not.

3. Also in The Truth About Muhammad I discuss Muhammad's marriage to little Aisha, which is specifically addressed in the hadith collection Sahih Bukhari (generally considered by Muslims to be the most reliable such collection). According to several traditions recorded by Bukhari, "the Prophet wrote the (marriage contract) with 'Aisha while she was six years old and consummated his marriage with her while she was nine years old and she remained with him for nine years (i.e. till his death)" (Bukhari 7.62.88; see also 7.62.65; 7.62.64; 5.58.236; 5.58.234).

It is quite obvious that many Muslims take very seriously and act upon the material on which I depended to write the book. Imitating the Prophet of Islam, many Muslims even in modern times have taken child brides. In some places this even has the blessing of the law: article 1041 of the Civil Code of the Islamic Republic of Iran states that girls can be engaged before the age of nine, and married at nine: "Marriage before puberty (nine full lunar years for girls) is prohibited. Marriage contracted before reaching puberty with the permission of the guardian is valid provided that the interests of the ward are duly observed."[i]

The Ayatollah Khomeini himself married a ten-year-old girl when he was twenty-eight.[ii] Khomeini called marriage to a prepubescent girl "a divine blessing," and advised the faithful: "Do your best to ensure that your daughters do not see their first blood in your house."[iii]

Time magazine reported in 2001:

In Iran the legal age for marriage is nine for girls, fourteen for boys. The law has occasionally been exploited by pedophiles, who marry poor young girls from the provinces, use and then abandon them. In 2000 the Iranian Parliament voted to raise the minimum age for girls to fourteen, but this year, a legislative oversight body dominated by traditional clerics vetoed the move. An attempt by conservatives to abolish Yemen's legal minimum age of fifteen for girls failed, but local experts say it is rarely enforced anyway. (The onset of puberty is considered an appropriate time for a marriage to be consummated.)[iv]

The United Nations Children's Fund (UNICEF) reports that over half of the girls in Afghanistan and Bangladesh are married before they reach the age of eighteen.[v] In early 2002, researchers in refugee camps in Afghanistan and Pakistan found half the girls married by age thirteen. In an Afghan refugee camp, more than two out of three second-grade girls were either married or engaged, and virtually all the girls who were beyond second grade were already married. One ten-year-old was engaged to a man of sixty.[vi]

This is the price that women have paid throughout Islamic history, and continue to pay, for Muhammad's status as "an excellent example of conduct"

(Qur'an 33:21).

Of course, in this as with the other instances I have adduced, other Islamic authorities differ. Some claim that in repeating the traditions from Bukhari, I am perpetuating misunderstandings - despite the manifest fact that these "misunderstandings" are quite widespread in the Islamic world. If they are indeed misunderstandings, the problem lies with Sahih Bukhari, which is very ancient and essentially canonical, not with my book, which has been available for less than three months and will be forgotten before too long.

But is Sahih Bukhari banned in Pakistan? Of course not.

4. Finally, in my book I explain why it is today virtually impossible to prove rape in lands that follow the dictates of the Sharia. False adultery accusations against Aisha led ultimately to the requirement that four male Muslim witnesses must be produced in order to establish a crime of adultery or related indiscretions. In cases of sexual misbehavior, four male witnesses are required to establish the deed - in accord with a revelation that came to Muhammad to exonerate his youthful wife (Qur'an 24:13).[vii] This requirement allows unscrupulous men to commit rape with impunity: as long as they deny the charge and there are no witnesses, they get off scot-free, because the victim's account is inadmissible. Even worse, if a woman accuses a man of rape, she may end up incriminating herself. If the required male witnesses can't be found, the victim's charge of rape becomes an admission of adultery.

That accounts for the grim fact that as many as seventy-five percent of the women in prison in Pakistan are, in fact, behind bars for the crime of being a victim of rape.[viii] Several high-profile cases in Nigeria in recent years have also revolved around rape accusations being turned around by Islamic authorities into charges of fornication, resulting in death sentences that were only modified after international pressure.[ix]

Because they're rooted in Qur'anic dictates, such abuses are extraordinarily resistant to criticism and reform. Witness the recent situation in Pakistan, the same country where my book has just been banned. The new Women's Protection Act has reclassified the crime of rape so that it can be prosecuted according to modern standards of evidence and testimony, without relying on the four male witnesses required by the Qur'an. But Muslim hardliners have staged protests against the new law, calling it "un-Islamic, immoral and unconstitutional." And they have a case, based on Qur'an 24:13 and the story of Aisha's exoneration.

This is just one indication that what I wrote in The Truth About Muhammad about Muhammad is generally what Muslims believe about Muhammad - even in Pakistan. Since I based the book entirely on Islamic sources, the objection that Pakistani authorities have to it cannot reasonably be based on what I report about Muhammad, but only on the fact that I hold him to a moral standard different from the one he delineated for himself, and do not consider him to be an "excellent example of conduct." But in a society that is not pathologically insecure, this ought to be not an occasion for banning

and confiscation, but for free and open debate. After all, the reform of Islam that is so needed today - in order to mitigate the elements of it that are giving rise to violence and extremism -- cannot possibly begin without acknowledgment of the fact that there are aspects of Islam that need reform. But the banning of The Truth About Muhammad in Pakistan is yet another indication that such reform, despite the immense hopes placed upon it by so many in the West, is not on the horizon.

A fifty year old man is ACCUSED of having "underage" (by whose standards...) photos on his 'puter. Could've also been easily hacked and planted there.

Yet a talk show host pushing seventy, who leaves the country in a hurry after the bizarre death of his wife, is porking a twenty something chick young enough to be his grand-daughter, and that's OK.

A 50 year old nobody from West Virginia questions the Holocaust.

Yet an 80 something ex-President (Carter) gives his endorsement of Iran's Holocaust Denial Convention, and he is haled as a hero.

This country is phucked up and upside down!

So, it appears from what you say that the Rabbis are the ones who tell you that the sin of sodomy is not a sin at all but is all right. Is that correct?

Oh, they may not come right out and say it as I just did, but you say it is they who explain away sodomy as the reason for God destroying Sodom and Gomorrah and other cities of the plains. "It was the sin of breaking the laws of hospitality!" Right?

And some wonder why Jewish controlled Hollywood is so vial! You said it. Their Rabbis have explained away sodomy! :-)

Now, I'll be called an anti-semite for explaining what you say the Rabbis have explained! :-)

nope they say no such Indeed rabbi differ in saying wether anal sex is
a sin but they generaly agree that th e Destruction os Of Sodom had
nothering to do with anal sex
>

Sodmy was simply apiled by stupid christain who did not bother to read
to story of Sodom and Gamorah

the rabiis are not responsble for christains being too stupid to read
the bible

at the time God had laid NO prohibition against anal sex or man to man
sex that is done nowher in the Before the period of exodus roughly 5
hunderd years later

the sodomites raped 2 angel sent on a fact finding mission and God was
pissed by that and destroyed the city in turn

Source record: 102937

Wrong. If you took the test and passed, you have proven your ability to operate. Otherwise what's the point of testing?. If you ever took a cw course or test you would understand the comment.

I was extending a personal opinion before where I commented on code courses and the testing procedures. There's always room for improvement.

I don't concede to the fact that just because YOU believe testing does nothing to enhance ones ability to operate, that it's true.

Your response about distress calls proves the point I have been making. You admit to not having knowledge of cw beyond the ability to decipher only two letters, S and O.

You can distinguish 2 of 26 letters and learning anymore according to you is to difficult. I think you can learn more, you just won't make an effort.

BTW, not all distress calls start out as SOS like in the movies. How would you know you were hearing one, by looking at a computer screen all the time?

To determine the effectiveness of a particular band you go looking for a beacon signal. How do you know if your tuned on the right station if you can't understand cw?

You admit the lack of cw knowledge would make it a necessity for you to "call around" locating someone who could help if you heard a distress call. If cw is not required anymore to obtain a license, locating someone who does know cw might take a little while.

You want the opportunity to operate below 30 mhz without a cw test. Then you shouldn't be allowed in the freq ranges allocated to cw until you are endorsed for it. I certainly wouldn't desire less than a fully qualified pilot in the cockpit or doctor in the operating room.

With your way of thinking, testing should allow full privileges and it shouldn't have to be difficult so you can pass it without studying. That is how I define the degradation of ham licensing.

You want to take the easy way out and I can't stop you, just don't expect any pats on the back from those of us who had to work for what we got. At least we can appreciate what we got. Here goes the neighborhood!

How about that... I sent him an email pointing that out... here is a copy/past of the response:

If all your going to do is complain, then don't bother contacting me. This is for questions, not random people throwing around complaints. Buy a saber 3 somewhere else then, not from me. By the way I don't calculate shipping, it's done on the auction calculator. Don't bother bidding on any of my items...ever.
Thanks

Now I went back after I saw your post and it's ~13.00. At least he changed it.

Good catch. They're not coming in now, 9:32 p.m. EST, 0232 UTC, in northern VA, DX-398 with the built-in whip. I'll give them another try later.

I've heard RFI on the LW too, but I was in Ireland at the time. I was hitchhiking, and the driver was listening to it on the car radio.

Art and George both sometimes have good guests. Astronomers,
physicists, engineers, real scientists. It's when they have on the UFO
abductee believers, bigfoot watchers, ghostbusters, that Hoagland
whackjob, etc., that I turn it off quickly.

If the ticking is very regular (like a clock), it's probably coming from a digital device in his home or a close neighbor. First thing to do is turn off the main circuit breaker in the house to remove power from all possible sources for the ticking. Operate the radio on batteries and listen for the tick. If it's gone, turn the main breaker back on. Now turn off each circuit breaker in the box one at a time, to isolate which circuit has the device which is making the ticking. When you find the right circuit, start disconnecting all the devices on that line one at a time. Eventually you'll track it down. I had a similar problem and traced it to a cordless drill battery charger. It only made the sound after the battery was fully charged.
If the noise didn't go away when the main breaker was off, take the radio outside and walk around the neighborhood to see where the ticking is strongest. You might have to question a neighbor or two after you find the area where the ticking is loudest.

In his latest post, Guerite claims to have written a book,"The Truth About Mohammed". He was previously exposed as a fraud and a liar when he claimed to be an author of another man's work. The book in question was written by Robert Spencer and Guerite ai'nt no Robert Spencer. Besides clogging up the website with what appears to be copywrite violation, the text has nothing to do with shortwave radio. Why he continues to post his boring material on this website, using a variety of names, beats me. I would not answer his posts as these unstable characters tend to be generous with trojans and worms.

I have noticed increased activity by homosexuals on this website
trolling for new partners. Homosexuality used to be "the sin that would
not speak its name" -now they won't shut up about it.
Without any judgement, I offer the following text from Romans !:26,27 .
"Because of this, God gave them over to shameful lusts. Even their
women exchanged natural relationships for unnatural ones. 27 In the
same way the men also abandoned natural relations with women and were
inflamed with lust for one another. Men commited indecent acts with
other men, and received in themselves the due penalty for their
perversion."
I thought that another opinion deserved a spot. I hope rec.radio.
shortwave doesn't become a fishing ground.

++

I resent the hell out of your post! It is just one more example of homophobia that is rampant in the USA and this newsgroup in particular. I am NOT trolling for new partners because I am happily married. Granted my husband has not been thrilled with me posting on the internet but that is because it has stressed me out NOT because he is afraid I will cheat on him.

I have an obsessive compulsion disorder that makes me eat nonstop when I become stressed and I've gained 22 lbs. in just over one month. This is due to the vicious attacks I've received from the haters in this group. Hope that makes you feel better HATER!!!

I resent the hell out of your post! It is just one more example of homophobia that is rampant in the USA and this newsgroup in particular. I am NOT trolling for new partners because I am happily married. Granted my husband has not been thrilled with me posting on the internet but that is because it has stressed me out NOT because he is afraid I will cheat on him.

I have an obsessive compulsion disorder that makes me eat nonstop when I become stressed and I've gained 22 lbs. in just over one month. This is due to the vicious attacks I've received from the haters in this group. Hope that makes you feel better HATER!!!

963. Kaito KA2100 release dates

Newsgroup: rec.radio.shortwave
Date: 2007-01-10 08:00:25 UTC
From: weatherall <weatherall.2k6txu@news.radiobanter.com>
Message-ID: <weatherall.2k6txu@news.radiobanter.com>
Source record: 102967

I wanted to clarify something from an earlier thread about the Kaito KA2100 release dates. Universal-Radio has a page for the KA2100 that says "This new model is expected 02/20/07." As far as anyone knows, it is the same radio that Kaito USA is selling, and also the same radio that Redsun makes (except for the Kaito branding). The 02/20/07 date doesn't mean that there will be a brand new revision available.

Don't know how loony it is. It's got Lou Dobbs up in a snit, as well as
several folk on Faux News. It's very real, though the government is keeping
it really low key. Even a US gov. website about it.
```

And how do I prove that over the Internet, bring my paddles closer to the
keyboard?

>
> the test is Not realistic of anytype of real messge nor are the
> condiction anything like the real wrld
>
> there is no point in testing

How did they send you code during the test, beating the side of a wash
basin with a hammer? When I took the test it was very much like real world.

You had to decode both call signs, the signal report, qth, names and so on.
How is that not real world? Because it's not real world according to you
the code test should not be administered? I think it's more an inability on
your behalf considering thousands have passed the test already and at
higher speeds I might add!

>>
>>I don't concede to the fact that just because YOU believe testing does
>>nothing to enhance ones ability to operate, that it's true.
>
> wether you conceed to facts or not is your affair

Because YOU said it does not enhance ones ability to operate, it's a fact?
Interesting response.Not my affair? How do you like that! Let me rephrase
myself. I respect your opinions but I don't have to agree with them and
believe me, I don't!

You must be a real hoot on the radio. If someone doesn't agree with you do
you tell them what their talking about is none of their business? HA! HA!
That's a good one.

>>
>>Your response about distress calls proves the point I have been

>>making. You admit to not having knowledge of cw beyond the ability to
>>decipher only two letters, S and O.
>
> no I did not admit to that you reading skil is obviously lacking

My reading skills are just fine. You said and I quote:

> one the odds of receiving a distress call on CW but knowing very
> little about CW I know how to renocize SOS if my pc can't read the
> Morse becuase condictions are too bad I can simply call arround to
> someone that DOES and get them on freq and will have therefore assited
> them

-end quote-

Even if you couldn't spell it, you just said you could RECOGNIZE an SOS call even if your pc can't. Beyond that you knew little about cw. Which is it, you know it or don't know it?

I was trying to show you that you know more than you give yourself credit for when I said:

>>You can distinguish 2 of 26 letters and learning anymore according to
>>you is to difficult. I think you can learn more, you just won't make
>>an effort.

Now we're back to . . .

> one you are saying becuase I stated I can decode so that that is all I
> can do that is result of your poor reading skil

Have you ever tried to read "how" you write here? I'm pulling double duty on this thread. If you can do better than what I interpreted you to be saying, my apologies.

>
> two I spent 5 years trying and failing to pass a novice code in the
> 70's. I am quite certain I have spent a whole lot more effort than
> you, but I don't deal well with letter in real time let alone code

Five years is a long time but don't go running off with the title yet. I said before I have been associated with this hobby since the 60's. I didn't get licensed until the early 90's because of cw. Your not the only one with a problem regarding cw.

It wasn't until I came across material offered by Gordon West that I was able to learn code. Radio Shack stores use to sell his material. Maybe they still do.

I remember the old Heathkit records. This is an "A" dit dah, this is a "B" dah dit dit dit Boring as all hell!

If Gordon taught brain surgery I probably could have learned it in a day based on the way he teaches!

This is why I said before, you probably havn't come across a course or instructor that caters to your needs. If you never heard of this guy go check out his tapes. I use to listen while I drove all day. The process he uses is different from other forms of instruction.

>>You admit the lack of cw knowledge would make it a necessity for you
>>to "call around" locating someone who could help if you heard a
>>distress call. If cw is not required anymore to obtain a license,
>>locating someone who does know cw might take a little while.
>
> yea so what?

Because you took the easier way out to get licensed so you became a less effective operator as compared to those who learned the code. Instead of offering assistance you add to the problem of giving assistance.

>>
>>You want the opportunity to operate below 30 mhz without a cw test.
>>Then you shouldn't be allowed in the freq ranges allocated to cw until
>>you are endorsed for it. I certainly wouldn't desire less than a fully
>>qualified pilot in the cockpit or doctor in the operating room.
>
> well when was the last a Cw Morse signal was involed in life saving?

The last one I heard was during Hurricane Katrina.

>>
>>With your way of thinking, testing should allow full privileges and it
>>shouldn't have to be difficult so you can pass it without studying.
>
>
> with your distortions of my words and postion you are right in reality
> however you "logic" is cracked.

If your going to whine and cry like you have been, then my opinion stands. If there was something tangible to your complaint my answer might be different. Why is it your allowed to state opinions and express view point but I'm not?

>
> the test should relate to real world of radio in wihch Morse Code is
> very small part

What is your definition of "real world radio?" How do you catagorize morse code as being a very small part of amateur radio?" By the amount of bandwidth allocated? The amount of active cw users? Ever hear of CONTEST TIME? The amount of cw users grows exponentially to the decline of phone users over the same period.

Your remark about cw being insignificant because it's a very small part of ham radio is very insensitive considering the company you plan on keeping. And you say I degrade the hobby?

> you degrade radio license and the service by your ldistortion or
> inabilty to read and coment accurately on twhat you read if you
> message handling skills are a poor as the skills you display HERE you
> are not fit to operate your radio in any mode

Here we go. Let's haul out the real dirty mud and sling it around to distort what the topic is really about. The idea behind this thread was to discuss why cw is or is not valid for license testing purposes.

Trying to read and understand exactly what you type is no easy task. Don't tell me you don't have a problem with spelling much less organizing your thoughts. Trying to muddle through what you post is exhausting work.

You don't lack creativity, that's for sure. One minute you can't operate cw, then you back-peddle and say that you can. First the test it's to hard for you, then you blame the examiners for not administering it correctly. Now your telling me if I don't agree with you it's because I can't read.

What you are very good at is blaming everyone else for your own failures. What you really need to do is hold yourself up to a higher standard.

> I don't expect anything form the likes you except your hate and
> further abuse as I have suffered over the from BAD hams like yourself

How did I abuse you in this thread and when did I say I hate you? Do you have this preconceived notion that people are out to get you.

If I said something out of line that really hurt your feelings I apologize but beyond that you can't blame the system for your failures.

I learned a long time ago that when someone invents excuses for failures it's time to say auf Wiedersehen!

I'm going to end my contributions to this thread by saying best of luck to you, you'll need it and by quoting myself:

>>You want to take the easy way out and I can't stop you, just don't
>>expect any pats on the back from those of us who had to work for what
>>we got.

>>Here goes the neighborhood!

73 from a BAD BAD ham . . . sk!

"''
''''''''''''''''''''''''''''''''

You have gone off half-cocked. I live in Canada where homosexuals have
by law all the rights they want and hate speech is illegal. You are not
the only homosexual on this website and while you may not be trolling
for new partners, others are. When I quote God's word, I am just the
messenger: if you have any dispute about the text, take it up with God.

I note that you made a post on Dec.18 and 4 posts recently. For
some reason you have a lot of double posts which only count as one. If
you have gained 22 lbs in just over a month, you have only one post on
Dec 18 and your weight gain would have started well before that (say
Dec 1). Maybe the weight gain is due to Xmas. I quoted Seinfeld and
stated that I was not being judgemental but I feel that if the
homosexual community is going to go on and on about their lifestyle,
others have a right to express their opinion. I just went a bit further
and expressed God's.
I also note that the misuse of the apostrophe drives you nuts. I
would point out that in your phrase "thrilled with me posting" the
gerund always takes the possesive case and should read
"thrilled with my posting". We may not be perfect but neither are you.

967. Re: (OT) "Not That There's Anything Wrong With That" : Seinfeld

We RESENT the posts that you leave too... If you want to be a FAT
homosexual fruit pie thats
your business. However, I don't POST to this group or any other group MY
sexual preferrence
I limit my posts to the subject matter (usually) of the group I'm in. I
also don't participate in
Hetrosexual parades, on city streets wearing outlandish underware to show
the world what my
sexual preferrence's are either.

The only HATE shown here, is the resentment of having to put up with your
soapbox posts,
that are off topic.

So if you feel like eating a few bags of donuts, a couple fruit pies, and
some foot long hot dogs,
to ease your 'stress' ..... have at it.

I recieved Radio Pakistan from 1100 GMT on 15100 (very good reception i
was surprised but 5 minute broadcast?!)

VOIRI from 1030 GMT on 17660 (Pretty good reception i
listen to it for awhile)

BBC caribbean Service from 1100GMT on 5875 surprising to say
the least esp when im in Southern Australian and pretty good reception too.
All india radio from 1000GMT on 17800 pretty good reception
with minimal interference.
Radio New Zealand International from 1100 GMT on 13840 for a
service that is pretty close to Australia i seem to always get poor
reception :/

Im going off soon just wanted to write an reception report and to get a
schedule for one station www.primetimeshortwave.com is wonderful but has
a few flaws.

Oh and Voice of Korea from 1000 GMT on 6185 usual sub-standard reception
cos of there obsession with jamming other stations.I should record it
one night and listen to it later.

How long ago did you take your code test?

When I took mine (1982) we had 'code groups', just groups of letters and
numbers with no meaning at all. I'm not sure real words would have been any
easier for me, as the only way I could learn it at all was to write a
program for my Commodore 64 that would send Morse to me when I hit a key (or
group of keys, until I ran out of keyboard buffer).

own a pair of Midland LXT300 GMRS radios, the package says it has an average range of 10 miles under good conditions. I have heard that the

range of GMRS radios is often exaggerated, can anybody shead any light on this? Is this also true for my radio set? thx in advance

976. The "Green" Antenna for AM/MW Radio Reception plus Shortwave Too !

Newsgroup: rec.radio.shortwave
Date: 2007-01-10 13:21:19 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1168435277.661723.177910@i39g2000hsf.googlegroups.com>
Source record: 102975

The "Green" Antenna for AM/MW Radio Reception plus Shortwave Too !

MH - You Got It Right ! :o) ~ RHF

'The so called "Green" Antenna is a Solar Powered Un-Tuned
Ferrite Rod Active Antenna for AM Radio Listening.

An with my Cambridge Soundworks CD740 Radio which really
was a very poor AM Radio -very week AM Radio reception.

The "Green" Antenna made it Come-A-Live with AM/MW Radio
across the Dial (AM Band).

The Cambridge Soundworks CD740 Radio -COMES ALIVE-
With The "Green" Antenna
http://www.google.com/group/rec.radio.shortwave/msg/b18766491f8ef898

May not 'help' the Eton E1 Radio on AM/MW as much as
it did the DEAF the Cambridge Soundworks CD740 Radio
-but- it does allow you to locate the AM/MW Antenna
next-to or just-out-side a Window and position it for
your best AM/MW Reception. And for some AM/MW Radio
Owners and Listeners : This may mean Hearing What You
Want To Hear On The AM/MW Band -or- Turning-on-the-TV !

QUESTION : WHAT IS THE "GREEN" ANTENNA ?
The TG35 is a Indoor AM {Medium Wave} Shortwave and
Longwave Active Antenna.
GREEN => http://cgi.ebay.com/_W0QQitemZ140065562744
The TG35 Active Antenna can be used for AM {Medium Wave}
Broadcasting Band reception. The TG35 Active Antenna
has the frequency coverage from : 30 kHz to 30 MKHz
using two Plug-In Actenna Elements :
* Ferrite Rod Element for the AM {Medium Wave} Band
Frequency Coverage : 520 kHz to 1710 kHz plus Longwave
* Short Whip Antenna Element for the Shortwave Band
Frequency Coverage : 3.0 MHz to 30.0 MHz

QUESTION : WHAT MAKES IT "GREEN" ?
The TG35 Active Antenna has a 500mAh Ni-MH 'rechargeable'
Battery built into the Antenna, this can be 'recharged'
by the Solar Cell that is also built into the Antenna.
GREEN => http://cgi.ebay.com/_W0QQitemZ140065562744
- - - This makes the TG35 Active Antenna a "Green" Product.
Plus - The TG35 Active Antenna can be recharge the Ni-MH
'rechargeable' Battery via the USB Port Connection of a PC.

ANTENNA SIGNAL OUTPUT ?
The TG35 Active Antenna uses a 1/8" (3.5mm) Stereo Plug
as it's Out-Put-Connection.

NOTE - THE TG35 ACTIVE ANTENNA IS AVAILABLE ON EBAY.

Let me put it this way.

I own a pair of "14 Mile" GMRS radios. I can get, on a GOOD day, about half a mile with them. This is in regular urban/suburban terrain. You may get better range if you're on a hilltop, talking to someone line-of-sight on another hilltop, assuming no interference from other GMRS users.. which is getting harder to get around all the time, since those 'privacy codes' are not private at all, they're only tone squelch, and you can hear them just fine on any other radio on the same channel that isn't using them. All they do is keep you from hearing other people's radios. They don't keep those other radios from interfering with the one you're trying to hear.

I believe the 10 mile range is, if you are using them over water (lake or ocean, etc),
under ideal atmospheric conditions (no storms, snow etc) using new batterys fully charged.

For One and All,

ABOUT - External "Roof-Top" FM Antennas for Better
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11932
FM Radio {Stereo-and-Mono} Listening both Local and DX

For many people an all-around general VHF/UHF/FM TV Antenna
that has 8-12 Elements will do 'ok' as an FM Radio Antenna.
FM ANTENNA => http://www.fanfare.com/antenna.html
FM ANTENNA => http://www.winegard.com/offair/fm.htm
FM ANTENNA => http://www.starkelectronic.com/ac.htm
FM ANTENNA => http://www.starkelectronic.com/winegard.htm
RADIO-SHACK TV ANTENNAS => http://tinyurl.com/varfy

Urban {Local} Area FM Radio Listeners
For Urban Areas with FM Radio Stations in all directions
the AntennaCraft # FMSS "Turnstile" type of FM Antenna
will pick-up most of what is out-there to be heard within a
25 Mile radus.
FM ANTENNA => http://www.starkelectronic.com/ac.htm

Sub-Urban {Distant} Area FM Radio Listeners
The AntennaCraft # FM-6 Fringe Six (6) Element Antenna
will work 'ok' for most people within a 50 Mile radus.
FM ANTENNA => http://www.starkelectronic.com/acantena.htm#FM

TV & FM ROOF-TOP ANTENNAS
* In-the-Air -and- Out-of-the-Noise *
The Key-Thing with these Roof-Top TV & FM Antennas is that
they are "Up-There" On-the-Roof & Above-and-Out-of-the-House :
* Without anything in the way of the TV-FM Radio Signal.
* Plus Out-Side the RFI-EMF Noise Envelope of the House.

the mast, The Mast. THE MAST !
A grounded 5-10 Foot Metal Mast is a Key-Part of
making a Roof-Top TV and FM Antenna work right
and produce the best results. The Mast puts the
Antenna "Up-There" : In-the-Air -and- Out-of-the-Noise

Thanks for this. Prior to that, one must go back to 2002. Not that
everyone on earth posts their QSL info at this site, of course, but
somebody else *must* have tried to reach them over the course of the
last half decade.

Communist Chinese online commentators recruited by various Communist state agencies are responsible for guiding Internet users toward the authority-endorsed opinions on important issues. They are referred to as the "Internet political workers," and are paid half a yuan (US$0.08) per message they write. Internet users refer to these commentators-in-disguise as "fifty-cents."

Communist Chinese online commentators recruited by various Communist state agencies are responsible for guiding Internet users toward the authority-endorsed opinions on important issues. They are referred to as the "Internet political workers," and are paid half a yuan (US$0.08) per message they write. Internet users refer to these commentators-in-disguise as "fifty-cents."

Al, if gays aren't bothering you personally, why do you care? What
business is it of yours, really? Maybe they are sinning, maybe not -
but it isn't your axe to grind or your cross to bear. It's between God
and them. And remember, you aren't the only one who thinks his
religion is the one to end all religions, and you aren't the only one
to think he has a lock on Biblical interpretation.

Hi Guys,

OK - So most of us Guys {Old Farts} here are most likely into
checking all the features and attributes of every new Gadget
that comes along . . .

Here is a Bells-and-Whistles Website for the Ladies

It is called "Shiny Shiny" [Dot] TV
[http://www.shinyshiny.tv/]

This is designed as a "New Gadget" WebSite For-the-Ladies.

SHINY SHINY => http://www.shinyshiny.tv/gadgets/

Theme : "A Girls Guide to Gadgets !"
- - - and Yes "Pink" is the Primary Color.

Sub-Title : "A Girls Guide to the CES !"
- - - CES : The 10 Latest Videos
[http://www.shinyshiny.tv/]

About : "Shiny Media"
http://www.shinymedia.com/

Hey Wait-a-Minute !
They also do "Tech Digest" for us Guys {Boy's Toys}
TECH DIGEST => http://www.techdigest.tv/
The UK and Europe's premier site for News, Reviews and
Opinion on Consumer Electronics and Gadgets and
TECH REVIEWS => http://www.techreviews.tv/
The Latest Gadgets, Consumer Electronics Goodies and
Load's More Tested

that's all folks and folkets ~ RHF

Good - maybe, we can make you gain another 25 pounds ! So, your OCD is responsible for you trolling this board, looking for some more preverts ? BTW, you post way to much personal information, pervert. So, are you bisexual, looking for some carpet-munching ? If you were happily married, you wouldn't be here, trolling for fellow perverts. There must be a gay/lesbian SWL group, but get the Hell out of here, pervert ! And yes, this makes me fell great ! God, your kind makes me sick !

Telemon - I am having a terrible problem here. some posts arrive only two days after they were sent. Others get dropped completely and I never see them.
I am able to monitor this a bit by going to Google groups and there I find posts that never made it to me on r.r.s.

I have taken this up with my ISP and they have investigated it and assure me that it is not as a result of any problems at their end.
I would really like someone to get to the bottom of this problem and give an explanation, and more importantly, sort it out.

I experience no adjacent channel interference, even with strong HD
bands right next to weaker, analogue bands. I don't know why you are
spreading this myth.

If you believe that ANY of these GMRS/FRS radios will have a range of
10 miles, I can tell you where you can buy a nice bridge connecting
Manhattan with Brooklyn! ;-)

I think you can get just as good range with two cans and string.

Best,

Joe

It happens on FM, and it is a well-know fact on AM, especially at
night, with sky-wave propagation Why, do you think, the FCC has not
authorized IBOC, at night ? Good old iBiquity, destroying the
broadcast bands ! But, there is little interest in HD Radio:

http://www.google.com/trends?q=%22hd+radio%22%2C+%22internet+radio%22%2C+ipod%2C+%22satell
ite+radio%22%2C+mp3

HD Radio is just a blip-on-the-screen ! Only, a few tens-of-thousands
receivers have been sold - there is no consumer interest, in this farse
!

1002. Pyongyang: budget to deify Kim Jong-il increasing

Newsgroup: rec.radio.shortwave
Date: 2007-01-10 18:22:42 UTC
From: "Guerite." <aim@their.heads>
Message-ID: <12qabmm36jsuc77@corp.supernews.com>
Source record: 103001

...
The main reason behind the increase in propaganda investments appears to be the need to counter the creeping influence of the modern world. "It isn't quite realized in the West how much of a threat the penetration of ideas is. The regime of Kim Jong-il sees it as a social problem that could bring down the state," says Brian Myers, a North Korean expert at Dongseo University in South Korea.

Since the late 1990s, a subtle influx of entirely new products and ideas - hence destabilizing for the regime - has been entering from the borders with China and South Korea. Some analysts have described this as "soft globalization". Pocket radios, CDs, videos, cellphone signals from China and practically any other product of the western cultural industry are feeding a rich form of underground trade.

Smuggling appears to be on the increase in defiance of tough penalties imposed by the regime: for example, those caught listening to broadcasts from abroad risk being sentenced to forced labour.

"""

Guerite is a liar and a fraud. I have added "stupid" because he has
repeated the same fraud he was caught at two weeks ago. He belongs to
"the father" of liars and there is no shame or truth in him.

Just a blip on the screen? I receive over 20 HD stations in my area
alone! Many of these stations simulcast more than one station. It is
a great pleasure owning a radio capable of picking up digital as well
as analogue signals.

After reading many reviews and web pages, I have narrowed my search to this GPS Navigator.

But nowhere can I determine if it gives Lat and Long positions in degrees.

And it is not clear if the unit as supplied gives detailed street maps - not just major highways. Or is this an additional cost?

Any one here own one and can clarify this or offer an alternate unit

Thanks
CL

I just ordered the new ones from Cobra that say "25 miles". They run 5
watts, most I've seen in a handheld GMRS so far. Will give a report when
they arrive in a couple weeks (back ordered).

"'''
'''

Recent polls show that Canadians want no part of a North American Union
no matter what the big boys are scheming in the back rooms. I have some
contacts in the Federal Civil Service and one thing that puts the back
up on the border people is the US visitor who thinks that Canada is
part of the US and he can do whatever he wants. As Alex Jones found out
in Ottawa, some serious attitude adjustment can take place.
Actually, Canada was invaded twice: once in the revolutionary war (
about 1777 I think) and again in the War of 1812, each with the same
result: withdrawal of US forces.
I think that the US wants the tremendous resources of Canada to add
to its own assets which are pledged as collateral for the massive debt
arranged by the Federal Reserve, which in effect is a trustee in
bankruptcy for the US since 1913.
It reminds me of Hitler's invasion of Czechoslovakia in 1938
Hitler's government was nearly bankrupt but the seized assets of Cz
gave him lots of money to carry on. Would the big boys sell out Canada
to get those assets for the US? You better believe it.
We have not heard the last of this.

I have some five-watters that I use very occasionally for specific purposes. Over reasonably open land, I might get two miles, usually closer to 1.25. Unless that Cobra has some super-duper high-gain antenna with penetration through dirt and dense foliage, I doubt if you'll get much more than 10% of the stated range under normal conditions.

My only advice is to keep trying. I've 4-5 Africans I'd love to verify but they
just don't seem to answer. But every now and then, someone new will sit down at a
desk and start verifying.

A blip-on-the-screen, in terms of consumer interest - IBOC supporters,
keep touting how many stations are broadcasting in HD, although 1200,
out of 13500, is a small percentage (and, msot are owned by Clear
Channel, part of the HD Radio Cartel). There is one problem, however -
no one is listening !

HD radio is D-I-G-I-T-A-L - there is no adjacent-channel or any other kind
of interference.
It is near CD quality at 1/100th the power level of the ancient analog
carrier.

Uh, er, my, I feel so low. I have been insulted by Dear Leader.

But the truth will set you free: HD radio is D-I-G-I-T-A-L - there is no adjacent-channel or any other kind of interference.
Unless you are trying to liten to it with an ancient analog radio - bwahahaha. (watching dxAce putting a CD on his turntable with the speed set for 45rpm - LOL)

This is a fallacy. IBOC DOES generate adjacent channel (and second adjacent channel, for that matter) interference. You may be thinking that it doesn't RECEIVE adjacent channel, but I'm sure that even under some conditions, that could also be the case, but it definately CAUSES interference to adjacent and second adjacent analog signals, as has been demonstated in the field many times now.

>code as being a very small part of amateur radio?" By the amount of
>bandwidth allocated? The amount of active cw users? Ever hear of CONTEST

>TIME? The amount of cw users grows exponentially to the decline of phone
>users over the same period.
>
>Your remark about cw being insignificant because it's a very small part of
>ham radio is very insensitive considering the company you plan on keeping.

I did not say insigifacant you mistatements of my psotion and that of
most is most insentive considering who you will soon be sharing the
bands with

>And you say I degrade the hobby?

yes I do becuase you willfully or negliently misrepsent the views of
your fellow hams
>
>> you degrade radio license and the service by your ldistortion or
>> inabilty to read and coment accurately on twhat you read if you
>> message handling skills are a poor as the skills you display HERE you
>> are not fit to operate your radio in any mode
>
>Here we go. Let's haul out the real dirty mud and sling it around to
>distort what the topic is really about.

the topic is obvosly about your inability to accept change and that is
this not say 1950

> The idea behind this thread was to
>discuss why cw is or is not valid for license testing purposes.

no it is about the need of persons like yourself to accept the reality
the code testing has been declared invalid for licensing propuses
>
>Trying to read and understand exactly what you type is no easy task.

then don't do it if you wish but if you intend to contiue I do ask you
stop distorting my owrds
>Don't
>tell me you don't have a problem with spelling much less organizing your
>thoughts.

i never have said that stop trying to put words in my mouth

your thinking is clearly very binary at least relitive to my way
thinking which very non-binary prehaps abnormaly so

> Trying to muddle through what you post is exhausting work.

then don't do it. it frankly seems beyond you
>
>You don't lack creativity, that's for sure. One minute you can't operate
>cw, then you back-peddle and say that you can.

I never said I can operate it manualy I never said I could not operate
it with machinery the problem is you are not flexible in keeping

things in context

> First the test it's to hard
>for you, then you blame the examiners for not administering it correctly.

I have never said that the test examiers are not giving it correctly.
I don't know where you are pulling this well crap for lack of a better
world I am saying the testing is flawed in concept if it it was truely
intended as proof that the passer of such a test is thereby
automaticaly able to USE the mode on the air the soon to be ex rules
insure nothing of the sort, by faling to test tranmit and recieve,
that is I believe as result of a discsion of the FCC

>Now your telling me if I don't agree with you it's because I can't read.

no I am not saying that I saying it is obviouss you can not read
becuase you constantly mistate what I have said and In fairness I find
I need to amend either you can't read or you can't write or you are
simply suffering from some defect of thinking

>
>What you are very good at is blaming everyone else for your own failures.

no just another of you effort to smear me and anyone that disagress
about Morse

>What you really need to do is hold yourself up to a higher standard.

you need to hold to standard of truthfullness and/or politeness

>
>> I don't expect anything form the likes you except your hate and
>> further abuse as I have suffered over the from BAD hams like yourself
>
>How did I abuse you in this thread and when did I say I hate you?
how about right here"What you are very good at is blaming everyone
else for your own failures. "

that is an abusive statement
> Do you
>have this preconceived notion that people are out to get you.

no preconceived notion at all I have the death threats in my inbox to
tell what reception I can expect on air

>
>If I said something out of line that really hurt your feelings I apologize
>but beyond that you can't blame the system for your failures.

where have I blamed the system?
misrepsenting my statements is insulting

the system has worked roughly as it should the people have the right
right to petion for redress of greivemnces people like me allied with
other did exactly that, petion the FCC first for th ewhat became the

NCT then the 5wpm general then petioned the ITU to change the s25.2
then the FCC fr the change we feel is best for the ARS. my biggest
beef with the system is the time this issue has been dragged out 30
years now it has taken
>
>I learned a long time ago that when someone invents excuses for failures
>it's time to say auf Wiedersehen!

wand when some presume to know another abilities without walking in
thier shoes it called arragnce and when they act on those assumtion in
attacking another I call it abuse
>
>I'm going to end my contributions to this thread by saying best of luck to
>you, you'll need it and by quoting myself:
>
>>>You want to take the easy way out and I can't stop you, just don't
>>>expect any pats on the back from those of us who had to work for what
>>>we got.
>
>>>Here goes the neighborhood!

yes you finsih by quotingyourself being insulting
>

No.. no one understands... when he *first* put up the radio, he had $38.25
for shipping, after I sent him an email, I went back *later* and it was
changed to what you all saw now, so now it's no longer an issue.

That's correct; sequestering agent = chelating agent = complexing agent.

I tried for several years to get a QSL out of SLBC and had absolutely no luck. The following site lists a date of October 2005 for a QSL issued from SLBC: http://www.schoechi.de/az-cln.html.

Maybe that's a sign that there is still some hope to get one? Bonne chance/good luck!

No worries, its getting warmer and warmer every year.
We haven't had snow on christmas in quite a few years. Tempatures usually
only get a little below freezing now. Go back 10 years and there was always
snow and many a days where it was -30 C
Give it a few more years and it will be plenty warm in most of Canada

G'day All,

I believe based on Passport to WBR that I've got Radio Kuwait directed
to N. Africa at 57 AM and S3 in USB to remove adjacent interference from
15.500 CRI (China).

Have had solid copy since tuning in at 0835UTC - 0850 UTC with little fade.

Anyone else Confirm ?

Regards
Mark

Location: Canberra Australia
Radio: Icom R75 with DSP options
Antenna: Cliff Dweller 2

Source record: 103072

"For Americans the unifying theme of the nation was that they were to be the vanguard of human progress. Their nationalism naturally led them to look beyond the natural boundary."

This rhetoric began with Washington, Franklin and Jefferson and has been a reliable rallying cry with the American people ever since. Kagan calls it "liberal expansionism," using the 18th century definition of the word. Those who reflect this attitude today are sneered at as "neocons" by the far right and the far left. Today's liberals mock George W. Bush for saying the terrorists hate us for who we are. But as Kagan points out, foreign monarchs and despots considered the United States a threat from its birth because they feared the example it would set for their subjects. That alone made the United States a "dangerous nation."

Source record: 103074

Call Garmin ????
Gave the 350 as a Xmas gift, to daughter, and did not get a chance to
play much before it went away.
Seem to have all the streets as my 2720, down to my 1/2 mile long, dead
end, address.
Looked to have the same screen options.
The 2720 displays lat/lon on an info screen along with speed and
compass.
It's not in the book, but I found how to input lat/lon as a go to.
Select an address, go to edit and lat/lon is one of the items to edit.
Change it and change the name as a new address, then hit go to.

I wanted the Nuvi for portable, but more so, wanted to feed a laptop.
Called Garmin. They said no on the Nuvi, yes for the 2720.

Walmart had a Nuvi 350, pre-Xmas sale for $488

Thanks for the reply
Found the Garmin Nuvi manual on line and yes it will give current lat/long
in one of the menus

Also I pinged on the news group "alt.satellite.gps.garmin"
Lots of Garmin 350 users there

One of the guys there offered advice on feeding Nuvi 350 via USB port for
APRS

Here is his post if you want to contact him
From Fred K4DII
fmmck@AOL.com

"One disappointment for Ham Radio, was that it doesn't seem to be able to
change the coordinate format to display Grid Square information. My
older Garmin GPS can display several formats including Grid Squares, as
in EL98np. If someone figures out how to do it, please let me know!

If you intend to use the Nuvi for APRS, it has a USB port but not a
regular serial port."

and others

Strom had been a leader of the National Alliance. After the death of NA leader William Pierce, (author of the "Turner Diaries" which is alleged to have inspired Timothy McVeigh) he got thrown out in a power struggle and he then started the Ntional Vanguard. (which had been the title of the NA's magazine)

He stepped down as leader of the NV in March 2006.

Jeremy Perea, 17 and Matthew Downing, 25, the leader of the Boston NV were arrested in the neighboring city of Brookline on the basis of a 12/19 incident. Downing was charged with statutory rape and Perea was charged with inducing a minor to become a prostitute and sexual conduct for pay.

Perea and Downing worked at a pizza parlor and Perea brought two girls to Downing's basement apartment where he frequently stays. Allegedly, Perea was going to be paid $60 or $150 and a bottle of Barcardi, less a $50 payment to the girls if they "hooked up" with Downing. Once the girls were there they were threatened by Perea with "no ride home" if they didn't have sex with Downing. The 14-year-old agreed to a blow job. The next day, the other girl went to the Norfolk County D.A.

yes. Here, I hear long time hams who know and passed the morse code
test, singing on the ham bands. These hams don't report the other hams
for violating FCC rules by singing on the ham bands, yet these very
same hams report cb operators they hear singing on the cb bands.

That shows what kind of people the hams are.

"elses" is in the possesive case and should have an apostrophe: else's
(punctuation error)

You had better stick to plagiarizing if you can't get a sentence
correct
You are just driving Asswide to gorge himself in frustration over the
misuse of apostrophe.

Go buy a radio.

Ebay has had a lot of listings for this radio under "Sharper Image."
It is listed in the $40.00 range which makes C$100 a bit stiff. One
post on rec.radio couldn't get it to tune above 21 mhz but that is all
I have heard. It is an interesting radio and I was thinking of getting
one but the "the source"s" stock for the model was not the neat one of
the illustration, but was a garish thing that looked like some sort of
Oriental bug with lots of bling. Even if it was a good radio, I
wouldn't have a thing like that in the house. The earlier model,
however, had a clean design.

When I was in school decades ago, we were taught that apostrophes must
be used in certain plurals, no exceptions ever. Such as

The kids' brand new shortwave radios work great.

The girls' new dresses are pretty.

We would get it marked wrong if we didn't use an apostrophe in thosee
plurals.

Writing kid's or girl's means singular insterad of plural.

I have to agree with the original poster. I fell for all the digital hdtv thing they're promoting and bought devices with atsc hdtv tuners. Once analog tv is shit off, we won't have any tv at at all. I tried everything.

Outdoor Rooftop antenna with rotor.

outdoor rooftop antenna without rotor.

indoor rabbit ears.

even digital cable company hdtv doesn't come in watchable. nor listenable.

If digital hdtv is any indication of what digital radio will be like, then the original poster is correct that we're all screwed.

Analog tv came in fine and clear with an outdoor roof antenna with rotor. Can't say the same for digital atsc tv.

The regular antennas didn't work for digital. Neither did the antennas marked specifically for hdtv. The regular antennas actually did a better job for digital hdtv than the ones matrked specifically for hdtv, yet neither made any of the digital stations watchable.

about 20 miles from the tv station transmitters.

There were also reports in the newspapers and on the news here about people who died (who would have otherwise lived) because the police switched over to digital radios and couldn't get as good of reception as their old analog system did.

National VANguard?? No, something tells me Strom's next organization
will be the National REARguard. (yuk, yuk!)

It's amusing how groups that have historically yelled their lungs out
about "moral degeneracy" in culture and the arts have so many leaders
who are "worse" (by their own criteria) than the perverts and deviates
they complain about and whose books/pictures they burn.

Nazis, Bolsheviks, Catholic Priests, TV Evangelicals, family values
rightwing kook politicians... Apparently the secular bourgeois
liberals aren't so decadent after all...

I've tried to buy IRC's (International Reply Coupons) at the local P.O., even though they have them, they won't sell them! Their screen says: "Not For Sale" when they are scanned.
This has happened at the main Helena, MT P.O. and Tuesday at the Missoula, MT P.O.
Anyone else experiencing this problem? BTW, these are the new ones good until 2009.

Try the attached link to email a complaint to the USPS. (It's so long
that it may get f**ed up by the server if I don't use an attachment.)

It seems to work. Once, when I tried it to complain that the
self-service area of my local PO was closed at 8:15 A.M. when it was
supposed to open at 7 A.M. I got a phone call from the head of that PO
in a day or two.

If you need more than a very small ammount of return postage from any
one country you might consider one of those ham services that sells
mint non-philatelic stamps. They're quite a bit cheaper than IRC's and
the recipient doesn't have to chase down the only post office branch
in the province which redeems IRC's, thus speeding your QSL.

For ham stamp services see

http://www.angelfire.com/md/k3ky/page35.html

Those are all POSSESSIVE plurals. If the case doesn't call for a
possessive, then you don't use the apostrophe.

"These kids have great, new shortwave radios."

"Those new dresses the girls have sure are pretty."

Since those formulations explicitly state the possession, there is no
need for the apostrophe, even though the nouns are plurals.

Clear?

If you Google "five band global tuner ct 800" you will get about 80
hits, none of them much use.
There are four reviews on Amazon.com: they are not much good mostly
obsessing with the bright leds.
Nothing about sw sensitvity, bandwidth, image rejection or anything
useful. One review said it had good AM sensitvity, one said it sounded
good, another said it made loud pops when switching. It seems to be
discontinued and any that are left in stock are being cleared at
$49.95. I think that the one I saw at The Source must be the new model
(ugh, shudder) . You could look up the previous post and ask how he
likes his. I seem to recall he used "Sharper Image" in the title.

A massive arctic cold wave is heading for the midwest and east. It has already hit the prairies with record cold and blizzard conditions with three dead so far. A front of this strength can affect radio reception so it might be worthwhile to tune through the bands for the next four days.
Household tip: For some unknown reason, hot water pipes freeze before cold water pipes.
A trickle of water will prevent pipes from freezing.
Thed Global warming debate will resume in July.

This arctic air has hit the left coast as well.

The deal with the hot water pipe freezing first is due to the lack of dissolved gasses in the water. That is, the heating process takes the dissolved gasses out of the water, which in turn makes it easier to freeze.

Theories of the USSR In Light of Its
Collapse
by Barry Sheppard

The collapse of "really existing socialism" in the USSR and Eastern Europe a decade ago came as a shock to all tendencies in the workers' movement and the political representatives of the capitalist class worldwide. No-one predicted such an outcome beforehand-no-one alive, that is. Why was this so?

To answer this question, it would be useful to review the differing views on the character of the USSR.

Stalin and his heirs claimed that the USSR had achieved socialism in the 1930s and was a classless society. The regime claimed, "We have not yet, of course, complete communism, but we have already achieved socialism-that is, the lowest stage of communism".1

For Marx, Engels and Lenin, socialism, or the lowest stage of communism, would be built on the basis of the technological achievements of capitalism. From that base, it would rapidly develop the means of production to raise the level of productivity of labour beyond that in the most advanced capitalist countries. But the revolution had occurred in the most backward European capitalist country, Russia, and did not succeed in spreading to the advanced European countries. Isolated in a hostile capitalist world, the USSR, in spite of the major strides forward it made, was never able to reach anywhere near the level of labour productivity of the advanced capitalist countries. Its products were inferior and could not compete on the world market. Under constant military threat, it was forced to devote a huge proportion of its production to its military. Throughout its existence, it was a regime of relative scarcity and therefore of inequality.

Scarcity and inequality led to the creation of an economically privileged bureaucracy. Shortly before the October Revolution of 1917, Lenin wrote The State and Revolution. Drawing upon Marx and Engels, Lenin wrote, in answer to opportunist socialists who rejected the Marxist idea of the withering away of the state as the transition to communism was made:

The proletariat needs a state-this is repeated by all the opportunists. But they "forget" to add that, in the first place, according to Marx, the proletariat needs only a state which is withering away, i.e. a state so constituted that it begins to wither away immediately and cannot but wither away.2

This norm of socialism certainly was never met in the USSR-the state mushroomed into a monstrosity, and showed not the slightest tendency to die away.

Lenin further explained that the proletariat would have to shatter the old bureaucratic machine of the capitalist state, and create its own apparatus out of employees and workers. He said the proletariat would take measures against their turning into bureaucrats-measures "specified in detail by Marx and Engels: (1) not only election, but also recall at any time; (2) pay not to exceed that of a workman; (3) immediate introduction of control and supervision by all, so that all may become 'bureaucrats' for a time and that therefore, nobody may be able to become a bureaucrat".3 Soviet reality went in exactly the opposite direction of these norms of socialism as envisioned by Marx, Engels and Lenin.

That the bureaucracy rose above society is now well known, as are the crimes of Stalin and his heirs. Framing, imprisoning and murdering hundreds of thousands of communists and millions of workers and peasants is not the mark of a socialism on the road toward building communism-that is, a society in which the state has withered away and which operates, said Marx, on the principle of "from each according to his abilities and to each according to his needs".

What does the collapse of the USSR tell us about whether it was a socialist society? First, the bureaucracy itself-what some call the nomenklatura-now believes that capitalism is superior to what it used to call "socialism". Its members are desperately seeking to become capitalists as individuals. Second, the ignominious nature of the collapse, the collapse from within without a shot being fired, is the clearest demonstration that the USSR had not achieved socialism, a system qualitatively superior to capitalism.

If the USSR had actually achieved the stage of socialism, it could not and would not have collapsed before capitalism.

An important conclusion is that the collapse of the USSR was not the collapse of socialism.

We can dismiss the various ideas of pro-capitalist opponents of the USSR, who, like the Stalinists, also claimed that it was socialist. They also said that the crimes of Stalinism proved that socialism was an evil enemy of humanity. Now, they further claim that the collapse proves that socialism doesn't work and that capitalism represents the pinnacle of human development. Social Democracy basically was in the capitalist camp, and has come to the same conclusion that socialism is impossible.

That leaves the ideas developed by a minority in the workers movement, those groups that originated in the Left Opposition in the USSR and in the Communist International, led by Leon Trotsky. These groups were expelled in the late 1920s. In this milieu there developed, especially after the Stalin-Hitler pact in 1940, three opposing theories of the USSR that led to sharply counterposed political positions.

One view was that the USSR was a form of state capitalism. In recent decades, probably the most important group holding this position internationally was the British Socialist Workers Party and its allied grouplets in other countries, led by Tony Cliff.

Another theory was that Stalin's ussr was a new form of class society unforeseen by Marx and his followers, which its proponents called "bureaucratic collectivism". In this view, the bureaucracy was a new ruling class, which exploited the labouring people, the wage workers and the peasants, in a new way. Those who held this viewpoint were strongest in the United States and, from the 1940s, were represented by the organisation led by Max Shachtman, which took various names before it dissolved into the Socialist Party-Social Democratic Federation in the 1950s and rapidly moved to the right. Many who held this view came to the conclusion that capitalism had to be supported as the lesser evil to bureaucratic collectivism-this underlay the support Shachtman and his supporters gave to Washington in the Vietnam War. A left split from Shachtman, led by Hal Draper, was perhaps the most important tribune for the theory of "bureaucratic collectivism" from the 1960s through the present. Today it is represented by one section of the US socialist organisation Solidarity.

The third theory was Leon Trotsky's; the other two theories were developed in opposition to Trotsky's theory. This view held that the USSR from Stalin's time on was a highly contradictory society. On the one hand, it preserved in a distorted form the main social conquests of the 1917 Russian Revolution, including the nationalised and planned economy, the state control of foreign trade, and a currency independent of the capitalist currency market. On the other, the bureaucracy in the government, the Communist Party and the management of industry had taken all political rights from the workers and peasants. The USSR was a "bureaucratically degenerated workers' state". That is, the Soviet Union remained a dictatorship of the proletariat-a regime between capitalism and socialism.

What proponents of these three theories had in common-at least those who remained partisans of the Russian Revolution-was that Stalinism represented a counter-revolution to 1917. The Stalinist terror against the best communists and advanced workers, and against the whole working class and peasantry, in which millions lost their lives, had the function of politically atomising the toiling classes and consolidating the totalitarian rule of an economically privileged bureaucracy. In the process, the Communist (Bolshevik) Party was smashed and replaced with a bureaucratic apparatus. The soviets were similarly transformed. All three tendencies called for a revolutionary struggle to overthrow the

rule of the bureaucracy and re-establish proletarian democracy to keep the bureaucracy in check and once again embark on the road to socialism.

The sharpest conflicts between these tendencies occurred around the question of defending the USSR against imperialism. The second world war posed the issue in an acute manner when German imperialism invaded the Soviet Union. The followers of Trotsky came out unequivocally for the defence of the USSR. Proponents of the other two theories took a "plague on both your houses" position. They believed that there was nothing left to defend in the USSR. Similar differences were expressed following the second world war in relation to Korea, Eastern Europe, China, Vietnam and Cuba, and also in relation to the Cold War itself.

Cuba is in a separate category in my opinion. The proponents of both the state capitalism and bureaucratic collectivism viewpoints generally believe that Cuba is one or the other, and believe that the Cuban regime should be overthrown. I do not think that Cuba is Stalinist. I think Cuba is a workers state with bureaucratic deformations (as Lenin said of the USSR when he was its central leader), and that its leadership around Castro is revolutionary socialist and should be supported.

Another difference was that those who held either of the first two theories thought that the USSR was imperialist.

One of Trotsky's main criticisms of the Stalinists was their abandonment of the perspective of world revolution, in favour of seeking an agreement with imperialism that would leave the Soviet Union alone in return for Kremlin support for capitalism elsewhere through its control over the Communist parties. In the 1930s Stalin's line against socialist revolution led to defeat in the Spanish Civil War and in the French general strike. While socialist revolution was not on the agenda in the United States as it was in Spain and France, Stalin's line for the US after 1935 was to help corral the new labour radicalisation into the Democratic Party. Basically the same policy was followed after the war right up to the collapse.

In the aftermath of the second world war, with the development of Stalinist regimes in Eastern Europe and in China, North Korea and Vietnam, proponents of the state capitalist and bureaucratic collectivist theories dropped Trotsky's criticism of the Stalinists' essentially conservative line on world revolution, and began to see the ussr as the centre of the expansion of bureaucratic collectivism or state capitalism into a new evil empire.

Those who supported Trotsky's views defended these extensions of the revolution, even in their distorted form. The overturns in Eastern Europe were seen as a defensive move by Stalin to set up a buffer between the European imperialist countries and the USSR, in response to the launching of the Cold War by the West. The "cold" war at any point could have turned into an invasion of the USSR, and this outcome

was prevented only by the "balance of terror" once the USSR developed atomic weapons and built its armed forces into a formidable counter to NATO.

The overturns in China and Vietnam were seen differently by those who held this viewpoint. These occurred through real mass revolutions, at the head of which were parties trained in the Stalinist tradition, but which decided to lead the mass revolutionary struggle to power in opposition to Stalinist conceptions. The mass uprisings played a key role in these decisions, and resulted in regimes that had different dynamics than those in Eastern Europe.

All these differences were thoroughly documented and debated in the decades before the collapse of the Soviet bloc. The purpose of this article is not to rehash those debates, but to take a fresh look at these three theories in the light of the collapse. Those interested in learning about those debates can consult the literature.

A striking feature of the attempt to restore capitalism (or go back to "ordinary" capitalism for those who hold the state capitalist view) in the republics of the former USSR and Eastern Europe is the way in which privatisation of the nationalized industries has occurred. Key to this has been the scarcity of capital, noted by virtually all commentators.

In an important article, "The Necessity of Gangster Capitalism: Primitive Accumulation in Russia and China", Monthly Review, February 2000, authors Holmstrom and Smith point out, "The nomenklatura collectively monopolized control of the means of production [in the USSR] but they did not own them privately. The [new capitalist] class had to be created." Referring to Jeffery Sachs, one of the Harvard economists who advised the Russians to embark on wholesale and rapid privatisation after the collapse, they write:

Sachs's protocols for the transition contain no discussions of robber barons or gangster capitalists. Fetishizing an abstract ahistoric model, Sachs imagined that once prices were freed, once private enterprise was legally permitted, "capitalists" would somehow appear, stride forth, and take command of the economy. But where were those capitalists to come from? In 1990, no one in Eastern Europe or Russia had significant monetary wealth or private property in the means of production. There was no bourgeoisie-not even a pre-revolutionary bourgeoisie to give the economy back to. As the joke went in Poland, "What were they to do-give the Lenin shipyards back to the Lenin family?" So no one had the means to buy the factories, the mines, the forests, the collective farms, or to hire labour.4

Further, Holmstrom and Smith point out, capitalists

... had to be created. Individuals had to take possession, privatize property, factories, mines, wells, and forests. But since no one had the money to buy these state properties from the government, there was

no feasible way this could be done legally, legitimately, or morally ... This class had to be hothoused, virtually overnight. And it was. In the end, a combination of elements of underground mafiosa, the nomenklatura, especially the top management of certain industries, and segments of the intelligentsia-these people were essentially drafted to privatize the economy criminally.5

In other words, there weren't enough owners of sufficient capital to be able to buy up the formerly nationalised industries. What does this mean for the theory that these countries were state capitalist? If the words "state capitalist" mean anything, it is that in the USSR capital accumulation should have been taking place as in every other form of capitalism. Since this capital accumulation had been going on for decades, presumably, quite a mass of capital should have been generated, and it should have been in the hands of real people. Since in the theory of state capitalism the bureaucracy collectively exploited the working people on a capitalist basis, at least a section of the bureaucracy should have amassed enough capital to buy up the nationalised industries. But it turns out that that was not true. The bureaucrats clearly were not capitalists of any variety, because they didn't accumulate capital on the scale that would have happened if the society functioned on the basis of capitalist accumulation. They are scrambling to become capitalists in the new situation-to become something they were not before. And they are trying to do it without sufficient capital beforehand, hence the theft. The theory of state capitalism collapses in the face of this reality.

The theory that the USSR was bureaucratic collectivism held that the bureaucracy had become a ruling class of a new type. It exploited the workers and peasants, but in a new way, not seen before. It wasn't capitalist and the society didn't function on the basis of capitalist accumulation.

According to proponents of the bureaucratic collectivist theory, Marx and his followers were wrong in thinking that the choice before humanity was capitalism (which would degenerate into barbarism if it were not overthrown) or socialism. The history of the Soviet Union and similar societies, they felt, showed that a third outcome was possible, and that this new society had some very unappealing features, such as a bureaucratic totalitarian dictatorship.

How does this theory stack up against the historical reality of the collapse of the USSR?

This theory suffers from the same problem that the theory of state capitalism does, for even though it held that the bureaucracy did not exploit the working people on a capitalist basis, it did exploit them. Why then isn't there the "bureaucratic collectivist" wealth on a scale large enough to be turned into capital to privatise the economy?

The main feature of the collapse of the USSR has been the turn of the ruling bureaucracy toward capitalist restoration. That is, they are

trying to abolish the system they grew up under (the first Soviet bureaucrats are all dead), the very system under which these bureaucrats garnered their privileges. Isn't this one of the more curious developments in history?

If the bureaucracy were a ruling class of a new type, which arose on the basis of the overthrow of capitalism, its obvious desire to transform itself into a new capitalist class would be very odd indeed.

Even if we assume that the bureaucratic collectivist theory was correct for the USSR, the collapse of this system, and the desire of its ruling class of a new type to become a capitalist ruling class, demonstrates that this system was not historically viable, and its ruling class itself has come to this conclusion. The ruling class of a new type no longer wants to exist!

The time from the rise to power of Stalinism in the USSR to its fall was some six decades or so. That is not long from a historical perspective. So the "third way", even if it existed for a brief time, was never a viable new form of society. Historically speaking, the collapse of the USSR proves that there is no basic third alternative to capitalism or socialism.

Marx was right.

Holmstrom and Smith argue that Russia has had to go through a stage of primitive accumulation of capital, similar to that at the rise of capitalism, in order to restore that system. They also point to the necessity for the other class that must come into existence for capitalism to function, the propertyless proletarians. In the USSR, they write:

Russian workers certainly did not own the means of production, but they did, and many still do, in a real sense "own" their jobs. They had long-established rights to housing, state-provided medical care, childcare and numerous subsidies from the state. These social property rights are being destroyed in the process of transition to a "normal" market economy. Divested, "freed" from control, possession, or ownership of means of production, the majority of people of the former Soviet Union are forced to come to the market with, in Marx's words, "nothing to sell but their skins."

In other words, labour power has become, or is becoming, once again a mere commodity in the newly created market. The results of the transition, Holmstrom and Smith point out, have been "an unmitigated disaster. In the first year of the reform, industrial output collapsed by 26 percent". This was far worse than the few percentage points drop in the last years of the USSR.

Between 1992 and 1995, Russia's GDP fell 42 percent and industrial production fell 46 percent-far worse than the contraction of the US economy during the Great Depression ... Since 1989, the Russian economy has halved in size, and continues to drop. Real incomes have plummeted

40 percent since 1991; 80 percent of Russians have no savings. The Russian government, bankrupted by the collapse of economic activity, stopped paying the salaries of millions of employees and dependents. Unemployment soared, particularly among women. By the mid to late nineties, more than forty-four million of Russia's 148 million people were living in poverty (defined as living on less than thirty-two dollars a month); three quarters of the population live on less than one hundred dollars per month.6

They go on to list the drop in life expectancy, the rise in suicides and alcoholism, increased abandonment of children and similar social indicators.

Clearly, the transition to capitalism has been a human catastrophe from the point of view of the workers. How do the supporters of the state capitalism and bureaucratic collectivism theories explain this? Was state capitalism or bureaucratic collectivism superior in some aspects to capitalism? What were those aspects? Weren't things like job security, pensions, free health care, subsidised housing and free education, based upon the nationalised and planned economy and other social conquests of the revolution which weren't eliminated until the headlong drive toward capitalist restoration-the very things those who held to Trotsky's theory thought were worth defending?

Let's turn now to Trotsky. In 1938 he summed up the prospects for the USSR:

The Soviet Revolution emerged from the October revolution as a workers' state. State ownership of the means of production, a necessary prerequisite to socialist development, opened up the possibility of rapid growth of the productive forces. But the apparatus of the workers' state underwent a complete degeneration at the same time: it was transformed from a weapon of the working class into a weapon of bureaucratic violence against the working class and more and more a weapon for the sabotage of the country's economy. The bureaucratization of a backward and isolated workers' state and the transformation of the bureaucracy into an all-powerful privileged caste constitute the most convincing refutation-not only theoretically but this time practically-of the theory of socialism in one country.

The USSR thus embodies terrific contradictions. But it still remains a degenerated workers' state. Such is the social diagnosis. The political prognosis has an alternative character: either the bureaucracy, becoming ever more the organ of the world bourgeoisie in the workers' state, will overthrow the new forms of property and plunge the country back into capitalism; or the working class will crush the bureaucracy and open the way to socialism.7

Isn't the first alternative exactly what is happening? Sections of the bureaucracy began to be attracted to the West. The more privileged layers of intellectuals-scientists, engineers, artists and so forth-looked with longing at their counterparts in the advanced

capitalist countries, who had more freedom and better lives than they did. The same was true among managers in the state enterprises. The official state ideology that the USSR was a classless society, without a privileged bureaucracy, was so at variance with the bureaucratic reality that the privileged themselves became cynical. They no longer believed in socialism, even as a far-off goal. We need only reflect that Yeltsin was a member of the Political Bureau of the Communist Party of the Soviet Union to see what an anti-communist outfit it really was.

But most of these things had been true for some time, decades in fact. What happened to finally lead the bureaucracy to take the plunge toward the restoration of capitalism? I think that to answer this question it would be useful to look at some of the shortcomings among those who supported the theory of the bureaucratically degenerated workers' state.

The horrors of the Nazi invasion in the second world war were countered by a great mobilisation of the Soviet people. Through immense sacrifice (some 20 million dead) they stopped and then smashed the German war machine. Following the war, another great mobilisation of the Soviet people occurred in the rebuilding of the country. The inherent power of the planned economy in furthering both these achievements was clear and understood by the Soviet masses.

In the postwar period, the isolation of the USSR was partially broken. The revolution was extended into the countries occupied by Soviet troops in Eastern Europe, although in a very bureaucratic and controlled way, in reaction to the West's unleashing of the Cold War. The Chinese Revolution was a massive breakthrough. The upsurge in the colonial world as a whole brought new nations into at least friendship with the USSR and its bloc. While there were no breakthroughs of the revolution in the imperialist West, which would ultimately be decisive in the collapse, it appeared to many that history was on the side of the USSR.

The leadership of the US Socialist Workers Party and of the United Secretariat of the Fourth International came to the conclusion that the alternatives proposed by Trotsky in 1938 had been bypassed. I was a part of those leaderships and thought so too. While this view was not explicitly written down, our documents just dropped the alternative possibility of capitalist restoration. We thought that the working class had grown strong enough, and socialist consciousness was deep enough, that the bureaucracy couldn't possibly overthrow the nationalised and planned economy. The achievements of the planned economy were impressive. In spite of its backwardness, the Soviet Union had been able to develop a powerful military that held imperialism in check. The USSR had the atom bomb. Science in the Soviet bloc took big strides forward, as did basic education and the arts. China and North Korea had fought Washington to a stalemate in the Korean War. We thought that the working class had grown strong enough, and socialist

consciousness was deep enough, that the bureaucracy couldn't possibly overthrow the nationalised and planned economy.

We of course knew that the planned economy was warped by the fact that it was the bureaucracy that did the planning, and could not reach its full potential without the input of the workers, which was impossible without workers' democracy. But we failed to give sufficient weight to something that Trotsky had pointed out: that bureaucratic planning could have successes, even some big successes, as long as it was copying techniques of mass production developed in the West. "It is possible to build gigantic factories according to a ready-made Western pattern by bureaucratic command-although, to be sure, at triple the normal cost", he wrote in 1936.

But the farther you go, the more the economy runs into the problem of quality, which slips out of the hands of a bureaucracy like a shadow. The Soviet products are as though branded with the gray label of indifference. Under a nationalized economy, quality demands a democracy of producers and consumers, freedom of criticism and initiative-conditions incompatible with a totalitarian regime of fear, lies and flattery ... Soviet democracy is not the demand of an abstract policy, still less an abstract moral. It has become a life-and-death need of the country.8

The result of the lack of socialist democracy was that by the 1970s, the Soviet economy stagnated, and then actually contracted a bit, for the first time since the second world war. More far-sighted people in the bureaucracy began to see that more openness and transparency in society and in economic planning were necessary. Among the masses, especially in Eastern Europe but also in the USSR, there were movements toward more democracy. The successes in the USSR and in Eastern Europe in the field of education and industrialisation meant that working people and the middle layers were far above the cultural level of the masses of the USSR when Stalin consolidated the power of the bureaucracy in the late 1920s. This process culminated in Gorbachev's campaign for glasnost and perestroika.

Gorbachev's proposals went in the direction of introducing gradually aspects of bourgeois democracy, not workers' democracy. That is, his proposals didn't go in the direction of empowering the workers and peasants to democratically run their enterprises, or to reviving the soviets as real workers and peasants committees to democratically run the government and the economic plan.

Undoubtedly, Gorbachev's campaign was welcomed not only by the more far-seeing sections of the bureaucracy, but by the Soviet masses as well, who wanted to break out of the stifling bureaucratic straitjacket and achieve more democratic rights and democratic functioning of the government. These aspirations were progressive and had to be supported.

Under Gorbachev, central control over economic administration was dismantled, but it was not replaced by popular control from below. The

result was that the centre became powerless. It turned out that the relaxation of the bureaucracy's totalitarian control over political debate, information and activity led to calling into question the power and privileges of the bureaucracy itself. The Gorbachev reforms failed. The only way to preserve the bureaucracy's privileged access to consumer goods and services, in the face of the disintegrating "command" system, was to "go legit" and link those privileges to private property.

Another centrifugal force was national oppression in the Soviet Union. One of the features of the Stalinist counter-revolution was the reversal of the Bolshevik position supporting national self-determination for the oppressed nationalities under tsarism. Lenin's last fight against Stalin revolved around this question. Stalin reintroduced Great Russian chauvinism and national oppression. As the totalitarian grip was relaxed under Gorbachev, the USSR's long oppressed national minorities began to demand their rights, which led to the plans to hold a referendum on the continued existence of the Soviet Union itself. These plans led to the abortive coup attempt against Gorbachev, the mass resistance to it, the collapse of the USSR and Yeltsin's initial popularity, which he utilised to begin the transformation to capitalism.

How could the bureaucracy embark on this road without unleashing a civil war? When Trotsky outlined the two possible political outcomes for the USSR in 1938, he thought that either course would entail a violent struggle. In 1938 this was undoubtedly true. Among the workers were still the generation of 1917. The great majority of the population believed in socialism, even though they chafed under the yoke of the Stalinist dictatorship.

It is clear now that the consciousness of the Soviet working class in 1989 was not as it was in 1938 in spite of the Stalinist terror. After 40 more years of stultifying bureaucratic rule, socialist consciousness had ebbed, especially in the context of the economic difficulties the Soviet Union was facing. Moreover, there was no political party that stood for the rebirth of the Soviet Union on the basis of Leninism, unlike in 1938, when there were still tens of thousands of Bolshevik-Leninists alive, even if they were in prison. The living link of cadre going back to the revolution had been lost. The workers were politically leaderless.

Thus the counter-revolution, begun back in the 1920s when the bureaucracy usurped power, reached its culmination in the bureaucracy's project to restore capitalism, and this happened without a civil war.

But the process has not been without resistance by the workers. There have been regional and local strikes and demonstrations, some that have resisted police violence. There are indications that worker resistance is becoming more organised, but it has yet to take on a nationwide character.

I have left out the parallel and intertwined developments that were occurring at the same time in the countries of Eastern Europe. For a more complete picture, they should be included. But here I want to note only certain aspects of the history of Eastern Europe after the second world war.

With the exception of Yugoslavia, the social transformations in these countries were carried out under conditions of occupation by the Soviet army. To be sure, workers were mobilised to support the overthrow of capitalism, but in a tightly controlled way. Stalin so feared that things might get out of hand (as later happened with regard to China) that he arrested and shot his loyal followers who were at the heads of the local Communist parties. So in addition to the imposition upon these countries of Stalinist regimes along with the social transformation, these regimes were very weak, and depended on Soviet troops, who were seen as foreign occupiers. This was one of the reasons there were real attempts to break out of the Stalinist straitjacket in Eastern Europe and not in the Soviet Union in the postwar years.

The first of these was the 1953 worker uprising in East Germany. It was suppressed by Soviet troops, but forced some economic concessions from the Kremlin. In Poland in 1956 and in 1970, there were powerful mass movements for socialist democracy that the bureaucracy was able to coopt over time with the threat of Soviet troops in the background.

The Hungarian Revolution of 1956 succeeded in toppling the bureaucratic regime. The army went over to the side of the workers, and the secret police was smashed. A government led by the liberal Communist Imre Nagy came into power, which included old time socialists. This was only a decade after the end of the second world war. Hungarians remembered vividly the Nazi occupation and that particularly horrible form of capitalist rule. The new government pledged to preserve the social gains of the workers' state, but to introduce democracy. Soviets (councils) of workers, soldiers and peasants appeared. If this development had been allowed to continue and a democratic workers' state had been established, this would have had a profound impact on the rest of Eastern Europe and the Soviet Union itself. The Kremlin felt mortally threatened, and moved to crush the uprising with tanks.

Similarly, when the "Prague spring" erupted in Czechoslovakia in 1968, under the slogan of "Socialism with a human face!" the USSR again invaded.

I think the last effort to democratise one of the workers' states on a socialist basis in Eastern Europe was the upsurge of the Solidarity trade union in Poland. Solidarity's 1980 program, adopted after long debates in the workplaces, would have led to a working class and egalitarian government on the basis of retention of the nationalised and planned economy. The imposition of martial law to suppress Solidarity, with the threat of a Soviet invasion in the background, seems to have been the last straw to break the back of hope for socialist renewal in Eastern Europe. Solidarity itself split and disintegrated, and what later emerged as "Solidarity" had lost the

spirit and content of the 1980 program.

When the mass movements for democracy erupted in Eastern Europe at the end of the 1980s, pro-capitalist elements were able to take the leadership. While these mass movements for democracy were progressive and had to be supported by Marxists, they were unable to move toward socialist democracy.

In both the former Soviet Union and Eastern Europe, nationalism and racism have flared, including into wars. At bottom, the failure of these bureaucratised workers states to solve the many national questions throughout the region, and their perpetuation of national oppression, is at fault. To this we must add the Stalinist turn away from internationalism, with a resultant increase in xenophobia and outright racism. Black socialists from the US who travelled to Eastern Europe in the 1980s reported they felt the racism. The turn to capitalism, with its attendant negative impact on the welfare of the workers, rising unemployment and so forth, is creating new fertile ground for racism, and it has exploded far beyond what it was before the collapse.

We have also seen sharp blows dealt to women since the turn toward capitalism. The Stalin counter-revolution also reversed Bolshevik policy in this field. While the Bolsheviks weren't able to realise their program of the gradual socialisation of domestic labour due to the poverty and devastation of the country, the Stalinists once again placed the burden of such labour on the backs of women in fact and in theory, in their program. But still there were gains in health care, care of the aged, education and employment for women in these bureaucratised workers' states. The turn towards capitalism has caused unemployment among women to soar, prostitution to become rampant and sexist ideology to flourish.

The transition to capitalism in Eastern Europe has not been as catastrophic as in Russia, but it too has been marked by great losses for the working class. Workers in both the republics of the former USSR and Eastern Europe remember the social conquests they used to take for granted. They will resist more and more what the transition to capitalism is bringing and will bring down upon them. It is through these struggles that socialist consciousness can once again emerge, and new revolutionary socialist parties built. The workers of the former USSR and Eastern Europe know they do not want to go back to Stalinism. They are learning and will learn that capitalism is not the answer.

- Use green stamps.

David - Yeah a US Dollar is now worth the price of
a common US First Class Postage Stamp (39¢).

Thus the once proud US "Green-Back-Dollar" has been
reduced to nothing more then a joke the 'Green Stamp'.

> were strongest in the United States and, from the 1940s, were
> represented by the organisation led by Max Shachtman, which took
> various names before it dissolved into the Socialist Party-Social
> Democratic Federation in the 1950s and rapidly moved to the right. Many
> who held this view came to the conclusion that capitalism had to be
> supported as the lesser evil to bureaucratic collectivism-this
> underlay the support Shachtman and his supporters gave to Washington in
> the Vietnam War. A left split from Shachtman, led by Hal Draper, was
> perhaps the most important tribune for the theory of "bureaucratic
> collectivism" from the 1960s through the present. Today it is
> represented by one section of the US socialist organisation Solidarity.
>
>
> The third theory was Leon Trotsky's; the other two theories were
> developed in opposition to Trotsky's theory. This view held that the
> USSR from Stalin's time on was a highly contradictory society. On the
> one hand, it preserved in a distorted form the main social conquests of
> the 1917 Russian Revolution, including the nationalised and planned
> economy, the state control of foreign trade, and a currency independent
> of the capitalist currency market. On the other, the bureaucracy in the
> government, the Communist Party and the management of industry had
> taken all political rights from the workers and peasants. The USSR was

> a "bureaucratically degenerated workers' state". That is, the
> Soviet Union remained a dictatorship of the proletariat-a regime
> between capitalism and socialism.
>
> What proponents of these three theories had in common-at least those
> who remained partisans of the Russian Revolution-was that Stalinism
> represented a counter-revolution to 1917. The Stalinist terror against
> the best communists and advanced workers, and against the whole working
> class and peasantry, in which millions lost their lives, had the
> function of politically atomising the toiling classes and consolidating
> the totalitarian rule of an economically privileged bureaucracy. In the
> process, the Communist (Bolshevik) Party was smashed and replaced with
> a bureaucratic apparatus. The soviets were similarly transformed. All
> three tendencies called for a revolutionary struggle to overthrow the
> rule of the bureaucracy and re-establish proletarian democracy to keep
> the bureaucracy in check and once again embark on the road to
> socialism.
>
> The sharpest conflicts between these tendencies occurred around the
> question of defending the USSR against imperialism. The second world
> war posed the issue in an acute manner when German imperialism invaded
> the Soviet Union. The followers of Trotsky came out unequivocally for
> the defence of the USSR. Proponents of the other two theories took a
> "plague on both your houses" position. They believed that there was
> nothing left to defend in the USSR. Similar differences were expressed
> following the second world war in relation to Korea, Eastern Europe,
> China, Vietnam and Cuba, and also in relation to the Cold War itself.
>
> Cuba is in a separate category in my opinion. The proponents of both
> the state capitalism and bureaucratic collectivism viewpoints generally
> believe that Cuba is one or the other, and believe that the Cuban
> regime should be overthrown. I do not think that Cuba is Stalinist. I
> think Cuba is a workers state with bureaucratic deformations (as Lenin
> said of the USSR when he was its central leader), and that its
> leadership around Castro is revolutionary socialist and should be
> supported.
>
> Another difference was that those who held either of the first two
> theories thought that the USSR was imperialist.
>
> One of Trotsky's main criticisms of the Stalinists was their
> abandonment of the perspective of world revolution, in favour of
> seeking an agreement with imperialism that would leave the Soviet Union
> alone in return for Kremlin support for capitalism elsewhere through
> its control over the Communist parties. In the 1930s Stalin's line
> against socialist revolution led to defeat in the Spanish Civil War and
> in the French general strike. While socialist revolution was not on the
> agenda in the United States as it was in Spain and France, Stalin's
> line for the US after 1935 was to help corral the new labour
> radicalisation into the Democratic Party. Basically the same policy was

> followed after the war right up to the collapse.
>
> In the aftermath of the second world war, with the development of
> Stalinist regimes in Eastern Europe and in China, North Korea and
> Vietnam, proponents of the state capitalist and bureaucratic
> collectivist theories dropped Trotsky's criticism of the
> Stalinists' essentially conservative line on world revolution, and
> began to see the ussr as the centre of the expansion of bureaucratic
> collectivism or state capitalism into a new evil empire.
>
> Those who supported Trotsky's views defended these extensions of the
> revolution, even in their distorted form. The overturns in Eastern
> Europe were seen as a defensive move by Stalin to set up a buffer
> between the European imperialist countries and the USSR, in response to
> the launching of the Cold War by the West. The "cold" war at any
> point could have turned into an invasion of the USSR, and this outcome
> was prevented only by the "balance of terror" once the USSR
> developed atomic weapons and built its armed forces into a formidable
> counter to NATO.
>
> The overturns in China and Vietnam were seen differently by those who
> held this viewpoint. These occurred through real mass revolutions, at
> the head of which were parties trained in the Stalinist tradition, but
> which decided to lead the mass revolutionary struggle to power in
> opposition to Stalinist conceptions. The mass uprisings played a key
> role in these decisions, and resulted in regimes that had different
> dynamics than those in Eastern Europe.
>
> All these differences were thoroughly documented and debated in the
> decades before the collapse of the Soviet bloc. The purpose of this
> article is not to rehash those debates, but to take a fresh look at
> these three theories in the light of the collapse. Those interested in
> learning about those debates can consult the literature.
>
> A striking feature of the attempt to restore capitalism (or go back to
> "ordinary" capitalism for those who hold the state capitalist view)
> in the republics of the former USSR and Eastern Europe is the way in
> which privatisation of the nationalized industries has occurred. Key to
> this has been the scarcity of capital, noted by virtually all
> commentators.
>
> In an important article, "The Necessity of Gangster Capitalism:
> Primitive Accumulation in Russia and China", Monthly Review, February
> 2000, authors Holmstrom and Smith point out, "The nomenklatura
> collectively monopolized control of the means of production [in the
> USSR] but they did not own them privately. The [new capitalist] class
> had to be created." Referring to Jeffery Sachs, one of the Harvard
> economists who advised the Russians to embark on wholesale and rapid
> privatisation after the collapse, they write:
>

> Sachs's protocols for the transition contain no discussions of robber
> barons or gangster capitalists. Fetishizing an abstract ahistoric
> model, Sachs imagined that once prices were freed, once private
> enterprise was legally permitted, "capitalists" would somehow
> appear, stride forth, and take command of the economy. But where were
> those capitalists to come from? In 1990, no one in Eastern Europe or
> Russia had significant monetary wealth or private property in the means
> of production. There was no bourgeoisie-not even a pre-revolutionary
> bourgeoisie to give the economy back to. As the joke went in Poland,
> "What were they to do-give the Lenin shipyards back to the Lenin
> family?" So no one had the means to buy the factories, the mines, the
> forests, the collective farms, or to hire labour.4
>
> Further, Holmstrom and Smith point out, capitalists
>
> ... had to be created. Individuals had to take possession, privatize
> property, factories, mines, wells, and forests. But since no one had
> the money to buy these state properties from the government, there was
> no feasible way this could be done legally, legitimately, or morally
> ... This class had to be hothoused, virtually overnight. And it was. In
> the end, a combination of elements of underground mafiosa, the
> nomenklatura, especially the top management of certain industries, and
> segments of the intelligentsia-these people were essentially drafted
> to privatize the economy criminally.5
>
> In other words, there weren't enough owners of sufficient capital to
> be able to buy up the formerly nationalised industries. What does this
> mean for the theory that these countries were state capitalist? If the
> words "state capitalist" mean anything, it is that in the USSR
> capital accumulation should have been taking place as in every other
> form of capitalism. Since this capital accumulation had been going on
> for decades, presumably, quite a mass of capital should have been
> generated, and it should have been in the hands of real people. Since
> in the theory of state capitalism the bureaucracy collectively
> exploited the working people on a capitalist basis, at least a section
> of the bureaucracy should have amassed enough capital to buy up the
> nationalised industries. But it turns out that that was not true. The
> bureaucrats clearly were not capitalists of any variety, because they
> didn't accumulate capital on the scale that would have happened if
> the society functioned on the basis of capitalist accumulation. They
> are scrambling to become capitalists in the new situation-to become
> something they were not before. And they are trying to do it without
> sufficient capital beforehand, hence the theft. The theory of state
> capitalism collapses in the face of this reality.
>
> The theory that the USSR was bureaucratic collectivism held that the
> bureaucracy had become a ruling class of a new type. It exploited the
> workers and peasants, but in a new way, not seen before. It wasn't
> capitalist and the society didn't function on the basis of capitalist
> accumulation.

>
> According to proponents of the bureaucratic collectivist theory, Marx
> and his followers were wrong in thinking that the choice before
> humanity was capitalism (which would degenerate into barbarism if it
> were not overthrown) or socialism. The history of the Soviet Union and
> similar societies, they felt, showed that a third outcome was possible,
> and that this new society had some very unappealing features, such as a
> bureaucratic totalitarian dictatorship.
>
> How does this theory stack up against the historical reality of the
> collapse of the USSR?
>
> This theory suffers from the same problem that the theory of state
> capitalism does, for even though it held that the bureaucracy did not
> exploit the working people on a capitalist basis, it did exploit them.
> Why then isn't there the "bureaucratic collectivist" wealth on a
> scale large enough to be turned into capital to privatise the economy?
>
> The main feature of the collapse of the USSR has been the turn of the
> ruling bureaucracy toward capitalist restoration. That is, they are
> trying to abolish the system they grew up under (the first Soviet
> bureaucrats are all dead), the very system under which these
> bureaucrats garnered their privileges. Isn't this one of the more
> curious developments in history?
>
> If the bureaucracy were a ruling class of a new type, which arose on
> the basis of the overthrow of capitalism, its obvious desire to
> transform itself into a new capitalist class would be very odd indeed.
>
> Even if we assume that the bureaucratic collectivist theory was correct
> for the USSR, the collapse of this system, and the desire of its ruling
> class of a new type to become a capitalist ruling class, demonstrates
> that this system was not historically viable, and its ruling class
> itself has come to this conclusion. The ruling class of a new type no
> longer wants to exist!
>
> The time from the rise to power of Stalinism in the USSR to its fall
> was some six decades or so. That is not long from a historical
> perspective. So the "third way", even if it existed for a brief
> time, was never a viable new form of society. Historically speaking,
> the collapse of the USSR proves that there is no basic third
> alternative to capitalism or socialism.
>
> Marx was right.
>
> Holmstrom and Smith argue that Russia has had to go through a stage of
> primitive accumulation of capital, similar to that at the rise of
> capitalism, in order to restore that system. They also point to the
> necessity for the other class that must come into existence for
> capitalism to function, the propertyless proletarians. In the USSR,

> they write:
>
> Russian workers certainly did not own the means of production, but they
> did, and many still do, in a real sense "own" their jobs. They had
> long-established rights to housing, state-provided medical care,
> childcare and numerous subsidies from the state. These social property
> rights are being destroyed in the process of transition to a
> "normal" market economy. Divested, "freed" from control,
> possession, or ownership of means of production, the majority of people
> of the former Soviet Union are forced to come to the market with, in
> Marx's words, "nothing to sell but their skins."
>
> In other words, labour power has become, or is becoming, once again a
> mere commodity in the newly created market. The results of the
> transition, Holmstrom and Smith point out, have been "an unmitigated
> disaster. In the first year of the reform, industrial output collapsed
> by 26 percent". This was far worse than the few percentage points
> drop in the last years of the USSR.
>
> Between 1992 and 1995, Russia's GDP fell 42 percent and industrial
> production fell 46 percent-far worse than the contraction of the US
> economy during the Great Depression ... Since 1989, the Russian economy
> has halved in size, and continues to drop. Real incomes have plummeted
> 40 percent since 1991; 80 percent of Russians have no savings. The
> Russian government, bankrupted by the collapse of economic activity,
> stopped paying the salaries of millions of employees and dependents.
> Unemployment soared, particularly among women. By the mid to late
> nineties, more than forty-four million of Russia's 148 million people
> were living in poverty (defined as living on less than thirty-two
> dollars a month); three quarters of the population live on less than
> one hundred dollars per month.6
>
> They go on to list the drop in life expectancy, the rise in suicides
> and alcoholism, increased abandonment of children and similar social
> indicators.
>
> Clearly, the transition to capitalism has been a human catastrophe from
> the point of view of the workers. How do the supporters of the state
> capitalism and bureaucratic collectivism theories explain this? Was
> state capitalism or bureaucratic collectivism superior in some aspects
> to capitalism? What were those aspects? Weren't things like job
> security, pensions, free health care, subsidised housing and free
> education, based upon the nationalised and planned economy and other
> social conquests of the revolution which weren't eliminated until the
> headlong drive toward capitalist restoration-the very things those
> who held to Trotsky's theory thought were worth defending?
>
> Let's turn now to Trotsky. In 1938 he summed up the prospects for the
> USSR:
>

> The Soviet Revolution emerged from the October revolution as a
> workers' state. State ownership of the means of production, a
> necessary prerequisite to socialist development, opened up the
> possibility of rapid growth of the productive forces. But the apparatus
> of the workers' state underwent a complete degeneration at the same
> time: it was transformed from a weapon of the working class into a
> weapon of bureaucratic violence against the working class and more and
> more a weapon for the sabotage of the country's economy. The
> bureaucratization of a backward and isolated workers' state and the
> transformation of the bureaucracy into an all-powerful privileged caste
> constitute the most convincing refutation-not only theoretically but
> this time practically-of the theory of socialism in one country.
>
> The USSR thus embodies terrific contradictions. But it still remains a
> degenerated workers' state. Such is the social diagnosis. The
> political prognosis has an alternative character: either the
> bureaucracy, becoming ever more the organ of the world bourgeoisie in
> the workers' state, will overthrow the new forms of property and
> plunge the country back into capitalism; or the working class will
> crush the bureaucracy and open the way to socialism.7
>
> Isn't the first alternative exactly what is happening? Sections of
> the bureaucracy began to be attracted to the West. The more privileged
> layers of intellectuals-scientists, engineers, artists and so
> forth-looked with longing at their counterparts in the advanced
> capitalist countries, who had more freedom and better lives than they
> did. The same was true among managers in the state enterprises. The
> official state ideology that the USSR was a classless society, without
> a privileged bureaucracy, was so at variance with the bureaucratic
> reality that the privileged themselves became cynical. They no longer
> believed in socialism, even as a far-off goal. We need only reflect
> that Yeltsin was a member of the Political Bureau of the Communist
> Party of the Soviet Union to see what an anti-communist outfit it
> really was.
>
> But most of these things had been true for some time, decades in fact.
> What happened to finally lead the bureaucracy to take the plunge toward
> the restoration of capitalism? I think that to answer this question it
> would be useful to look at some of the shortcomings among those who
> supported the theory of the bureaucratically degenerated workers'
> state.
>
> The horrors of the Nazi invasion in the second world war were countered
> by a great mobilisation of the Soviet people. Through immense sacrifice
> (some 20 million dead) they stopped and then smashed the German war
> machine. Following the war, another great mobilisation of the Soviet
> people occurred in the rebuilding of the country. The inherent power of
> the planned economy in furthering both these achievements was clear and
> understood by the Soviet masses.
>

> In the postwar period, the isolation of the USSR was partially broken.
> The revolution was extended into the countries occupied by Soviet
> troops in Eastern Europe, although in a very bureaucratic and
> controlled way, in reaction to the West's unleashing of the Cold War.
> The Chinese Revolution was a massive breakthrough. The upsurge in the
> colonial world as a whole brought new nations into at least friendship
> with the USSR and its bloc. While there were no breakthroughs of the
> revolution in the imperialist West, which would ultimately be decisive
> in the collapse, it appeared to many that history was on the side of
> the USSR.
>
> The leadership of the US Socialist Workers Party and of the United
> Secretariat of the Fourth International came to the conclusion that the
> alternatives proposed by Trotsky in 1938 had been bypassed. I was a
> part of those leaderships and thought so too. While this view was not
> explicitly written down, our documents just dropped the alternative
> possibility of capitalist restoration. We thought that the working
> class had grown strong enough, and socialist consciousness was deep
> enough, that the bureaucracy couldn't possibly overthrow the
> nationalised and planned economy. The achievements of the planned
> economy were impressive. In spite of its backwardness, the Soviet Union
> had been able to develop a powerful military that held imperialism in
> check. The USSR had the atom bomb. Science in the Soviet bloc took big
> strides forward, as did basic education and the arts. China and North
> Korea had fought Washington to a stalemate in the Korean War. We
> thought that the working class had grown strong enough, and socialist
> consciousness was deep enough, that the bureaucracy couldn't possibly
> overthrow the nationalised and planned economy.
>
> We of course knew that the planned economy was warped by the fact that
> it was the bureaucracy that did the planning, and could not reach its
> full potential without the input of the workers, which was impossible
> without workers' democracy. But we failed to give sufficient weight
> to something that Trotsky had pointed out: that bureaucratic planning
> could have successes, even some big successes, as long as it was
> copying techniques of mass production developed in the West. "It is
> possible to build gigantic factories according to a ready-made Western
> pattern by bureaucratic command-although, to be sure, at triple the
> normal cost", he wrote in 1936.
>
> But the farther you go, the more the economy runs into the problem of
> quality, which slips out of the hands of a bureaucracy like a shadow.
> The Soviet products are as though branded with the gray label of
> indifference. Under a nationalized economy, quality demands a democracy
> of producers and consumers, freedom of criticism and
> initiative-conditions incompatible with a totalitarian regime of
> fear, lies and flattery ... Soviet democracy is not the demand of an
> abstract policy, still less an abstract moral. It has become a
> life-and-death need of the country.8
>

> The result of the lack of socialist democracy was that by the 1970s,
> the Soviet economy stagnated, and then actually contracted a bit, for
> the first time since the second world war. More far-sighted people in
> the bureaucracy began to see that more openness and transparency in
> society and in economic planning were necessary. Among the masses,
> especially in Eastern Europe but also in the USSR, there were movements
> toward more democracy. The successes in the USSR and in Eastern Europe
> in the field of education and industrialisation meant that working
> people and the middle layers were far above the cultural level of the
> masses of the USSR when Stalin consolidated the power of the
> bureaucracy in the late 1920s. This process culminated in Gorbachev's
> campaign for glasnost and perestroika.
>
> Gorbachev's proposals went in the direction of introducing gradually
> aspects of bourgeois democracy, not workers' democracy. That is, his
> proposals didn't go in the direction of empowering the workers and
> peasants to democratically run their enterprises, or to reviving the
> soviets as real workers and peasants committees to democratically run
> the government and the economic plan.
>
> Undoubtedly, Gorbachev's campaign was welcomed not only by the more
> far-seeing sections of the bureaucracy, but by the Soviet masses as
> well, who wanted to break out of the stifling bureaucratic straitjacket
> and achieve more democratic rights and democratic functioning of the
> government. These aspirations were progressive and had to be supported.
>
>
> Under Gorbachev, central control over economic administration was
> dismantled, but it was not replaced by popular control from below. The
> result was that the centre became powerless. It turned out that the
> relaxation of the bureaucracy's totalitarian control over political
> debate, information and activity led to calling into question the power
> and privileges of the bureaucracy itself. The Gorbachev reforms failed.
> The only way to preserve the bureaucracy's privileged access to
> consumer goods and services, in the face of the disintegrating
> "command" system, was to "go legit" and link those privileges
> to private property.
>
> Another centrifugal force was national oppression in the Soviet Union.
> One of the features of the Stalinist counter-revolution was the
> reversal of the Bolshevik position supporting national
> self-determination for the oppressed nationalities under tsarism.
> Lenin's last fight against Stalin revolved around this question.
> Stalin reintroduced Great Russian chauvinism and national oppression.
> As the totalitarian grip was relaxed under Gorbachev, the USSR's long
> oppressed national minorities began to demand their rights, which led
> to the plans to hold a referendum on the continued existence of the
> Soviet Union itself. These plans led to the abortive coup attempt
> against Gorbachev, the mass resistance to it, the collapse of the USSR
> and Yeltsin's initial popularity, which he utilised to begin the

> transformation to capitalism.
>
> How could the bureaucracy embark on this road without unleashing a
> civil war? When Trotsky outlined the two possible political outcomes
> for the USSR in 1938, he thought that either course would entail a
> violent struggle. In 1938 this was undoubtedly true. Among the workers
> were still the generation of 1917. The great majority of the population
> believed in socialism, even though they chafed under the yoke of the
> Stalinist dictatorship.
>
> It is clear now that the consciousness of the Soviet working class in
> 1989 was not as it was in 1938 in spite of the Stalinist terror. After
> 40 more years of stultifying bureaucratic rule, socialist consciousness
> had ebbed, especially in the context of the economic difficulties the
> Soviet Union was facing. Moreover, there was no political party that
> stood for the rebirth of the Soviet Union on the basis of Leninism,
> unlike in 1938, when there were still tens of thousands of
> Bolshevik-Leninists alive, even if they were in prison. The living link
> of cadre going back to the revolution had been lost. The workers were
> politically leaderless.
>
> Thus the counter-revolution, begun back in the 1920s when the
> bureaucracy usurped power, reached its culmination in the
> bureaucracy's project to restore capitalism, and this happened
> without a civil war.
>
> But the process has not been without resistance by the workers. There
> have been regional and local strikes and demonstrations, some that have
> resisted police violence. There are indications that worker resistance
> is becoming more organised, but it has yet to take on a nationwide
> character.
>
> I have left out the parallel and intertwined developments that were
> occurring at the same time in the countries of Eastern Europe. For a
> more complete picture, they should be included. But here I want to note
> only certain aspects of the history of Eastern Europe after the second
> world war.
>
> With the exception of Yugoslavia, the social transformations in these
> countries were carried out under conditions of occupation by the Soviet
> army. To be sure, workers were mobilised to support the overthrow of
> capitalism, but in a tightly controlled way. Stalin so feared that
> things might get out of hand (as later happened with regard to China)
> that he arrested and shot his loyal followers who were at the heads of
> the local Communist parties. So in addition to the imposition upon
> these countries of Stalinist regimes along with the social
> transformation, these regimes were very weak, and depended on Soviet
> troops, who were seen as foreign occupiers. This was one of the reasons
> there were real attempts to break out of the Stalinist straitjacket in
> Eastern Europe and not in the Soviet Union in the postwar years.

>
> The first of these was the 1953 worker uprising in East Germany. It was
> suppressed by Soviet troops, but forced some economic concessions from
> the Kremlin. In Poland in 1956 and in 1970, there were powerful mass
> movements for socialist democracy that the bureaucracy was able to
> coopt over time with the threat of Soviet troops in the background.
>
> The Hungarian Revolution of 1956 succeeded in toppling the bureaucratic
> regime. The army went over to the side of the workers, and the secret
> police was smashed. A government led by the liberal Communist Imre Nagy
> came into power, which included old time socialists. This was only a
> decade after the end of the second world war. Hungarians remembered
> vividly the Nazi occupation and that particularly horrible form of
> capitalist rule. The new government pledged to preserve the social
> gains of the workers' state, but to introduce democracy. Soviets
> (councils) of workers, soldiers and peasants appeared. If this
> development had been allowed to continue and a democratic workers'
> state had been established, this would have had a profound impact on
> the rest of Eastern Europe and the Soviet Union itself. The Kremlin
> felt mortally threatened, and moved to crush the uprising with tanks.
>
> Similarly, when the "Prague spring" erupted in Czechoslovakia in
> 1968, under the slogan of "Socialism with a human face!" the USSR
> again invaded.
>
> I think the last effort to democratise one of the workers' states on
> a socialist basis in Eastern Europe was the upsurge of the Solidarity
> trade union in Poland. Solidarity's 1980 program, adopted after long
> debates in the workplaces, would have led to a working class and
> egalitarian government on the basis of retention of the nationalised
> and planned economy. The imposition of martial law to suppress
> Solidarity, with the threat of a Soviet invasion in the background,
> seems to have been the last straw to break the back of hope for
> socialist renewal in Eastern Europe. Solidarity itself split and
> disintegrated, and what later emerged as "Solidarity" had lost the
> spirit and content of the 1980 program.
>
> When the mass movements for democracy erupted in Eastern Europe at the
> end of the 1980s, pro-capitalist elements were able to take the
> leadership. While these mass movements for democracy were progressive
> and had to be supported by Marxists, they were unable to move toward
> socialist democracy.
>
> In both the former Soviet Union and Eastern Europe, nationalism and
> racism have flared, including into wars. At bottom, the failure of
> these bureaucratised workers states to solve the many national
> questions throughout the region, and their perpetuation of national
> oppression, is at fault. To this we must add the Stalinist turn away
> from internationalism, with a resultant increase in xenophobia and
> outright racism. Black socialists from the US who travelled to Eastern

> Europe in the 1980s reported they felt the racism. The turn to
> capitalism, with its attendant negative impact on the welfare of the
> workers, rising unemployment and so forth, is creating new fertile
> ground for racism, and it has exploded far beyond what it was before
> the collapse.
>
> We have also seen sharp blows dealt to women since the turn toward
> capitalism. The Stalin counter-revolution also reversed Bolshevik
> policy in this field. While the Bolsheviks weren't able to realise
> their program of the gradual socialisation of domestic labour due to
> the poverty and devastation of the country, the Stalinists once again
> placed the burden of such labour on the backs of women in fact and in
> theory, in their program. But still there were gains in health care,
> care of the aged, education and employment for women in these
> bureaucratised workers' states. The turn towards capitalism has
> caused unemployment among women to soar, prostitution to become rampant
> and sexist ideology to flourish.
>
> The transition to capitalism in Eastern Europe has not been as
> catastrophic as in Russia, but it too has been marked by great losses
> for the working class. Workers in both the republics of the former USSR
> and Eastern Europe remember the social conquests they used to take for
> granted. They will resist more and more what the transition to
> capitalism is bringing and will bring down upon them. It is through
> these struggles that socialist consciousness can once again emerge, and
> new revolutionary socialist parties built. The workers of the former
> USSR and Eastern Europe know they do not want to go back to Stalinism.
> They are learning and will learn that capitalism is not the answer.

Yep, I think you're right there Bart. Big relays tho so probably for
send and receive. My first thought after seeing all those beads was
that it was a rosary chain for praying, but I don't think they come in
shiny cases.

Yep and probably fresh out of one of the ARRL handbooks. It's a nice build.
I'd have faith in it.

"""

Alas, It ain't so simple. The finest scientific minds of our time have
been unable to come up with a theory that can be proved by experiment.
Current theories include:
- evaporatve cooling
-convection
-dissolved gases
-surrounding environment

The finest scientific minds of our time fool around with experiments
for a while, find that they cannot isolate the variables, and go back
to their lucrative defense dept contracts where things go boom and life
is much simpler.
Aristotle noticed the freezing effect around 350bc but not much was
known about scientific method then and his deduction worked for him.
The modern name for the phenomena is "the Mpemba effect" after an
African student who found that he could freeze hot milk faster than
cold milk. (to make ice cream)

For those who have way too much time on their hands Google
<Why do hot water pipes freeze before cold water pipes?>
You will get 1,100,000 hits.

For those with limited time an instructive article from Physics Web
"Does Hot Water Freeze First?"
can be found at:
<http://physicsweb.org/articles/world/19/4/4>

A scholarly article," Hot water Can Freeze Faster Than Cold?!?", can be
found at:::
<http://arxiv.org/ps_cache/physics/pdf/0512/0512262.pdf>

This would be a great subject for a science project or even a Phd
thesis.

> Sorry to hear about the difficulty!

The IRCs are often useless to the recipient. I recall in 1963 when I answered over 100 reception reports of HJED in Cali, Colombia, that the engineers had hundreds of IRCs, unused. They said that it was hard or impossible to exchange them, so they just stuffed them in an envelope.

In Ecuador, where stamps were sold at private Kiosks outside th epost office, it was essentially impossible to do an exchange for postage.

It's probably better to send nothing than an IRC except to established international broadcasters who know how to deal with them.

<snips>

The key to all of these is that there is something about both fluids,
apart from temperature, that is not equal.

If you have two identical, equal water fluids whose only difference is
temperature, I would bet good money that the cold one will freeze first
- it simply has to lose a lot less energy to get to the phase change.

I think the best experiment would be not to avoid the presence of
nucleation sites, but to make sure that each vessel has a roughly equal
load of them, guaranteeing that freezing would occur as soon as
possible for each one (just like in nature, where nucleation sites are
abundant).

stated for best case condiction 2-5 i would normaly

this is why in the ARS reeaters play such a vital funtion iworking
with units of similar power since I have 300mw 70 cm ham unit (just
before FRS and of similar power to FRS) and yet I can reach a repeater
2'5 mile from that is high and baove much obstructions and therby
reach everbody else using the same repater

The midland LXT300 is a GMRS radio -- it CAN NOT be used for Ham Repeaters.
Only GMRS repeaters

OK so you want a QSL {Radio Station Heard Confirmation Recept}
from a Foreign Radio Broadcaster for your QSL Collection and you
need an International Reply Coupon (IRC) . - - - IRC What ?

ABOUT - The International Reply Coupon (IRC) - {In-Search-of a QSL}
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/11941

First -About- The QSL and The QSL Card :
In-Search-of "That" Distant Radio Station Report 'Confirmation'.
QSL => http://en.wikipedia.org/wiki/QSL
QSL CARD => http://en.wikipedia.org/wiki/QSL_card
QSL gerally means either "Do you Confirm Receipt of my Transmission"
-Or- "I Confirm Receipt of Your Transmission"'.
For the Shortwave Listener (SWL) the "QSL" is a Radio Station's
Written Report {Card} of Confirmation of being Heard by the
Shortwave Listener (SWL) based upon the SWLs report to
that Radio Station.

Shortwave Listener (SWL) QSL Card Museum
SWL QSL CARDS => http://www.antique-corner.com/SWLQSL/

The "eQSL" - The Electronic {internet} QSL Card
eQSL => http://www.eqsl.cc/qslcard/Index.cfm

About - QSL Cards -via- EHam
http://www.eham.net/newham/qslcards

FWIW - Amateur [Ham] Radio Glossary Jargon, Abbreviations
and Terminology => http://www.ac6v.com/jargon.htm
Note Caution : This is an informal listing of Ham Jargon -
- Based on th 'opinions' of AC6V Only.
- - Not to be used as a definitive source.
- - - Caveat Lector - Reader Beware ! - Applies as in all things.

Now =ABOUT= The International Reply Coupon (IRC)

International Reply Coupon (IRC)
http://en.wikipedia.org/wiki/International_Reply_Coupon
The International Reply Coupon (IRC) is a Coupon that can be
used to Post a Standard 20 Gram Letter anywhere in the world.
IRCs are accepted in all Universal Postal Union (UPU) member
countries.

NOTE - A UPU Member Postal Service is Obliged to Exchange
an International Reply Coupon (IRC) for Postage
- - -but- - - Is NOT Obliged To Sell IRCs.

NEWS - As of 2006 an IRC is Exchangeable in an UPU Member
Country for the Minimum Postage of a Priority or Un-Registered
Airmail Letter to a Foreign Country.
- - - So in the USA the Price of an IRC would be about $4 - Ouch !

The Universal Postal Union (UPU)
http://en.wikipedia.org/wiki/Universal_Postal_Union
French : Union Postale Universelle)
Is the International Organization that Coordinates Postal Policies
between member Nations, and hence the World-Wide Postal System.

What is an International Reply Coupon (IRC) ?
http://www.n6hb.org/s-a/irc.htm
-by- Bob Wilson [N6HB]
New(er) International Reply Coupons (IRCs) :
A new International Reply Coupon (IRC) by the Universal
Postal Union has been issued and available for sale at
all Post Offices as of 1 September 2006. These 'newer'
IRCs are Exchangeable till 31 December 2009. These
'newest' IRCs also have a new look : Two Fingers about
to Touch, Framed in a Postage Stamp, this Image inspired
by the famous Michelangelo work adorning the Sistine
Chapel ceiling - Symbolizes the Notions of Communication
and Exchange that the International Reply Coupon represents.

Newer IRC PRICES - IRCs currently cost $3.50 in Canada
and $1.85 in the United States.

Newer IRC Image - http://www.mwcircle.org/irc.htm
- - - Welcome to the Medium Wave Circle
MWC => http://www.mwcircle.org/index.htm

FINALLY - What does the US Postal Service (USPS) have
to say about the : International Reply Coupon (IRC)
IRC => http://pe.usps.gov/text/pub51/pub51_022.html
International reply coupons (IRCs) provide foreign addressees with a
prepaid means of responding to inquiries, solicitations, or other types
of communications that are initiated by U.S. senders. IRCs are
exchangeable for postage stamps by postal administrations in member
countries of the Universal Postal Union (UPU). Each IRC is equivalent
in value to the destination country's minimum postage rate for an
unregistered airmail letter. The purchase price is $1.85 per coupon.

USPS Publication 51 - International Postal Rates and Fees
Basic Document Issued : March 2006,
Updated with Postal Bulletin Revisions through January 4, 2007
PUB 51 => http://pe.usps.gov/text/pub51/welcome.htm

1963? You certainly were busy that year! Between going to school in Ohio (being only 17), spending nearly the whole year in Mexico, and working at a USA radio station when Kennedy was shot... you still had the time to bop down to Colombia and fill out a few QSL's.

Amazing!

After my internship in Mexico, I spent several months bussing through
Central America, as well as Colombia and Venezuela. A few pictures are on my
website... including the changing of a flat tire on the engineering vehicle
along the Cali to Buga highway!

Among the things I did included visiting stations and requesting veries for
NRC members with outstanding reports.

When I was in Cali, at La Voz del R�o Cauca, I was shown a stack of
unanswered DX reports. As South America's only directional medium wave
station at the time, HJED got hundreds of US reports in overnights when
WFFA/WBAP on 820 was / were off the air. I volunteered to answer the reports
and spent a day typing them; the engineer signed and mailed them all! Many
DXers still have these veries in their collections, in fact.

This week I sold all of my old vehicles (except my 1914 Model T Ford and that car is sitting in my old shed in my back yard,I won't part with that car for love or money) I had sitting in my back yard to an old guy by the name of Bill Worthy in Summit,Mississippi.A friend of his by the name of Charlie was here too.Both of those old guys are about eighty years old.(they are not gay and neither am I) My gawd,the way old Charlie was talking about those old wimmins!

Bill and Charlie showed up here at about noontime,Bill put a new fuel pump on the 1975 Chevrolet big ex-bread truck van I sold him and messed around with the brakes.At about 2:30 PM this afternoon,Bill was hauling arse up the street with Charlie following behind in Bill's pickup truck heading on back to Summit,about eighty miles South of Jackson.I wasen't doing anything with those old vehicles anyway except using them to store some old junk which I am to get rid of too.I want to get my back yard looking like a back yard is suppose to look like.I might even plant a garden back there.

1146. Our assignment was to find out how many people were still listening to the shortwave service

Newsgroup: rec.radio.shortwave
Date: 2007-01-12 22:42:50 UTC
From: "http://www.lookaboutusa.com/" <nswamfm@yahoo.com>
Message-ID: <1168641769.311475.68190@51g2000cwl.googlegroups.com>
Source record: 103145

In the mid-1990s, I received an unusual assignment from the Australian Broadcasting Corporation. They had a short-wave station in Western Australia, which repeated the local radio program from Perth, the capital of that state. Western Australia is huge - bigger than most countries of the world: it's about 2000 kilometres square - but much of it is near-desert, and uninhabited. The population of the state is about 1.5 million, and almost 90% of those live either in Perth, or the coastal areas in the south-west of the state. Most of the rest live in 20 or 30 small towns, all of which have an FM repeater station. Less than 10,000 people lived out of range of an AM medium-wave or FM station.

The short-wave station was intended for people living in remote areas. But most listeners hate listening to short wave radio, and will do it only if there's nothing better. The same program had been broadcast on satellite for at least 5 years, and though satellite receivers are expensive, many people in remote areas of W.A. had bought them.

Our assignment was to find out how many people were still listening to the shortwave service.

Given the tiny, scattered population, we figured that many of them might know each other. Some of them lived on large farms ("stations" as they call them in that part of the world), and others in aboriginal communities. Using a CD-ROM of all published phone numbers in Australia, we found less than 1,000 in these remote areas.

We decided to use a snowball sampling system: to ask each respondent if they could name any others who were out of reach of normal radio. We had maps showing signal strength, but didn't completely believe them. Officially, if the AM signal strength is less than 0.5 millivolts per metre, it's not usable. In fact, we found people listening to AM with far lower signal strengths than this. Visiting some "stations" we heard AM radio that, to us, was unintelligible. But people who'd been listening to it for years could understand it quite well during the daytime. At night, there was so much interference that listening was impossible; the best signal was often soon after dawn.

We found almost nobody who listened to the shortwave service, and many people who complained of poor AM signals didn't even know the shortwave service existed - even though it had been around for decades.

On the basis of the surprisingly large AM audience, and the high percentage of outback people with satellite receivers (about $5,000 each) we saw no reason why the short wave service shouldn't be closed

down. When the transmitters were built, around 1945, they were on the outskirts of Perth. By 1995, they were in the middle of a suburban area, and the land had become very valuable.

Eventually, the shortwave transmitter was closed down. Complaints flooded in, from people we hadn't found in our survey: crews of ships in the Indian Ocean, and mining and prospecting workers with short-wave radios in their 4-wheel-drives. Even if we'd known those listeners existed, we couldn't have selected them with our sampling frame of Western Australian phone numbers.

The transmitters weren't opened up again - there was too much money at stake for that. But this experience taught us not to underestimate the mobile listeners. How to find them - given that many had their homes in Perth - was quite another matter.

- Dennis List

Ummm... why didn't you broadcast a message over the shortwave radio service
asking listeners to report in? It is, after all, a communications medium,
is it not?

from Yahoo:
"...for such a seemingly simple substance, water is surprisingly
complex, and its behaviour is poorly understood. The Mpemba effect is
just one of 38 anamolies of H2O."

Experiments to examine any theory have to contend with an enormous
number of variables.
A paper from London South Bank University examines a few anamolies. Do
not miss "icosahedral water clusters" at the bottom of the page.

I tried one out in The Source and found it tuned in 5kHz steps in SW.
There is no way to off tune to dodge interference. The criticism of
the bright LED are correct . They could drill holes in your eyes in a
dark room. Easy solution would be to put a dab of paint on them.
Bob

I've thought of this too, and it is very tempting - but taken by itself
it violates the law and concept of "flux is proportional to the
gradient," and so I have to ween myself off the impulse.

Thank you for sharing cuhulin, very interesting.We need more posts
like yours - folksy, informative and amusing with a dash of country
common sense. This is why I like this newsgroup so much better than any
other - the homey, chatting across the backyard fence type of
atmosphere. Anyway, I am getting all gushy now so I better sign off
before I tear up. Thank you for being you!

1157. 17.525 MHz Help t ID Relig. Station

G'day All,

Passport to WRB and "http://www.primetimeshortwave.com/freql.txt" does
not have a listening for this. The male preacher is talking about how
IRAQ is failing and how he believes WW3 has already started.

I have this signal with some fade at S43

A quick google has the frequency belonging to Family Radio
"http://worldwide.familyradio.org/zusa/international/schedules/englishsched.html"
but slotted for a different time slot for the english service for this
frequency

hahahahahaha Bugger Me is this Preacher bloke for real ?

Regards
Mark

I used to listen to VLW-9 on 9610 from Perth. It was regularly heard in
the early morning in the USA. Was this one of the stations?

This is not a good design. You need to isolate the relay control wiring
from the RF transmission lines. Because they are in the same space is
why the control wiring has all the ferrite on them. Mr. Smith would have
used opto-isolators here. Ha ha.

I had the same thing happen here a year or so ago. Seems it was (or is) a glitch in their computer system. Gal went in the back real quick, got a manual, and figured out which keystrokes would allow the IRC's to be sold through their system.

Bingo, they scanned properly.

Hello:

I understand that fm signals in the 150 MHz and higher range propagate
pretty much as line of sight.

But, is this also true for AM signals in this frequency range ?

Thanks,
Bob

This is generally true during hours of daylight. Medium wave signals
bounce off the ionosphere after dark thus allowing for long distance
reception.

Message-ID: <2N5qh.19753$yC5.15656@newssvr27.news.prodigy.net>
Source record: 103174

I recall one time when I was you we went camping overnight and each of us brought a clear glass gallon of water. The jugs were left outside the tent on the ground. That night we had a pretty good freeze. I was first up and went to get take a leak and get a drink. I could see that the water hadn't frozen. So I picked up a jug opened it and hoisted it to my mouth and to my amazement the water froze in an instant. The other jug didn't. One was city tap water and the other was from a well and I can't recall which was which. I recall reporting the phenomena in grade 9 science and we found out about supercooled liquids. A very interesting phenomena when you consider that the jug that freezes nearly instantaneously has to give up a bunch of latent heat. Since then I've seen that happen with beer thats been in the freeze but its not as dramatic because they all do it and you can't see as well, and there's many more other things in solution lke alcohol,etc.

> I understand that fm signals in the 150 MHz and higher range propagate
> pretty much as line of sight.

Yes. (there is some limited refraction)

> But, is this also true for AM signals in this frequency range ?

Yes.

It's the frequency of the signal that determines what path that signal will follow to get from Point A to Point B. Signals on nearby frequencies will follow the same path.

So, a "dead air" signal - a pure, unmodulated signal carrying no intelligence - transmitted on 150MHz will cover a given path. If you adjust the transmitter to 149.9MHz, the signal will cover the same path; likewise if you adjust it to 150.2MHz.

Now, if you put some information on this signal... if you use FM, the information - the voice, or data, or whatever - causes the frequency of the signal to vary between limits. Say, between 149.95 and 150.05MHz. The signal will cover the same path as it did when it wasn't carrying any information at all.

If you use AM instead... the signal will still spread out near 150MHz. It'll spread out over a narrower range, maybe between 149.995 and 150.005MHz. Still, since the frequency at any given moment is still pretty close to 150MHz, the signal will follow the same path.

"""

I noticed that CBW, 990, Winnipeg, on the other side of the front at the time, was unusually strong, leading me to wonder if weather could be a factor in mw and sw propagation. The effects of the ionosphere have been well documented with ducting reported down to 40 mhz but not so much data has been collected re weather effects, if any.
The AM band radio reception seems affected by factors other than the ionosphere. Observation seems a good place to start. I have an impression that reception is better on the warm side of the front. Other stations noted were Calgary 1010, on the other side, but not Denver 850, KOA, on the same side, which usually comes in about s-5. This is not short wave, but it is easy to take a quick look at the bands to see if there is any effect.

> But, is this also true for AM signals in this frequency range ?

Yes, it is true. The modulation of a signal doesn't matter much when considering VHF propagation. In fact, as a private pilot, I use AM on the air all the time. Signals from 108 to 136 MHz are sent using AM (108 to 118 MHz are mostly Navigation beacons, though sometimes the navigation beacons do double service as outbound transmitters from Flight Service Stations).

Most of what I hear is line of sight. From several thousand feet or more, line of sight can cover a lot of ground. A meager 10 watt signal from an airplane is routinely heard over distances greater than 100 miles.

However, ground stations usually have special antennas that direct the power away from the horizon and skyward. That's why it's difficult to hear airport towers from more than a few miles away on the ground. The aircraft, however are easy to hear. It's quite normal to hear only the aircraft, and not the controllers or the tower.

Oh definitely so! A 5-watt UHF HT with a half-wave antenna can't even make
it 25 miles simplex. I can't see how Cobra and the other manufacturers can
make such claims with power outputs below 1 watt and a unity-gain antenna.

I compared it to the Grundig 100 Mini PE... No contest, the Grundig has MUCH better sensitivity on shortwave (and at that point, was less expensive than the RS). I didn't bother doing any other comparisons and just returned the radio.

If you're into building your own, check this site:
radio.tentec.com/kits/Receiver
Particularly, the model-1204 has digital readout. However, if you're merely interested in giving shortwave a try, I'd consider the Sony IFC-7600GR. It has am-sync and is highly regarded among members of this forum. I suspect they may be around shortly. Good luck.

For a simple start, one would usually resort to a kit, maybe for a regenerative receiver. The fun factor is likely to be high (you might even try building something with minimum active component count - and possibly even decent performance at the same time -, like shown here for FM: <http://www.somerset.net/arm/fm_only_lowtech.html>, and here are some examples for AM: <http://freespace.virgin.net/spontaflex.reflex/>), but don't expect a state-of-the-art DX rig. You can find plenty of schematics for existing receivers on the web (I have amassed quite a few), but even a fairly basic dual conversion set would be quite complex.

> if I don't make one is there a great beginner's receiver?

What's your budget? Sub-$100 (US), the Degen DE1103 (or its Kaito twin KA1103, more attractive in terms of warranty) is a good choice for a portable. (On a more limited budget, the DE/KA1102 and DE/KA1101 would also be quite good, but I wouldn't go down any further; the Sony ICF-SW35 is about DE1101 territory.) The Etï¿½n E5 is basically the same with a much better user interface but also higher cost. Other popular options include the venerable Sony ICF-SW7600GR (one of the best for SSB reception) and Grundig YB400PE (bad SSB). And then there's the Redsun RP2100, its counterpart KA2100 has just come out and can already be ordered (no SSB, but other virtues). All of these are well below $200.

I Googled around to see if weather affects mw and sw propagation and
came up with a few items. the most promising one is a paper by E.S.
Kazimirovsky and V.D. Kokourov:

"How weather Affects 160 m and MW Band Propagation"
from Geomagnetism and Aeronomy, vol 35, no3 12/95 p.305
It wasn't on line but it does indicate that people are studying the
matter.

Another article discussed the D Region 60 to 90 km high which absorbs
energy from a radio wave up to 7mhz including the MW. It considers it
as part of the atmosphere rather than the ionosphere. It is the decay
of the D Region that permits skip in the MW frequencies.
It is found in "FAQ Related to Propagation of Radio Waves" and is a
good primer on propagation.

Actually the MUF (maxiumum usable frequency) is the highest frequency
that propogates beyond line of sight, and the MUF is rarely beyond
about 30Mhz. On very rare occaisons it can get as high as about
60Mhz, but I don't think there is any record of it ever getting beyond
60 Mhz.

In general anything above 30Mhz is line of sight, regardless of the
modulation scheme (and mathematically, narrow band FM and AM are the
same creature). The Modulation scheme has nothing to do with how well
the signal bounces off the ionosphere.

It's 24 degrees here. About 1 to 1.5 inches of ice has fell over the past 30 hours. Expecting another inch over the next 24 hours. Cable TV and lights have started to flicker this afternoon, so the wires are starting to feel the stress.

No, AM signals above 150 mhz go straight down into the gound and cause earth tremors, unless you're on the ocean, in which case they just slosh around. SSB signals propogate outward from the antenna in a spiral pattern. Digitally-encrypted FM signals above 150 mhz propogate in a checkerboard pattern.

Sorry, couldn't resist. As far as I know, radio signals at a given frequency will have identical propogation characteristics regardless of transmission mode.

G'day,

Trying out the new DEGEN 1103 I was listening to VOA Sig 33 on 12005,
15185, 15205 KHz from 0030 to 0100 UTC. Then from 0100 to 0200 UTC
Radio Japan Booming in as usual on 17685 KHz.

The DEGEN 1103 Performs just brilliantly, blows the ATS505 out of the
water on all modes.

Regards
Mark

OBSESSION: Radical Islam's War Against The West

http://www.ObsessionTheMovie.com

"Obsession is one of the most powerful, expertly crafted and undeniably important films I've seen this year. This courageous, utterly gripping expose' deserves the attention of every American -- and merits serious consideration for the Academy Award for Best Feature Length Documentary."
- Michael Medved
Nationally syndicated radio host, film critic, and "Eye on Entertainment"

"As a retired Air Force Major General who has lived and traveled through the Middle East and has commanded major combat organizations in key Muslim countries, I believe Obsession is a movie that every American ought to see. It is the most accurate description I've seen of the great struggle that the western world will face for many years to come."
- Bentley Rayburn
Maj Gen, USAF (Ret)

" This documentary removes the veil from the hearts of those who ultimately seek our total destruction. It is must see viewing for everyone who loves freedom as we know it. It has given me new meaning and further resolve to stay the course in this war on terror! "
- First Sergeant Curtis E. Winfree
United States Marine Corps

" [Obsession] should be mandatory viewing, not only for every one in our government at every level, but for the mainstream populace as well. If ever there was a fact-based education vehicle that could unite this country against its current foe, this is it. "
- Frank Salvato
Managing Editor, New Media Journal

" I believe this is the most important movie of our lifetime, I was born in 1964, I can't tell you of a movie that I think is more important. "
- Glenn Beck
The Glenn Beck Program

"Everyone who sees this movie opens his eyes... You brought the threat home with messages that are being shown continually to the citizenry in the Middle East... You will remember [this film] for the rest of your life"
- Frank Beckman
WJR Radio- ABC Detroit

"This is the film the enemy doesn't want you to see. Obsession lays bare the true nature of the threat from radical Islam, and the true intentions of those who embrace it: expansion of their heinous ideology by the sword. This

film takes an unblinking look at their past, current, and even more frightening, future actions. For your security and the security of the country, Obsession is a must-see. "
- Monica Crowley
MSNBC Anchor and Host of the Monica Crowley Show, Westwood One Radio

"The threat to our national sovereignty from radical Islam is made clear in this chilling documentary. Obsession is a must-see for anyone who cares about the basic values of our families and our country."
- Dr. James Dobson
Founder, Focus on the Family

"Obsession is a stunning examination of the threat that faces civilization from Islamo-fascism. It is produced in the tradition of the great documentary, In the Face of Evil, providing scope, historical perspective and an urgency that no other film like has to date. I highly recommend it to anyone who understands the magnitude of the imminent threat - and especially to those who do not."
- Joseph Farah
Editor of WorldNetDaily

"This movie ought to be shown . in every community center, every school, every church, synagogue and mosque, every living room in America."
- Nolan Finley
The Detroit News, editorial page

"Viewing this documentary should hereafter be considered a prerequisite for participating in the debate about the national security challenges we face, and what must be done to address them. The full dimensions of that War for the Free World are laid bare in Obsession from an extraordinary array of sources."
- Frank J. Gaffney Jr.
Center for Security Policy President, Washington Times columnist, War Footing.com, Renew America, Military.com

"Obsession is required viewing for everyone. Especially for people who have tried to understate or ignore the threat of Radical Islam to our national security, Obsession shows how real and present the danger is."
- Howard Gordon
Executive Producer "24"

"It is a brilliant assemblage of archival footage of radical Islamic barbarities perpetrated across the globe, sermons of radical Imams from 24/7 satellite TV and undercover footage from Lebanon, the Palestine disputed territories, Saudi Arabia, Iran, Iraq, London and New York.
Obsession is indeed a wake up message to a sleeping American public cowed by fear and menace by radical Islamists in our midst. And yes, the film is distressing that such hate, incitement and barbarity flourishes in the 21st century. But the film rouses the American public into concerted action then it will have served a vital and important purpose."
- Jerry Gordon
Former U.S. Military Intelligence officer and Middle

East Affairs analyst for American Congress for Truth

"Image after image, example after example... [Obsession] is shocking beyond belief..."
- Sean Hannity
Executive Producer of Fox News Channel's Program Hannity & Colmes

"In spite of us being firmly rooted in an age of terror, too many of our countrymen seem to be complacent; complacent, that is, until visited by the next vicious terrorist attack against America. Obsession connects the dots to reveal that these attacks are not isolated incidents executed by a random group of madmen; but the extreme manifestation of an ideology of madness that has tragically captured the hearts and souls of tens of thousands in the Islamic world. In our private screening, one of CORE's members said Obsession is the West's wakeup call. It is not. It's the wakeup call for anyone that believes in civilization and the peaceful advancement of man."
- Niger Innis
National Spokesman, CORE

"Obsession is a powerful film with a deeply moving and graphic portrayal of the challenges ahead. If you haven't seen it, you should! And if you have seen it, you should insist that others see it as well. Our future may depend on it."
- Dr. Herbert London
President of the Hudson Institute

"The documentary Obsession: Radical Islam's War Against the West is a film that every person who isn't a radical Islamic fascist (or who doesn't aspire to live under shari'a law) ought to see. Those who think it's possible to negotiate with terrorists will have their worldview shaken, and those who think they understand the enemy will learn something new about how deeply true hatred can run.
I saw the Philadelphia premiere of Obsession with Skye, and we found ourselves gripped by the graphic exposition of radical Islam's nature, history, motives and intentions. The sold out 800-seat auditorium was almost completely silent during the film, except for the occasional disbelieving gasp or saddened murmur. "
- Joe Mariani
Guardian WatchBlog, American Daily, ChronWatch.com, NewsByUs.com, The Conservative Voice, OpinionsEditorials.com

"Obsession is a superbly made documentary that should propel every American into action. For those people who don't understand the threat posed by Radical Islam, and especially for those people who do understand the threat - Obsession demonstrates in the clearest possible terms that we must stand up and defend our way of life. Obsession is a landmark film that impacts in a way that speeches, books and editorials are just not breaking through to a nation in denial."
- Mary Matalin
Former Assistant to the President,
Counselor to Vice President
& Political Strategist and Commentator

"Heart wrenching...I encourage everybody to see this film...you definitely get an incredible education by watching this film...the movie left many of us speechless...we appreciate what you've done. "
- Kyra Phillips
Anchor, CNN Newsroom

" Leaves you speechless. [Obsession] is the single most powerful and terrifying public exposition of the fact that a global Islamic jihad is now being waged from Bali to Istanbul, from Chechnya to Madrid, from Morocco to Manhattan, from Thailand to Bloomsbury - and that the world that is under attack is deeply in denial about what it is facing. "
- Melanie Phillips
Author and Journalist, the Daily Mail

" The root of virtually all evil is lies. If the Germans were not told lies, there would not have been a Holocaust. The Islamic world is today also steeped in lies about the West. And that is the major source of the evils emanating from that world. Now, finally, thanks to Obsession , the West can see and hear those lies. "
- Dennis Prager
Nationally syndicated radio talk show host, author, Member United States Holocaust Memorial Council

"Obsession tells it like it is---or rather, allows the radical jihadists to tell it like it is without Western media editing. Anyone watching this film can conclude that Islamic terrorism is the main threat of our day..."
- Larry Schweikart
Professor of History, University of Dayton

"The United States is at war with a virulent form of Islamic fundamentalism. Al Qaeda, Hezbollah and regimes like those in Teheran and Damascus that support them are determined to establish a global Islamic caliphate by the end of this century. Obsession is revealing in its insights into the nature of the enemy and the threat it poses to the West and to Judeo-Christian liberal values. An absolute must see for anyone who values freedom.
- Earl H. Tilford
Professor of History, Grove City College
Former Director of Research, US Army War College Strategic Studies Institute

Personally I turned in all my guns to the authorities years ago - I urge each of you do likewise. Violence is out of control in the USA and eliminating guns is now essential, it is not a matter of IF, rather WHEN. Why not now? Make the world a safer place and do it today.

Homicide Rates Higher in States with More Guns at Home Jeanna Bryner
LiveScience Staff Writer
LiveScience.com
Fri Jan 12, 4:45 PM ET

Guns are used to kill two out of every three homicide victims in the United States, and new research shows that easy-access guns in the home make a difference. Homicide rates are highest in states where more households have guns, the national survey concludes.

The finding held even after taking into account socioeconomic status and gender.

"Our findings suggest that in the United States, household firearms may be an important source of guns used to kill children, women and men, both on the street and in their homes," said lead researcher Matthew Miller of the Harvard School of Public Health.

Gun states

To reach the findings that were released today, Miller and his colleagues examined survey data of household firearm ownership collected via a telephone survey of more than 200,000 respondents from all 50 states. The survey is part of the Center for Disease Control and Prevention's 2001 Behavioral Risk Factor Surveillance System. They combined homicide deaths over a three-year period, from 2001 to 2003, for each state.

They divided states into four groups, ranging from those with the highest household firearm ownership to the lowest. The analysis controlled for factors that could affect homicide rates, including socioeconomic status, urbanization, non-lethal crimes, unemployment, and alcohol consumption.

Respondents in about one in three American households reported owning a firearm.

"The southern states and the mountain states on average have higher gun ownership levels than most states in the northeast," Miller said.

For instance, in Oregon, 40 percent of households have guns, and more than half of the homes in Alabama own guns. Compare that with

Massachusetts, where some 12 to 13 percent of households reported firearm ownership.

Gun-related deaths

In the top firearm-household states, homicide rates were more than double the rates found for states in the lowest firearm group. Overall, the top-gun states showed homicide rates that were 60 percent higher than all other states.

Most women victims of homicide are killed by guns that were already in the home, while men tend to be killed outside of the home. From past studies, Miller said, women are more likely to be killed by people they know, such as ex-boyfriends or ex-spouses.

"Overall women are more likely to die in states where there are more guns [in homes]," Miller told LiveScience.

The study is detailed in the February issue of the journal Social Science and Medicine.

Personally I turned in all my guns to the authorities years ago...

If you truely believe that was a good idea, then may I suggest you make a sign with those words on it and put it on your house. The sign should be big enough for anyone to read from the street. If you are afraid to do this or think that would be an open invitation for someone to break into your house to rob you, then you must believe deep down that letting people know you don't have a gun is dangerous. Now if there was a law that said no one can have a gun, there would be no reason for a thief to fear robbing your house. Statistics about guns never show how many people were saved by having a gun. Even if the gun is not fired, it is a deterant. Once there are no guns, then the authorities will have all power. You only give up your guns once. Remember that. Ric in Wisconsin.

Hitler, Stalin, Tito all required people to turn in their guns.

> reception.

Medium wave bounces off the ionosphere all the time; but attenuation
in the lower ionosphere keeps it from reaching it, in the daytime.

Higher frequency makes it through, but can be too high to bounce off
the ionosphere except in the daytime.

Hence the MW good at night (no attenuation) and SW good in the daytime
(enhanced ionosphere reflectivity).

A solar Xray flare can enhance attenuation even for SW to the point that
that band dies as well, but is unusual.

You are just a shill for HD Radio/IBOC - IBOC causes adjacent-channel interference and has only 60% the coverage of analog. HD Radio/IBOC will fail, from on-going lack of consumer interest. Senator Sununu just introduced an amandment to his bill, that already has passed, to keep the FCC from mandating particular standards/produsts. BYE, bye HD Radio/IBOC !

One would think the term BASS BOOST is self-explanatory in a radio that
uses heavy equalization to get bass out of tiny speakers.

SPLIT mode re-routes the audio so that the HD comes out of one speaker and
the analog from the other.

The clandestine Denge Mezopotamia, 7590, putting in a pretty decent signal this morning at 1500.

Test tones on the frequency indicative of a soviet transmitter starting at 1457, followed by a brief song and then 5 pips at the ToH.

Reportedly via a transmitter in Moldova.

From: JAlves <notjalves_02360@yahoospam.com>
Message-ID: <E_2dnV10GvfP0TfYnZ2dnUVZ_o_inZ2d@comcast.com>
Source record: 103396

Its the frequency, not the method of modulation, that affects how radio
waves are propagated. So yes, in the same 150 MHz frequency range, both
AM and FM signals are pretty much line of site.

1259. How do you fix the Redsun RP2100?

Newsgroup: rec.radio.shortwave
Date: 2007-01-14 18:03:16 UTC
From: mpd <mdovell@comcast.net>
Message-ID: <1168797796.777838.61740@51g2000cwl.googlegroups.com>
Source record: 103204

I bought this from Liypn as I bought a Degen 1103 from her awhile ago (which also needs replacing but I don't think that's her fault)

Basically this radio crashes...from what she said is that if it doesn't turn on it means it's in a constantly loop software wise. First she says to reset it (which I have on many a time) then she said if it doesn't work to take out any powersource (AC or battery) and then to wait 24 hours...reset it and put the batteries in it.

That worked before but then it crashed again.

When the radio works it's fantastic. I bought to replace a Grundig S350 (which is also great however has way too much drift and the wide switch doesn't seem to work..i.e. I only get narrow...so if it drifts and the wide function doesn't work it's frustrating)

In terms of what causes this for the Redsun is I thought I heard something about a static charge...if this is true then this doesn't take much!

Any help would be greatfully appreciated.

If you mainly want to learn electronics, you could go to ebay
(shortwave radio) and look for a used Heathkit receiver with the
manual. You could then dismantle it in the correct order, learning
about each component and module as you go. Then, using the manual, you
could reassemble it in order. This would give you an education in radio
for very little money, and if you got it back together , you would have
a pretty good radio.
```

I wouldn't want to ship it back as I would have to pay $30 for shipping
both ways....

There was no sleep timer on and it didn't come with a manual. I've
found one online but it didn't get that technical for troubleshooting.

< Snip >

I had this problem for the longest time. What you can do is kill file on
the Trolls ID in the reference header then you will not see the replies
either.

Using a silhouette of a Sat 800 would not take much in the way of
proficiency. Make that an R75 (a smaller target) and as a bonus you get
a real desire to hit the target.

Did you try smacking it a couple of times? That is one of the first
things you want to try. It works for radios sometimes.

Thanks for the interesting account.
A similar problem was faced by the Canadian Broadcasting Corp. in the
Canadian prairies. The six 50,000 watt AM transmitters in various
cities were designed to provide service to both urban and rural
listeners over a wide area. Reception in the cities had deteriorated
due to
urban growth, high-rise concrete and steel structures, noisy overhead
wires, large and small appliances, and noisy downtown and industrial
areas.
The solution was to build medium power FM transmitters to serve the
cities and to leave the AM transmitters in place to serve the rural
areas. The CBC had aready switched to FM in Toronto and Ottawa and had
increased its audience rating, while its existing AM stations were
losing audience. They call this solution "nested FM transmitters". The
cities involved Winnipeg, Regina, Calgary, Edmonton, and two
French-speaking stations in Winnipeg and Edmonton, and the rural areas

cover approx 700 by 400 miles.
This is in contrast to the US sytem which ignores the rural areas
and bases its commercial rates on urban markets that can be counted. A
complete report can be found at:
<http://www.crtc.gc.ca/archive/eng/decisions/2006/db 2006-84.htm>

Like I wrote elsewhere, the keys are a bit stubborn on this set - they apparently lack some kind of force distribution underneath to ensure that the whole area works equally well. The actual switches are not always exactly where you expect them, so hitting the right spot helps. Don't give up if things don't work the first time, just try again and push a bit more and longer - hold the set on the back if necessary. (If I only push power on my TRA-2350P/RP2000 briefly, nothing will happen either. Apply some more pressure, and the set comes to life.) Admittedly it's an annoyance that shouldn't be there out of the beta phase, and it bugs me the most on the tuning step keys which can take a number of tries to finally react. In any case I have not needed to use the reset a single time (like it should be). My set didn't even get cunf00sed when the total battery voltage dropped to 0.9 V, though the clock was off afterwards... Why the light tends to come back on when I remove AC power is another matter, that's probably a simple bug.

If the microprocessor should really lock up, I would blame some kind of production error (a bad solder joint might do). In this case the rx would need to be returned.

Yes there is. Here is a copy/paste from my manual which you should have
gotten with it.

****

4. Adjusting the Sleep Time

Press the POWER / SLEEP button (8) once, the LCD panel will
display the "60" and the signs, representing that the radio will
be turned off in 60 minutes time.

If you wish to change the sleep time, press the POWER / SLEEP
button (8) again before it disappears, the figures on the LCD panel
will change as follows:

90 -> 60 -> 45 -> 30 -> 15 -> 5 -> 1 -> on -> (back to 90)

If you stop at 30, the radio will be turned off automatically within 30
minutes.

If you stop at "on", the radio will be turned on until further manual
intervention, the will not appear on the LCD panel.

****

If your radio is "crashing" (shutting off after a time) this is what's going
on.

Keep us posted. It really is a nice unit. I got two, I liked it so much.

Rich

I always found Canadians to be decent people, but I suppose there are
exceptions. Any fool can pluck a verse out of the bible to make a
point:
=====
Numbers 31:17-18

"Now kill all the boys. And kill every woman who has slept with a man,
but save for yourselves every girl who has never slept with a man."
======

I could write more, but I need to get on with the murder and rape as
the bible instructed me to do.

Nothing happens in pressing power...infact I've pressed it to the point of it being tilted a bit.

I'm starting to think that there's a problem with the design with the way the weight is distributed on the buttons. On the Degen I had there was a gradual wearing down (and dirt or something else) that got on the knob so when you turned it it didn't fully correspond (so it went up sometimes when you went down and vice versa)

has anyone taken these things apart? I thought I saw some pictures of this apart...

There are lots of verses in the Old Testament that can be trotted out to support any bloody-minded point but I quoted from the New Testament and it was not out of context at all. I refrained from quoting Paul's list of the 22 consequences of the condemned behaviour because I am not bloody-minded enough. Read Romans 1: 28-32 to figure out which one you are engaging in with your quote. It's in there.

OK I know this sounds odd so I sort of dropped it/ hit it a few times.

Well now it kinda works...

Audio is fine and I can tune things...but the bottons on the side don't work, I can't turn it off....

Ok I just reset it and now it won't turn on again!

I think I'm going to just take out the batteries and let it sit till maybe 8pm tomorrow

At the peak of the sunspot cycle the MUF is often above 30-Mhz in the daytime for weeks or months. It's not that rare to reach 40-mhz when the solar flux is close to 300.

Has anyone tried the Square trade 3 year extended warranty option for $8.99
Just curious, because I needed to return both my DE1103 and DE1107 for a
warranty exchange.

I'm wondering if you are still on the hook for shipping if you opt for the
extended warranty.

If memory serves me correct, you live in or near Georgetown KY.

If so, could you take a listen to ~454.2KHz for an odd FSK signal
that is not IF related. I have it on several receivers, one of which
doesn't use 455 as the IF.

I am trying to see if it is a local or it is strong enough for you to
get.

S5 for me on a variety of antennas.

I was planing on changing antennas this long weekend but the
3" of rain has dampened my spirits so to speak. I hate working
in the rain.

Terry

Hi Terry,

Yes, I am in Georgetown.

Its 03:02 UTC.....had to watch 24.....Yes I hear something on 454+-
khz. it is a noise with a pulse in it that pulses every second or so.

What the heck is it ???? Its pretty loud here. On the K9AY I get the
best signal South/ South West. S-8 on the NRD545. When I switch to the
north it is S2 or so.

All good antennas are put up in foul WX. Adds at least 3db over a fair
WX antenna.

What ever it is it is getting weaker. Now S-4 @ 03:18. With the antenna
switched to the north it is down in the noise now.

Or maybe just QSB?

I did not explain the directions very well.

The null is to the south/south west. So the signal is most likely
coming from the north of me.

There are a lot of women who own Guns too,and more and more women are buying Guns and going to the Gun ranges and learning how to properly use them.It isn't so much about manhood as it is about protecting ones life and family and home.Surplus City store a few miles from me sells Guns and they have a shootin range behind the store.

Why the gnashing of teeth about the elimination of code? It's not like the collective IQ of the hobby could sink much lower. The airwaves are dominated by inbred white trash with so little gray matter activity it makes one wonder how they received their license in the first place.

Either the test isn't as difficult as they pretend it to be or more likely, their cousin Earl was administering the test and grading it with a wink and a nod. There is simply NO WAY many of these hillbillies

could pass the Extra exam without help. So SHUT THE FUCK UP about no code marking the decline and fall of ham radio!

1337. Regarding polyphasae IIR filter.

Newsgroup: rec.radio.shortwave
Date: 2007-01-15 11:32:56 UTC
From: venkat <venkatakrishnachunduri@gmail.com>
Message-ID: <1168860776.409480.89960@s34g2000cwa.googlegroups.com>
Source record: 103332

Dear All,

Iam working subband acoustic echo cancellation.In that for
subbanding the input signal i used polyphase IIR filter.I searched in
net for polyphase IIr filter design.I got some techinical documents
related to polyphase IIr filter, I mentioned important links related to
documents below.
1 http://users.cscs.wmin.ac.uk/~krukowa/pdf/Paper27.pdf
2http://ieeexplore.ieee.org/iel5/8570/27140/01205861.pdf.

In this document the filter coeffecients are also mentioned,
But there is no time domain difference equation.I derived the
difference equation from the transfer function given in the document
and implement the filter.But the output of the filter is not clear.Give
me some valluable suggestions on time domain difference equation of
polyphase IIR filter.

Thanks in advance.

venkat.

1338. Regarding polyphasae IIR filter.

Newsgroup: rec.radio.shortwave
Date: 2007-01-15 11:33:49 UTC
From: venkat <venkatakrishnachunduri@gmail.com>
Message-ID: <1168860829.718046.149260@l53g2000cwa.googlegroups.com>
Source record: 103333

Dear All,

Iam working subband acoustic echo cancellation.In that for
subbanding the input signal i used polyphase IIR filter.I searched in
net for polyphase IIr filter design.I got some techinical documents
related to polyphase IIr filter, I mentioned important links related to
documents below.
1 http://users.cscs.wmin.ac.uk/~krukowa/pdf/Paper27.pdf
2http://ieeexplore.ieee.org/iel5/8570/27140/01205861.pdf.

In this document the filter coeffecients are also mentioned,
But there is no time domain difference equation.I derived the
difference equation from the transfer function given in the document
and implement the filter.But the output of the filter is not clear.Give
me some valluable suggestions on time domain difference equation of
polyphase IIR filter.

Thanks in advance.

venkat.

It's 5 watts. I don't know why so many fear HD radio. It's going to
exist along side analogue radio, it won't take its place. I can't
understand why shortwave fans, who want to recieve all the information
that is on the airwaves, would not be interested in free digital
signals.

Hi.
A regular, unamplified, AM loop antenna came with my Sangean HDR-1
radio. What will happen if I insert this antenna into the 7600GR AM
antenna jack? Sony says not to use anything but its own recommended AM
antennas. Will I damage my 7600 GR if I experiment with this loop
antenna?

For AM IBOC (HD) radio there is significant interference to adjacent channels. If a station on 820 kHz is broadcasting IBOC, stations on 810 and 830 kHz will be difficult to hear due to the digital noise. For those interested in DXing, this is an issue.

The digital method used for shortwave is DRM and uses less bandwidth.

Hello

What kind of connector does this antenna have ???

Remember that Sony 7600GR has a "hot" antenna plug (i.e. some current is provided to remotely switch on Sony antennas like Sony AN-LP1).

If you consider connecting the antenna with the 7600GR's antenna socket, perhaps you check first wether the radio will support a shortcut between the tip and the sleeve.

That being said, I have a recent Sony SW100 radio with the same kind of "hot" antenna socket, and I plugged-in successfully a home-made antenna that is short-cutting tip and sleeve... Some older SW100 radio are said not to support such things anyway....

So if your radio is not-so-old, it might work.

Charly

Disclaimer : I'm not a radio technical, I just speak according to my experience, don't ask me to refund your radio in case of problem :-)

indeed 1) I was draft into the US Army
2) I is a member of the Chemcal Cops
3) The military wont let me retire.
4) I dosn't serve under the name 'Mark Morgan but that's okay cuz teh FBI,
DOD, and CIA have all told me I cando it you loosers
5) I is on-the-lam from stalking former marines and fatal attraction four
ex-shemale wife
6) I was recently, paying $5/hr. to access my ISP
7) I has a 248 IQ, but can't figure out how to use a spel cheker.
8) I is a bi-sexual Pagan male ham who like to bspanked an sloid waste
9) I can't find any action on the military base in Central IL, so I hav to
ask people on teh USENET.
10) I punce
11) dyslexics are just deiferently wied losing something and gaining
other like in my case the ability to see most camoflage nets since it
stands out to my eye while my spelling my eyes self correct for so I
see what I intended no matter what they want to do soemthing I have never
done before lead men in battle
the war is treching things quuit e abitI tell em no hell no and no fucking
way.

I have it on good authority (Jerry Falwell) that you have to take the
bible literally, hence a sword is a sword.

'''''''''''''''''''''''''''

Now you've added slander to your list. I said nothing about Jews. Where
do you get the idea that I was picking on Jews?

The whole point in my posts was that homosexuals, political junkies,
and others with axes to grind should go to appropriate websites and not
clutter up rec.radio. shortwave with their obsessions. DXAce can
hardly get a report in edgewise.

That was a Remington M700 that had that issue. And someone STILL had to
operate the safety. Not to mention said person not practicing basic safe gun
handling.

"""

I recalled Paul's advice to
"put on the armour of God"
"take unto you the helmet of salvation...
and the sword of the spirit"
and thought that literal thinking should be replaced by metaphorical
thinking.

Not being of Jerry Falwell's persuasion (not that there's anything
wrong with that) I went to Google and asked "What did Jesus mean when
He said sword?"
I got 1,200,000 hits. Which was rather more than I wanted to know so I
turned to Wikipedia.
Wikpedia's article " But to Bring a Sword" summarized the various
points of view of the matter and pointed out that:
Paul does not advocate violence against the wicked. On the contrary,
he indicates that "the worst punishment for the sins of the wicked is
to turn them over to their own desires because the wicked are perfectly
capable of destroying themselves."

This is a contoversial topic that is affected by literal or
metaphorical thinking, religious persuasion, Bible translation, word
meanings, and culture of the time.
Wikipedia has a good selection of references at the end of the article
giving various points of view.

Incidentally, this is exactly the type of material that should NOT
appear in rec.radio.

Hey man I have put up antennas in the middle of summer T-storms,
blizzards and 2 ice storms.
But this soup is just too much. I find it hard to accept that I am
looking forward to colder weather
as it wll freeze this cr er stuff.

I am using a LF/MW/HF phaser and it appears to be slightly NE of me.

And there is a long term variation. I normally think of LW as being
"imune" to propagation
effects, but at 455 it is clear there is some fading. And I think this
signal is fairly far to
get this much fading.

Thanks for repsonding.

I have to go to my sister in laws next week end and I hope to take a
minimal set of antennas
to see if 200 miles west is enough of a base line to allow some
accurate measurements to be
taken.

It looks like a mulit-tone FSK for .8S with a .2S synch pulse.

Terry

Correct, DRM is just digital, no analog.

IBOC transmits both analog and digital components.

By transmitting both analog and digital components, IBOC uses about three
times the bandwidth compared to DRM.

I suppose you have never heard the no. 1 rule of gun safety.
Always have your gun pointed in a safe direction. No. 2 rule.
Never point your weapon at anything you dont "intend" on
shooting. Makes for everybody being safe.

Terry

Good luck with your test.

One of these days I want to play around with some of Dallas Lankford's
low noise vertical antenna designs.

BTW.....if you want to look at my listening shack....I have a picture
up on QRZ.com under my call KG4BIG.

> VLW, the ABC shortwave service for the outback areas of Western
> Australia

However, the ABC still provides a service to remote areas of inland Australia from Alice Springs, Tennant Creek and Katherine, 24/7. Unfortunately, the daytime services from these three 50kW stations can not heard in southern Australia but the night-time frequencies can be received without problems in wa an

Closure of ABC Inland WA Shortwave

In the mid-1990s, I received an unusual assignment from the Australian Broadcasting Corporation. They had a short-wave station in Western Australia, which repeated the local radio program from Perth, the capital of that state. Western Australia is huge - bigger than most countries of the world: it's about 2000 kilometres square - but much of

it is near-desert, and uninhabited. The population of the state is about 1.5 million, and almost 90% of those live either in Perth, or the

coastal areas in the south-west of the state. Most of the rest live in 20 or 30 small towns, all of which have an FM repeater station. Less than 10,000 people lived out of range of an AM medium-wave or FM station.

The short-wave station was intended for people living in remote areas. But most listeners hate listening to short wave radio, and will do it only if there's nothing better. The same program had been broadcast on satellite for at least 5 years, and though satellite receivers are expensive, many people in remote areas of W.A. had bought them.

Our assignment was to find out how many people were still listening to the shortwave service.

Given the tiny, scattered population, we figured that many of them might know each other. Some of them lived on large farms ("stations" as

they call them in that part of the world), and others in aboriginal communities. Using a CD-ROM of all published phone numbers in Australia, we found less than 1,000 in these remote areas.

We decided to use a snowball sampling system: to ask each respondent if

they could name any others who were out of reach of normal radio. We had maps showing signal strength, but didn't completely believe them. Officially, if the AM signal strength is less than 0.5 millivolts per metre, it's not usable. In fact, we found people listening to AM with far lower signal strengths than this. Visiting some "stations" we heard

AM radio that, to us, was unintelligible. But people who'd been listening to it for years could understand it quite well during the daytime. At night, there was so much interference that listening was impossible; the best signal was often soon after dawn.

We found almost nobody who listened to the shortwave service, and many people who complained of poor AM signals didn't even know the shortwave

service existed - even though it had been around for decades.

On the basis of the surprisingly large AM audience, and the high percentage of outback people with satellite receivers (about $5,000 each) we saw no reason why the short wave service shouldn't be closed down. When the transmitters were built, around 1945, they were on the outskirts of Perth. By 1995, they were in the middle of a suburban area, and the land had become very valuable.

Eventually, the shortwave transmitter was closed down. Complaints flooded in, from people we hadn't found in our survey: crews of ships in the Indian Ocean, and mining and prospecting workers with short-wave

radios in their 4-wheel-drives. Even if we'd known those listeners existed, we couldn't have selected them with our sampling frame of Western Australian phone numbers.

The transmitters in wa weren't opened up again - there was too much money at
stake for that. But this experience taught us not to underestimate the mobile listeners. How to find them - given that many had their homes in

Perth - was quite another matter.

- Dennis List

"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales

One evening at Shannon Wright Compound in Vietnam,a few guys and myself caught a three wheeler Lambretta taxi to go to the town of Vinh Long,a distance of about three miles.There is a river at the edge of Vinh Long and as we were crossing the river,we heard the pop of a Rifle.I guess it was aimed at us.We were all wearing our civies and we didn't have any Rifles or Handguns with up.Another time in Vinh Long the power went out,it was totally dark all over town.Somebody started throwing rocks at us. www.devilfinder.com Bungalow Hotel Vinh Long Vietnam

the wimmins,ya know? back then,there wasen't any stairs from the first floor to the second floor of that hotel.We had to climb a ladder to get up there.

That was my first long distance MW station. After WJJD 1160 used to go off every night, I would hear them on 1157kHz. My next dx station was PJB on 800kHz, followed by 4VEF in Haiti. I used a Zenith Royal 41.

Recently, I was listening to an analog radio and found myself longing for the digital signals of the same stations and also wondering what was playing on the HD2 stations. However, I haven't noticed any interference on either AM or FM. My big complaint is that at night, some of the HD stations seem to get weaker and I can't receive them anymore.

Which HD radio did you buy, and how is it working out for you? The
performance of HD radios is partially dependant on where you live. Some
large cities with many
100,000 watt FM stations will challenge an HD receiver. I listened to
the Boston Accouctics
Receptor at one of my local Radio Shack stores and they didn't even
have a good antenna hooked up to the unit, hence reception on all
FM channels was
compromised. Radio Shack is notorious for having no knowledge of
reception hence
making themselves look bad. Also they had no list of which stations
were HD or which had HD-2 or HD-3. They are sorely lacking in educated
sales people, and even the managers were ignorant. Good luck with your
HD experience. I found the Radio
Shack HD receiver had more information in their display than did the
Boston Accoustics Receptor. Dave N........

I live in the DC area. There are 21 HD FM stations some of which multicast. I get 19 clearly. There are 2 HD AM stations, both of which I get. I use the telescopic FM antenna and the Select-A-Tenna AM antenna. However, the included AM loop antenna works pretty good by itself.

Dallas's active antennas configured as a dipole and mounted horizontal
allow
the desired signal to be peaked, or noise nulled. 2 of these dipoles
mounted
as vertical dipoles and coupled to his new simple phaser allow
electronic
steering.

His new 15' relay switched vertical works very well, but may need to be
amplified
for use with the phaser. The rain stopped that experiment.

His simpler active antenna shown in his "Low Noise Active Antenna AC/DC
Power Supplies"
is a good antenna for locations that have "reasonable" MW signals. My
local 770KHz pest
is strong enough to give some 2nd harmonic and I have some mix of the
770 and 1240.

Terry

I don't see enough details on the Web to know whether this radio has
that capability at all, but...

the choice of channels will be a local thing. Repeaters will be on
different channels in different places. As I understand it, you'll have
to make arrangements with the repeater owner for access, and I'd imagine
they would be the best people to ask about how to get in with your
radio. (and if it's possible at all)

Two sites with more information:
http://www.gmrs.org/gmrs_information.htm
http://www.g-m-r-s.org/repeaters4gmrs.htm

I think the other reply who flat-out said it wouldn't work thought you
wanted to use the LXT300 to make your own repeater - not that you wanted
to use it to communicate through a repeater that already exists.
Actually, you *could* make a repeater out of *two* LXT300s, but you'd
require some other equipment as well, it wouldn't work very well, and
you probably couldn't get it licensed by the FCC.

I think he wanted to use the LXT300 to communicate through someone
else's repeater, not to make his own repeater.

From a strictly technical standpoint, you probably *could* use *two*
LXT300s to make a repeater. You'd also need a duplexer and some control
circuitry. And I doubt the FCC would license it. I don't know the
power limits for repeaters in the GMRS service - seems to me it's
probably quite a bit higher than one watt, so the two-LXT300s trick
would make a pretty wimpy repeater!

...
Underlying the Clinton security failure was the fact that the administration was made up of people who for 25 years had discounted or minimized the totalitarian threat, opposed America's armed presence abroad, and consistently resisted the deployment of America's military forces to halt Communist expansion. National Security Advisor Sandy Berger was himself a veteran of the Sixties "antiwar" movement, which abetted the Communist victories in Vietnam and Cambodia and created the "Vietnam War syndrome" that made it so difficult afterwards for American presidents to deploy the nation's military forces.

Berger had also been a member of "Peace Now," the leftist movement seeking to pressure the Israeli government to make concessions to Yasser Arafat's PLO terrorists. Clinton's first National Security Advisor, Anthony Lake was a prot�g� of Berger, who had introduced him to Clinton. All three had met as activists in the 1972 McGovern presidential campaign, whose primary conclusion was the "arrogance of American power," rather than Communist aggression, fueled the Vietnam War.

Anthony Lake's own attitude towards the totalitarian threat in Southeast Asia was displayed in his March 1975 Washington Post article, "At Stake in Cambodia: Extending Aid Will Only Prolong the Killing." The prediction contained in Lake's title proved exactly wrong. It was not a small mistake for someone who in 1992 would be placed in charge of America's national security apparatus. Lake's article was designed to rally Democrat opposition to a presidential request for emergency aid to the Cambodian regime. The aid was required to contain the threat posed by Communist leader Pol Pot and his insurgent Khmer Rouge forces.

At the time, Republicans warned that if the aid was cut, the regime would fall and a "bloodbath" would ensue. This fear was solidly based on reports that had begun accumulating three years earlier concerning "the extraordinary brutality with which the Khmer Rouge were governing the civilian population in areas they controlled." But Anthony Lake and the Democrat-controlled Congress dismissed these warnings as so much "anti-Communist hysteria" and voted to deny aid.

In his Post article, Lake advised fellow Democrats to view the Khmer Rouge not as a totalitarian force-which it was-but as a coalition embracing "many Khmer nationalists, Communist and non-Communist," who only desired independence. It would be a mistake, he wrote, to alienate Pol Pot and the Khmer Rouge lest we "push them further into the arms of their Communist supporters." Lake's myopic left-wing views prevailed among the Democrats, and the following year the new president, Jimmy Carter, rewarded Lake with an appointment as Policy Planning Director of the State Department.

In Cambodia, the termination of U.S. aid led immediately to the collapse of the government allowing the Khmer Rouge to seize power within months of the congressional vote. The victorious revolutionaries proceeded to implement their plans for a new Communist utopia by systematically eliminating their opposition. In the next three years they killed nearly 2 million Cambodians, a campaign universally recognized as one of the worst genocides ever recorded.

Maybe out of place for this group---but maybe not, as there were quite a few posts (and interest) here about the (in)famous "Suit Sat".

Well, a new satellite has been launched that may be interesting to copy/QSL...

From the ARRL web site (arrl.org):

> (Jan 15, 2007) -- AMSAT-LU (Argentina) has announced that
> Pehuensat-1, the second Argentinian Amateur Radio satellite, now is
> in a 635 to 640 km sun-synchronous polar orbit (97.92 degree
> inclination). It was launched on January 10 from India. Once
> activated Pehuensat-1 will transmit voice messages in three languages
> -- English, Hindi and Spanish -- on 145.825 MHz followed by AX.25
> 1200 bps packet. Named after the native Patagonian Pehuen tree,
> Pehuensat-1 was developed by the Argentina School of Engineering at
> the National University of Comahue, the Argentina Association for
> Technology and Space and AMSAT-LU. More information is on the
> AMSAT-LU Web site. To determine the next pass at your location, click
> on the small revolving globe off of the coast of Argentina, select
> your location from the map, and then select PEHUENSAT-1. Reception
> reports are welcome. -- AMSAT-NA; AMSAT-LU

To know when to copy the satellite, you have to know when it is close to your location. To do that you need a good satellite tracking program. You can use the one mentioned in the article above, but it seems a bit difficult to use and only covers a limited number of cities. Let me recommend a very nice tracking program with a very nice price--free!

Go to www.stoff.pl and download "Orbitron 3.71". Once you load and install it, make sure you update the "Keplarian elements", the latest orbital data the program needs to give you accurate tracking info.

I've been using the Sangean HD-1 the sound quality is good,on fm and am.I live in columbus ohio area ,we have a few hd radio station most of them are on fm,only 2 for am. Now on my analog radio 1230am at night drifts, it low power station,but on Sangean it comes in great . of course,i notice the station in hd during the day,at night it's not. the only complaint i have is there a switch for news & music- is placed on the rear of the radio,it's hard to get to,it should on the front. also the internal clock loses time,all the time.the sound quality sounds great. Robert

Any idea of current times and frequencies for Isla da Pascua?

Wasn't there only a flight or two a day out of there?

Greetings,

I have just got a sony ICF sw7600GR and it is a very nice radio. The sync detector seems to take care of a lot of the distortion, but the audio continues fading in and out and is quite annoying. Could the fading be mitigated to any extent by using another stage of agc? I am going to be doing some experiments with the 455kc if out on my Red Sun RP2100 whenever it gets here. Detectors, filters, SSB, etc... I thought that along with other experiments I might want to try some outboard agc.

regards,
NEO

1452. mediumwave logs, east coast, december 2006

mediumwave logs, east coast, december 2006
Do you North American east-coasters have any idea how much easier mediumwave DX is for you? While there, I would often tune into a station and get a clear identification within 10 minutes. States along the east coast are smaller, so stations seemed to be from all over the place. In California, I can identify a mediumwave station 500 miles away, but it's still in California. Where's the fun in that?

I went to the east coast for the holidays last month, and my Eton E5 came along. Unfortunately, I grabbed the wrong set of rechargeable batteries, because they quit working after about an hour. "Batteries, don't fail me now!" I wrote, when I saw the battery meter drop down to two bars.

I was in northern New York, with my E5 running on fresh alkalines. I think the biggest weakness of the Eton E5 for mediumwave DX is that tuning off the main frequency dramatically increases the noise level. I am not sure what causes this; it could be IBOC sideband signals or just plain adjacent channel interference. Anyone have ideas about this?

Here are the highlights of my mediumwave DX attempts:

570: Strong english. "Isn't it about time you tried Viagra?" "We are news radio WSYR 570, Syracuse." (WSYR; Syracuse, NY; 5 kW)

580: "This is CFR news." Ottawa, strong english. (CFRA; Ottawa, ON, Canada; 50 kW day, 10 kW night)

600: Laura Bush's skin cancer. Joe Barbera (cartoonist) left us. Faint english. "Looking for something special for Christmas? How about a grand piano?" "You're listening to the big one - 600 WICZ." Uh, okay, I can't find a listing for this station at either fcc.gov or radio-locator.com . Connecticut has WICC, but it's a 1/0.5 kW station, so why would it identify as the big one? WICZ is the callsign of a television station.

610: "Eastern New Jersey." "Tailgate City USA." Address in NJ, "minutes from both bridges." "Sports radio 610, WIP." (WIP; Philadelphia, PA; 5 kW)

620: Strong english. Football. Cincinnati Bengals / ________ Colts. (Indianapolis Colts, in fact.) "Sports radio 620, WHEN Syracuse." (WHEN; Syracuse, NY; 5 kW day, 1 kW night)

640: "AM 640 (sir monta?) radio." Heard it four times but I didn't understand. Maybe "toronto radio?" (CFMJ; Toronto, ON, Canada; 50 kW)

660: Medium strength english. Football: Bengals / Colts. Fading. "Second and long." Seems to be east/west. "Monday night football on westwood one." "WFAN New York." (WFAN; New York, NY; 50 kW)

680: Sports. A commercial with a .ca website. "All news radio." Jumbled. Traffic on the 401. Toronto weather. "680 news." Top 5 albums of the week in Canada. (CFTR; Toronto, ON, Canada; 50 kW)

700: "700 WLW." (WLW; Cincinnati, OH; 50 kW). Well, that was easy.

720: Speaking to a Holocaust survivor who lost his parents but escaped with his sister to Holland. Station address: 435 North Michigan Avenue. 591-7200 (phone number). Signal is medium to faint. Evacuation at northern Illinois hospital. "Outbound Eisenhower is slow." "WGN forecast." "Weather voice of Chicago, WGN." (WGN; Chicago, IL; 50 kW)

740: Strong english. "AM 740." Don Franks, 'round midnight. Clock factory ad. 416 area code (Toronto). Christmas music from the 1930s. Nice jazz! "From Toronto, AM 740" ... "Welcome to the all-night jukebox." (CHWO; Toronto, ON, Canada; 50 kW)

750: Strong english. Muslims in Atlanta. Dressing up in full burqa and walking around in a mall to gauge reactions. "wsbradio.com." (WSB; Atlanta, GA; 50 kW)

760: Detroit. "News talk 760 WJI" (or WJR?) (WJR; Detroit, MI; 50 kW)

780: Strong english - religious. Advertising homes in Lake Geneva. Ad for Skokie/Highland Park. WBBM. "wbbm780.com." "Bears radio, news radio." Chicago? (WBBM; Chicago, IL; 50 kW)

790: Strong english. Christmas music. "790 WTNY mitten tree." (WTNY; Watertown, NY; 1 kW)

800: Medium-strength country music. "Q country." (CJBQ; Belleville, ON, Canada; 10 kW)

810: Medium-strength english. OJ book deal canceled. Boder patrol agents facing prison time, should get pardoned by President Bush. Rollie James show (sp?) with so many in-show commercials! She talked about a radio turntable, for "when you're DXing AM." Pajamagram.com, C.Crane, Trans-Siberian Orchestra. Pepsi Arena. "810 WGY, Schenectady/Albany". (WGY; Schenectady, NY; 50 kW)

840: "84 WHAS." Fox news radio - Laura Bush had skin cancer tumor removed from shin. (WHAS; Louisville, KY; 50 kW)

870: Strong english. CBS news. Successful spacewalk to repair solar panels on the space station. Death of Barbera in Los Angeles. Fading. "Newstalk 870 WHCU." (WHCU; Ithaca, NY; 5 kW day, 1 kW night)

890: Medium-strength english. The jewelry exchange. Chicago weather at O'Hare. WLS. "WLS news." "Chicago's talk station." (WLS; Chicago, IL; 50 kW)

920: "AM 920 CKNX." Toronto hockey. Other stations are here too but CKNX is dominating the frequency. (CKNX; Wingham, ON, Canada; 10 kW day, 1 kW night)

930: "WBEN"-BCN,BZN? Weak-n-jumbled. (WBEN; Buffalo, NY; 5 kW)

940: "Every day on Montreal today." "The new 940 Montreal." Coast to Coast AM. Cool bumper music. Art Bell (is it a recording?) (CINW; Montreal, QC, Canada; 50 kW)

950: Strong english. "purplepages.com". "Winter in Central New York." Utica address in advertisement. Lars Larson. "Talk radio 950 WIES". I guess I got the callsign wrong. (WIBX; Utica, NY; 5 kW)

960: Strong clear english. Kingston mentioned in an ad. Hockey game at the Air Canada center. "They were good, we were horseshit." -- Paul Maurice, head coach of the Toronto Maple Leafs. "oldies960.com". The Maple Leafs lost to the Florida Panthers. Saturn of Belleville advertisement. "If you're going to San Francisco, be sure to wear some flowers in your hair." "Oldies 960... AM 960 CFFX". (CFFX; Kingston, ON, Canada; 10 kW day, 5 kW night)

970: Faint. Loveline. "You know what a glory hole is?" (Possibly WZAN; not enough data to confirm.)

990: Sports. Medium strength; jumbled, fading. Allen Iverson is happy with the deal. "Sportscenter every 20 minutes. ESPN radio." (Possibly WTIG.)

1000: English. Chicago team - ad. 708 areacode in ad. absolutepoker.net. "absolutepoker.net is not a gambling website." Oh, I see. They just let you download the poker app. Sports talk? Jim Rome? Yes. "Live from Southern California... Premier Radio Networks." T.O. fined $35k for spitting in someone's face. He admitted it after the game but later changed his story. Carmelo Anthony in trouble.

1010: "Newstalk 1010 CFRB." (CFRB; Toronto, ON, Canada; 50 kW)

1020: Strong english. "Matt Damon is a horrible guy." "1020 KDKA, the voice of Pittsburgh." Bill O'Reilly show. Yuck. CNN headlines. (KDKA; Pittsburgh, PA; 50 kW)

1030: Soft, clean english. 617 areacode. Should the first lady have any expectation of privacy? "He's next on WBG." (Actually, it's WBZ.) (WBZ; Boston, MA; 50 kW)

1060: English. "Join other Pennsylvania homeowners."- ad. "Delaware valley." "KYW news radio." (KYW; Philadelphia, PA; 50 kW)

1070: "Information radio, 1070 CHOK." (CHOK; Sarnia, ON, Canada; 10 kW)

1080: English, politics talk. "WTIC news talk 1080." Sean Hannity show. (WTIC; Hartford, CT; 50 kW)

1090: JT. Sports talk. CBS news. No sign of the 2 climbers on Mount Hood in Oregon. "AM 1090 WBAL Baltimore." (WBAL; Baltimore, MD; 50 kW)

1100: Strong english. George Noory? Yes it is. Doors, "Come on baby, light my fire." Italian dining in Macedonia. Ohio? WTAM.com. "WTAM 1100 Cleveland." (WTAM; Cleveland, OH; 50 kW)

1110: Strong english. Predicting Hilary will win. Neil Bort show of government outrage. "Newstalk 1110 WBT." WBT.com. (WBT; Charlotte, NC; 50 kW)

1130: Financial talk. Executive pay, Wall Street. Bloomberg rewind. Holland/Lincoln tunnel. GW bridge; traffic for NYC. "Five boroughs." "Bloomberg 1130." (WBBR; New York, NY; 50 kW)

1140: English, jumbled. "1140 WRVA forecast." WRVA.com. (WRVA; Richmond, VA; 50 kW)

1150: "1150 ?KOC." ... "CKOC." (CKOC; Hamilton, ON, Canada; 50 kW)

1170: Religious. "This is why people are not getting saved." "Radio bible hour...Jesus never fails." Midnight shift miners news. I've never heard this before! "Midnight shift...(place)...will work as scheduled." Mining bulletin board. "This is the big one - news radio 1170 WWVA." Does every AM station have to identify as "the big one"? (WWVA; Wheeling, WV; 50 kW)

1190: Religious. "WLIB." "1190 WLIB." (WLIB; New York, NY; 10 kW day, 30 kW night)

1210: English. Survey about pre-marital sex using government data. 45% of Americans had pre-marital sex. "Your tax dollars paid for the collection of data." "Here in Philadelphia on Big Talker 1210." Strong, clear signal. "The big talker 1210, WPHT." (WPHT; Philadelphia, PA; 50 kW)

1290: "News talk 1290 CJBK." (CJBK; London, ON, Canada; 10 kW)

1300: 702 areacode. Ronnie Duncan. "Cleveland's news talk 1300 WERE." (WERE; Cleveland, OH; 5 kW)

1320: Christmas jazz music. Also a french broadcast on the same frequency. "1320 WJAS Pittsburgh." CNN radio. (WJAS; Pittsburgh, PA; 5 kW)

1380: Taylor auto mall ad. Kingston. Memorial cup. "The limestone city." "1380 CKLC." (CKLC; Kingston, ON, Canada; 10 kW)

1500: Strong english. Massachusetts politician. Possible republican presidential candidates. "Right here on Washington Post radio." Jim Bohannon show. Light fading. "Washington Post radio ... 1500 AM." (WTWP; Washington, D.C.; 50 kW) <- there's your representation

1520: Southwest airlines. Green Bay Packers game. Strong signal. Same game (but with slight delay) on 1530 khz. This should be interesting. Packers vs. Vikings. 6-0 in the third. 8 penalties for Minnesota. Vikings go ahead 7-6 with a TD return on interception. Thursday night football on Westwood one. Still no station id... no id in over an hour

is so lame! Got id finally. Packers win 9-7. "AM 1520 WWKB Buffalo ... Buffalo's left channel ... 50,000 watts." (WWKB; Buffalo, NY; 50 kW)

1530: Toyota dealer: Cincinnati/northern Kentucky. "1530 Homer, the sports animal." (WCKY; Cincinnati, OH; 50 kW)

1560: Strong music station. Odd christmas song - hiphop style. Radio Disney. (WQEW; New York, NY; 50 kW)

1650: Old Navy commercial. Radio Disney? (WHKT; Portsmouth, VA; 10 kW day, 1 kW night)

Radio Vision Cristiana's Turks and Caicos transmitter on 530 kHz
should be a fairly easy catch in your neck of the woods, probably
more because it has no interference than for any other reason. (unless
you're on top of a co-channel TIS station)

For the opposite reason, their stations on 1330 kHz. from NYC to
Ecuador range from difficult to extremely difficult.

AGC systems don't lend themselves to easy modification.

There are many issues, attack time and release time, are the two most
significant.

Too fast the audio gets "chopy", too slow not enough effect.

I think I can say that I really understand the Kenwood R2000. And while
I have
tried several "improved" AGC designs, none made enough difference to be
worth mentioning.

The DX398 has some published modifications that you may want to track
down.
The main effect as I recall was to slow the release time. The DX398's
AGC
is a tad too fast.

Good luck and let us know how it works.

Synch detectors can mitigate the some of the effects caused by fading.
But in my experience are not the "do all- end all" that I had hoped.

At this point I have decided to concentrate on improving my antenna
to get the most signal and as little noise as possible. A much better
pay off for the energy required.

Terry

Dang, that was a good radio...the SW was strong, and every nught,
before turning in, I'd flip it on, scroll through the SW1 band,
listening to a few dozen station for about 15 minutes....but sadly she
died on me, and I threw it away...
I bught a Grundig Yachtboy......what a pieve of crap....I'm lucky to
receive 2 - 3 stations, usually jesus stations...nowhere near the
reception power of the 30 year old Panasonic....
Maybe i can snag one off of ebay...

Synchronous detectors have never been about dealing with fading. They
are about ensuring there is enough "carrier" to beat the sidebands down
to audio.

So there's fading on the incoming signal. That means the amplitude of
the sidebands is varying with that fading. A locally generated "carrier"
at the receiver ensures that there is something to beat those sidebands
down to audio, even if the transmitter's carrier has faded too much to
do the proper job. But a constant level "carrier" at the receiver beats
the sideband down to audio intact, ie an ideal mixer would not add anything
to the signal. So if the sideband is fading, of course the audio output
of the receiver will vary with that fading.

What the sync detector brings you is the ability to decode that signal
even if the carrier goes missing, because of selective fading.

Dealing with the fading of the sidebands is in a different realm, and
obviously a miraculous receiver that eliminates fading has long been
sought after. Armstrong dealt with it in part, by moving to FM
and using limiters in the receiver, but that only works when the signal
is above a certain level. Below it, the signal levels are too low for
the limiters to kick in, and that fading is obvious.

Beyond a certain point, you get conflict. Have a scheme that does
a really good job of eliminating the fading, and likely that starts
affecting the "fidelity" of the signal, because how do you discriminate
between the voice at the transmitter end varying in amplitude, because
the speaker starts talking more quietly or even just because sounds are
made up of varying levels, and the signal fading as it travels to the
receiver? It's easy to counter some of the fading, but it gets harder
the more you try to conquer it.

Michael

No price yet - but looks pricey

For those that want the best (or one of the best)

Freq coverage 0.005 to 3335 MHz

Has Roofing Filters, DSP, Spectrum Scope, lots more

See Pre-Lease Brochure at URL:
http://www.icomamerica.com/brochures/ic-r9500_pre.pdf

From CL (defined at URL:)

Currently most if not all stations turn off the digital signal at dusk.

It is during the daytime I can't hear distant stations anymore because
of the digital crap.

< Snip >

Sync is for selective fading specifically when the carrier fades but
most of the side band information is still there. When the fading is
wide and covers the entire channel it can not help.

Not familiar with Satscape...will have to research/try it.

I used to use STS Plus, a really nice program, but created in the DOS era. It never -quite- learned to how peacefully co-exist in the Windows world (and seemed to develop more quirks as Windows evolved). Is there a new Windows version???

For the times of flights you have to look up the LAN airline schedules. They are the only scheduled airline flying there apart from the odd Chilean airforce activity.
See www.lan.com
Ya, there are only one or two flights a day depending on the day of the week.

Mark from Auckland NZ gave me the frequencies a year or two ago, but I can no longer find them = sorry.
One was 8867USB MWARA SP, and the other was 5 megs, perhaps 5643?
Working that freq. he found "Pascua Radio" and "Tahiti Radio" in Spanish wkg LAN a/c.

Have fun and good luck.

Ah yes, Sputnik. I was a 12 year old kid at the time, wanted to listen
to it in the worst way (20 Mc/s) and the only receiver in the house was
a BC-348 that just went up to 18 Mc/s. I started to build a 15 meter
converter, but Sputnik's batteries went dead before I finished it...

Message-ID: <sImdneoJ1alKEzDYnZ2dnUVZ_sKunZ2d@comcast.com>
Source record: 103423

The purpose of the sync detector is not to reduce fading, but to reduce the distortion during the fades. A good sync detector does a remarkable job of that, even when listening to music. A sync detector that allows one side band to be selected adds the ability to reduce adjacent channel inteference.

and the Cuban people during this time of sadness. Mr. El Presidente our thoughts are with you, please get well soon. You've been a beacon of light and hope in this troubled world for over 50 years now, your strength, courage and vision unmatched. Thank you for your selfless service to Cuba and all of humanity.

1480. The Shortwave Shop

Newsgroup: rec.radio.shortwave

A little while ago I visited The Shortwave Shop's website (http://www.shortwave.co.uk) only to find that they're now under new management. Most of their old website is gone, and there's a link saying "To order a Wellbrook loop, click here" or something to that effect. The link is an email link. I don't think I like this new turn of events. Anyone know what the story is?

Steve

Doing a blind search on the freq is too speculative and rather time consuming due to the sheer number of stations you'll hear.

What I'll do is to go to http://www.primetimeshortwave.com/ to download the latest freq and station details for English broadcast. For non-English broadcast, I'll go to the station's website for the details.

You need to get a newsreader. See those two dashes followed by a space?
That's called a ".sig delimiter", and in a newsreader (one that works
properly, mind you -- not OwiE, IOW), that gets stripped off
automatically. Of course, for a newsreader, you need a real NSP, too, so
you may well be fucked anyway.

> funny how the kooks and their little play mate marqueer can dish it out
> but they can't take it!

You don't quite seem to get the meaning of the "Golden Killfile". It
doesn't mean he's actually killfiled by the group as a whole, only that
he's considered by the group to be a boring k00k. You, OTOH, are another
matter -- calling kookologists "kooks" is a kooksign, for one thing, and
rampant, raging homo-/biphobia is another.

Cracked voluntarily self-immolates, in MID:
1159678991.838385.310840@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce and
Hoffman shared was the real spirit behind the Yippies--a term I coined
to describe a phenomenon that already existed: an organic coalition of
stoned hippies and political activists who engaged in such actions as
throwing money on the floor of the New York Stock Exchange, then
explaining to reporters the meaning of that symbolism. Folksinger Phil
Ochs summed it up: "A demonstration should turn you on, not turn you

off." So when journalists link the Yippies with misleading bedfellows, at best it's careless shorthand; at worst it's deliberate demonization. Osama bin Laden wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

I've just tuned in to Radio New Zealand (9765khz) 0714UTC and bugger me
another station fading in and out severly interferring with RNZI :(

Can anyone else positively determine / ID the the Station, Passport To
WBR says it maybe Turkey or HCJB ?

Regards
Mark

Interference just stopped at 0728UTC so based on that and Passport WBR
It was Voice f Turkey Targeting S-Europe 250kw.

Ahhhhhh a clean copy of RNZI now I can sit back read the res of my emails :)

A good receiver, most probably. Looks very much like AR-Alpha by AOR.

Seems to be a professional receiver - most radio enthusiasts do not need to know what is happening in the world above 1,3 GHz.

i don't want to set up an outdoor antenna
i listen mostly via headphones

which radio do i get?

sony icf-sw07 which comes with the an-2, but VERY pricey little number!
or
eton e1? which is the mac-daddy but i hear it kind of stinks without an
external antenna

or
sony icf-sw7600gr coupled with the expensive aor la-308 antenna (can i
even hook it up?) which would sit on the nightstand (impractical?)

> that was bought on eBay from China ~ RHF

Well technically they ALL will come from china reguardless of the name
on it.

My problem lies more with the respect in terms of repairing it...if
it's DOA I'll just tinker with it...maybe open it up.

On the same note what makes us think that the KA2100 is better
qualitywise than the RP2100?
Kaito is great don't get me wrong I have a 1103 and if it wasn't for
the knob it would be great (it was a early batch and will probably get
another)

Also is there a KA 3000 to come out when the RP3000 comes out? If the
quality is up to kaito standards AND comes with the whole SSB thing
that would be fantastic but it looks like we'll have to wait till the
fall for it

The Sony ICF-SW7600GR is a very good value. It comes with a clip-on,
reel antenna. I'm sure the AOR LA-380 is a fine antenna, but I wouldn't
recommend spending that much money on an antenna that has to be used
indoors. It's also worth noting that some outdoor antennas are very
small, easy to hide, and don't require much in the way of "setting up".
That said, if for some really you really can't go the outdoor antenna
route, I'd recommend either sticking with the reel antenna or buying
one of the Sony AN-LP1 loops on ebay.

Has anyone tried to measure the fading of the carrier and use that as a
guide as to whether the level change in the sideband is fading related
or program content related?

Bob

Hello all DXers,

DXclusive is an electronic bulletin published fortnightly (altogether about 20 issues per year) by the Finnish DX Association. It contains recent loggings, loglists from DXpeditions, news, QSL -information and so on; most of the stuff is reported by Finnish top DXers. The loggings are mostly in Finnish, sometimes in Swedish or English (the majority of the loggings have also been published in the Online Log of the hard-core-dx -portal). Most of the news are in English.

Issue no. 1/2007 has just been released, and it contains 31 pages (pdf -format). During bad propagation it may go down to 8 pages, but as far as I recall correctly, the biggest issue of all times has had 44 (or maybe 48?)
pages.

DXclusive 2007 is available for 10 euros or 15 US dollars. The subscription with the fee can be sent in a letter to Finnish DX Association, P.O.Box 454, 00101 Helsinki, Finland. Inside the EU the fee can also be paid electronically (we can send you the necessary IBAN and BIC codes).

Please send your questions and inquiries privately to:

Impressive list ! I am in Maryland, and using my $10 Sony ICF-S10MK2 hand-held radio, I regularily get (nighttime) South to 870 WWL New Orleans, West to WHO 1040 Des Moines, West to 1120 KMOX St. Louis, and North to various Canadian. If you haven't seen this, here is a list of 50KW AM stations:

http://www.northpine.com/broadcast/50kwam.html

A month ago, I even picked up 1080 KRLD Dallas, for a minute, with my Sony !

Yes it can be used WITH a repeater. You will have to contact the repeater owner to get permission to use his repeater unless you put one up yourself. The channel depends on the repeater. You WILL have to have a license to use a repeater and that will cost you 80$ here...

http://wireless.fcc.gov/uls/index.htm?job=home

If you study the link below it has ALL your answers!

I'm at a loss as far as understanding the value of sniping software.

Ebay auctions always close with the item going to the highest bidder.
All you have to do is enter your highest maximum bid and let the Ebay
proxy bidding software do it's job. A high bid is a high bid and it
does not matter whether it was entered on the opening day of the
auction or at the last second. It's that simple folks....

I use them all.

dead of night wrote:

I do that when I know the station, usually a favorite like Radio
Australia in the morning.

>
> 2. Scanning quickly through each meter band.

Yup, I do that too. In fact that reminds me of my first exciting
"catch" as a new owner of a Sony 2010 20 years ago. I was tuning
through the 6mhz band not really knowing what to listen for and came
across what seemed like an exotic and fascinating catch. Radio South
Africa was broadcasting a program for shortwave listenters. I later
found out it was no big deal, but I still remember the excitement.

>
> 3. Looking at a list of broadcast times and stations for your area that
> someone has put together and directly putting these frequencies in.

By far the best resource for frequencies is the monthly Monitoring
Times http://www.monitoringtimes.com/ They feature a TV Guide-like
listing of shortwave broadcasters by time and frequency as well as
several well written articles. I've enjoyed that magazine for almost
as long as I've been in the hobby.

>
> How do you do it?

Welcome to the hobby and enjoy that radio.

If it was sealed bids, then you would be correct. However, if you place
a bid way in advance of the auction, people will nibble at it and
eventually just slightly beat your bid. Surely you have noticed all the
action happens in the last few minutes.

Narrow band signal have less fading, thus sync demod will have less
fading. However, the result isn't all that significant since all you
have done is cut the bandwidth in half.

>
> So there's fading on the incoming signal. That means the amplitude of

With an envelope detector, the carrier isn't beating down the sideband.
If you just look at the math of AM modulation, you would see that the
carrier is just there for the ride.

Steve,

I was in the shop a couple of weeks ago buying an ICOM 703 - they are very much in business - nice guy too. I asked him about the website and he said that it was on the list of 'things to do'. Their most important task, he told me, was to set a computerised inventory system as the previous owner did it all by paper.

I got the impression that the two guys now running the business knew the previous owner who has now retired.

If you are looking for anything in particular just give them a ring, I found them really helpful and friendly.

Charlie.

With analog tuners, does tunig off the main carrier, a bit, get one
into the sidebands, and if so, are there any advantages to analog
tuners ?

Thanks

Now that wasn't such a good idea - I would keep this set for looks
alone. I remember someone mentioning the shortwave sections to be a bit
problematic in terms of successful realignment (probably aging issues)
but can't find that right now. Anyway, here's what I know in terms of
pages on the RF-1150:
http://www.noobowsystems.com/restorations/rf-1150/rf-1150-e.html
http://www.radiointel.com/review-panasonicrf1150.htm

> I bught a Grundig Yachtboy......what a pieve of crap....I'm lucky to

> reception power of the 30 year old Panasonic....

Which model would that be, the YB400PE? It's possible that you got a bad
apple (maybe a blown RF amp FET or something), but due to varying
conditions one can only tell side by side with a known-good radio.

> Maybe i can snag one off of ebay...

That wouldn't be that bad an idea, with that huge speaker and rotating
ferrite antenna it certainly is a fun set for AMBCB, not to mention the
retro looks. Alternatively, take a look at the Kaito KA2100 - which is
not to say that one couldn't have both. ;)

That's a perfect example of someone who doesn't really know what they
are willing to pay for an item. If you really felt that the Sony
CRF320 was only worth $300.00 then why would you care if someone was
willing to pay $305.00 People who snipe are a sellers dream come true
- they will chase an item up at the last minute just to be the winning
bidder.

Yup, that's a nice looking radio - came close to buying one a couple of
times. Reminds me vaguely of the Sony ICF5900, which was a fun radio
to use.

Why? The Grundig S800 is a legendary radio, the S350 can't be beat for the price, and RedSun 2100 is getting great reviews also. Sounds like you have something against the Chinese.

Sniping, AFAIK, is the ONLY way to win something you really want. It
does not happen in 1/1000 of a second, that's impossible on the web.
If you want something sign up at one of the various sniping sites, it's
like $10.00 a year, at least a while back it was!

>cuhulin
Wishful thinking. The best you can hope ful is to place a bid in the
final second, and even that is iffy. The Internet is a strange beast
in that all you are assured of is the message you put in at point A
will arrive at point B. There is no assurance that if you put the
message into two seperate packets that both packets will take the same
route from A to B, I.E. there are inherent, and unreliable delays
associated with the internet. The different in transit time of two
packets from A to B may in fact be seconds, although it is more likely
to be measured in milliseconds. All Sniping does is try to make your
bid as close to the auction closing as possible.

The uncertaintly in how message propogate across the Internet means
that any effort to get closer than about 1 second to the actual bid
closing time means a high risk of the bid arriving AFTER the auction
has already closed.

User can do almost as well on their own by assuming about a 1 second
propogation time over broad band, and using a clock like NIST32 to
decice when to click on the confirm radio button. With that you can
relibly get to within a second or two of the closing time.

That divorced forty five year old woman that moved in next door to me a couple of weeks ago,she owns a seven months old dog.She said the dog is part Rottweiler,part Sheapard,and part (whatever it is) It is a large dog and she keeps the dog tied to a tree in her back yard.There is a plastic dog house over there that I gave to the divorced Bell South woman when she used to live over there,but the dog house is really to small for her dog.I don't know why she won't go to the Quality Pet pet store the next street over from me and buy a proper dog house for her big dog.She said she has a large dog house in Springfield,Missouri and when she goes back to Springfield she will bring her big dog house back to Jackson.I told her,You don't want to be in Springfield right now.She said,Oh I know that!

Has anyone reported a station broadcasting here? Clandestine ?

I have a loud station here that is drifting up the band. Began
listening at 22:20 & its has drifted up 600 cycles by 22:55 utc.

Unknow lang?

Any help.

Again, big signal .10 -15 over s9.

Snipers are a sellers worst nightmare. You can't have a frenzy if
everyone snipes, because you didn't see the other bids.

YES FOLKS, ANOTHER SATISFIED CUSTOMER COMES FORWARD
WITH YET ANOTHER "TRUE OWNERSHIP EXPERIENCE" OF CHINESE
MADE RADIO JUNK.

YES SIR-REE! YOU HAVE GOT TO LOVE THOSE CHINESE RADIOS.

WHERE ELSE IN THE WORLD BUT CHINA CAN YOU GET:

STRIPPED SCREWS HOLDING THE COVERS IN PLACE, CHEAP LEAD
BASED PAINT POWDERCOATING SPRAYED OVER THE CHEAPEST PLASTIC
POLYMER BASED CASES AVAILABLE, COUNTERFEIT COPIES OF IC
CHIPS, ELECTROLYTIC CAPACITORS THAT GO DRY AND FAIL WITHIN
ONE YEAR UNDER POWER, TECHNICAL MANUALS THAT READ IN CHINGLISH
LIKE THEY WERE WRITTEN BY A COMPLETE RETARD, KNOBS THAT
FALL OFF OR THE SHAFTS CRACK OR ARE HELD IN PLACE WITH
HOT MELT GLUE OR WAX OR MASKING TAPE, SHARP EDGES INSIDE
THAT WILL CUT LIKE DADDY'S OLD GILLETE RAZOR, POWER CORDS THAT
SMELL LIKE A CHEMICAL FACTORY...AND FINALLY THE EVER-PRESENT
KOOKY BRAND NAMES THEY COME UP WITH.

(Then you folks wonder why these piecess of CRAP sell for so little
money - go figure round eye! PFHBBLTTTT!!!!)
